**ATTACHMENT 10: LETTER – DRAINAGE MANHOLE BEARING CAPACITY FOR PROPOSED SHUSTER BULKHEAD (CIVIL & ENVIRONMENTAL CONSULTANTS, INC., OCTOBER 1, 2025)**

October 1, 2025

Mr. Doug Ernst, P.E.
Foth Infrastructure & Environment, LLC
8191 Birchwood Court, Suite L
Johnston, IA 50131

Subject: Drainage Manhole Bearing Capacity Letter
Proposed Shuster Bulkhead
4 Wright Street, New Bedford, Massachusetts 02740
CEC Project 332-344

Dear Mr. Ernst:

Civil & Environmental Consultants, Inc. (CEC) has prepared this letter to provide an allowable bearing capacity recommendation for a proposed drainage manhole structure supported on existing soil immediately adjacent to the proposed Shuster Bulkhead. This letter was prepared based on an email exchange on September 22, 2025 between Mr. Tony Sousa of CEC and Mr. Doug Ernst, Mr. Thomas Ciha and Mr. Christoper Pfrommer, all with Foth Infrastructure & Environment, LLC (Foth).

In the e mail exchange, the location of the proposed manhole was provided as well as drawings depicting the proposed manhole. Based on the correspondence and our review of the provided drawings, the following information was utilized to perform the bearing capacity analysis:

- Maximum allowable total settlement: 1 inch
- Elevation at the bottom of the structure: - 3 feet
- Total bearing area of the manhole is 9 feet by 11 feet.
- The area around the manhole will be subjected to HS-40 loading.

To perform the analysis and develop the bearing capacity recommendation, CEC utilized subsurface data provided in the report titled “Geotechnical Data Report” for the proposed Shuster Bulkhead, prepared by CEC dated November 13, 2024, revised April 4, 2025. Boring CEC-14A from the report was identified as the closest and most representative boring relative to the location of the proposed manhole structure. Subsurface conditions at this boring location consisted of loose to very dense sandy fill from the ground surface to El. -5 feet, underlain by about 4 feet of loose to medium dense silty glacial outwash, in turn underlain by dense glacial till soils and bedrock.

Mr. Doug Ernst, P.E. - Foth Infrastructure & Environment, LLC
CEC Project 332-344
October 1, 2025

Based on the information provided to us by Foth and the anticipated subsurface conditions, CEC recommends using a net allowable bearing capacity of 3,000 pounds per square foot (psf) for design of the manhole structure. CEC can provide more detailed recommendations for earthwork construction and subgrade preparation if requested by Foth. In addition, if design of the manhole is changed such that the information used to perform the bearing capacity analysis is no longer valid, CEC should be contacted to revise our recommendations accordingly.

CEC appreciates the opportunity to be of service to you on this project. Please call Tony Sousa at (774) 409 2640 if you have any questions or comments.

Sincerely,

CIVIL & ENVIRONMENTAL CONSULTANTS, INC.

Amanda Bucco, EIT
Staff Consultant

Antonio E. Sousa, P.E.
Project Manager

**ATTACHMENT 11: PROJECT MEMORANDUM - PRELIMINARY SOIL INVESTIGATION FOR SHUSTER BULKHEAD (CIVIL & ENVIRONMENTAL CONSULTANTS, INC., MARCH 8, 2024)**

# PROJECT MEMORANDUM

To: Tim Griffin, Massachusetts Clean Energy Center

From: Jon Kitchen

Date: March 8, 2024

Subject: Preliminary Soil Investigation
Shuster Bulkhead – 4 Wright Street, New Bedford, Massachusetts
CEC Project 332-344

Dear Tim:

This memo documents the results of a Preliminary Soil Investigation conducted at the Shuster Bulkhead area of 4 Wright Street in New Bedford, Massachusetts in anticipation of future repair work. This memo was prepared by Civil & Environmental Consultants, Inc. (CEC) on behalf of the Massachusetts Clean Energy Center (MassCEC) through a subcontract with Foth infrastructure & Environment, LLC (Foth).

The purpose of this Preliminary Soil Investigation was to assess the environmental and geotechnical characteristics of the soils within three cofferdam sections at the Shuster Bulkhead. MassCEC plans to reconstruct the bulkhead at the site and requires soil characteristics for disposal and reuse purposes.

## Scope of Services

The specific activities that were conducted are outlined below:

- The advancement of soil borings with soil sample collection (to refusal or upon discovery of medium-dense material) at three locations across the site.
- The collection and field screening of soil samples to evaluate soil characteristics for environmental and geotechnical purposes, and to evaluate the implications of potential soil impacts for the reuse and/or disposal of the soils at the site.
- Environmental soil sample submission for the analysis of polychlorinated biphenyls (PCBs), Massachusetts Contingency Plan (MCP) metals, and semi-volatile organic compounds (SVOCs). The list of target analytes was based upon those contaminants that have impacted that ability to dispose of soil from the MassCEC property in the past or are expected to have a high potential to impact disposal options.

- Geotechnical soil sample submission for the analyses of moisture content, grain size, and organic material analyses to evaluate the geotechnical characteristics of the soils.

**Background**

The MassDEP – Bureau of Waste Site Cleanup Phase 1 Site Assessment Map (attached) indicates that the Subject Properties are located adjacent to a Federal Emergency Management Agency (FEMA) 100-year Floodplain. The nearby Acushnet River is classified by the Natural Heritage & Endangered Species Program (NHESP) as a Priority Habitat of Rare Species. There are no public drinking water supply wells or drinking water resource areas within a ¼ mile of the Subject Property. The surrounding area consist of industrial/commercial properties associated with the fishing industry.

**Regulatory Reporting Criteria**

Measured concentrations of any oil or hazardous material in soil were compared to the applicable Reportable Concentrations (RCs) at the current location of the soil.

The Reportable Concentration Categories are generally described as follows:

Reporting Category RCS-1 is applied to all soil samples collected:

- Within 500 feet of a residential dwelling, residentially zoned area, school, playground, recreational area; or
- Within the geographic boundaries of a groundwater resource area.

Reporting Category RCS-2 is applied to all soil samples:

- That are not obtained from category RCS-1 areas.

For the purposes of this investigation, CEC has determined that RCS-2 criteria apply at this location since it is not within 500 feet of a residential dwelling, residentially zoned area, school, playground, recreational area, or within the geographic boundaries of a groundwater resource area.

**Subsurface Soil Investigation**

Table 1 (attached) is a Summary of Soil Data showing only analytes that were detected in at least one sample. Complete laboratory analytical reports are also attached.

Between November 15 & 16, 2023, CEC collected soil samples from three boring locations at the site, to environmentally characterize soil that may need to be managed during construction, and to assess the geotechnical characteristics of the soils for reuse purposes.
CEC subcontracted Geosearch, Inc. to advance boring locations with drilling equipment. The boring locations are shown on Figure 2, attached. Soil borings CEC-1-A, CEC-2-A, and CEC-3-A were advanced to depths between 29.2 feet and 31 feet below grade.

**Environmental**

A total of four soil samples were submitted at each soil boring location. Soil samples selected for laboratory analysis at each boring location were selected based on field observations, PID readings, and/or anticipated need for displacement during construction. All samples were placed into appropriate glassware and submitted to ESS Laboratories (ESS) of Cranston, Rhode Island. Samples were analyzed for parameters including PCBs, MCP Metals, and SVOCs. All soil samples submitted for analysis were below the applicable MassDEP RCS-2 Reportable Concentrations.

**Geotechnical**

The following geotechnical laboratory tests were performed on select samples obtained during the drilling program:

- Moisture content in accordance with ASTM D2216 “Determination of Water Content of Soil and Rock by Mass”;
- Grain size analysis in accordance with ASTM D6913 “Particle-Size Distribution of Soils Using Sieve Analysis”; and
- Organic material analysis in accordance with ASTM D2974 “Determination of Water Content, Ash Content, and Organic Material of Peat and Other Organic Soils”.

The moisture content, percent fines (percent passing the #200 sieve), and organic content are shown on the boring logs attached and the full geotechnical laboratory test results, also attached.

**Conclusion**

Concentrations of PCBs, SVOCs, and metals in soil were all below the RCS-1 and RCS-2 reportable concentrations at the site, except for one sample (CEC-2-A 26-28). At CEC-2-A, the total PCB concentration was detected at a concentration of 1.1 mg/kg, which exceeds the applicable RCS-1 concentration of 1 mg/kg; however, soil at this location is not categorized as RCS-1. Therefore, concentrations triggering a 120-day Reportable Condition to Massachusetts

Department of Environmental Protection (MassDEP) per 310 CMR 40.0315 of the Massachusetts Contingency Plan (MCP) do not exist.

For disposal purposes, all soils may have the potential to be reused at a < RCS-1 soil reclamation facility, except soils from boring location CEC-2-A. Additionally, all soils may have the potential to be reused at a < RCS-2 soil reclamation facility, and a lined or unlined landfill; however, requirements vary at each facility based upon permits and future sampling and evaluation would be required. Further investigations, including additional soil sampling and analysis for additional analytical parameters, are necessary to accurately characterize and quantify the soils across the site that may require management during future construction.

For geotechnical purposes, it appears that most of the soil material has re-use potential due to the material being sandy without a high number of fines (generally less than 10 percent). However, the gravel content is relatively low, so the soils may be used for general purpose backfill but not as heavy lift fill or base course fill directly below pavements. In addition, most of the soil material is below groundwater which may lead to increased time for the soils to dry out properly if re-use as backfill is expected for future development of the site. Additional geotechnical sampling is required to fully characterize the soils prior to re-use.

## Limitations

This report presents CEC's field observations and results as they existed on the dates of the Limited Subsurface Investigation activities. Environmental evaluations and conclusions are inherently limited as environmental conditions change with time. Conclusions are drawn from information obtained during CEC's evaluation as they existed on the date of the site sampling. Conditions inferred to exist between sampling points may differ significantly from the conditions that actually exist there. The activities documented herein were intended to evaluate whether specific impacts were present at the site and did not necessarily meet regulatory guidelines, as may be required of the party responsible for the impact. Therefore, it should be recognized that alternate and/or more rigorous assessment methods may produce different results.

Chemical data presented herein are applicable to the location, time of sample collection, and the parameters analyzed. Chemical conditions may change with time. Reported conditions may not represent current or future conditions. Chemical concentrations between sampling points may differ.

The conclusions expressed herein have been developed as a result of site assessment, field observations, and research by Civil & Environmental Consultants, Inc. (CEC) personnel. CEC

makes no claims or representations (implicit or explicit) as to the completeness or accuracy of information or data developed and provided by others.

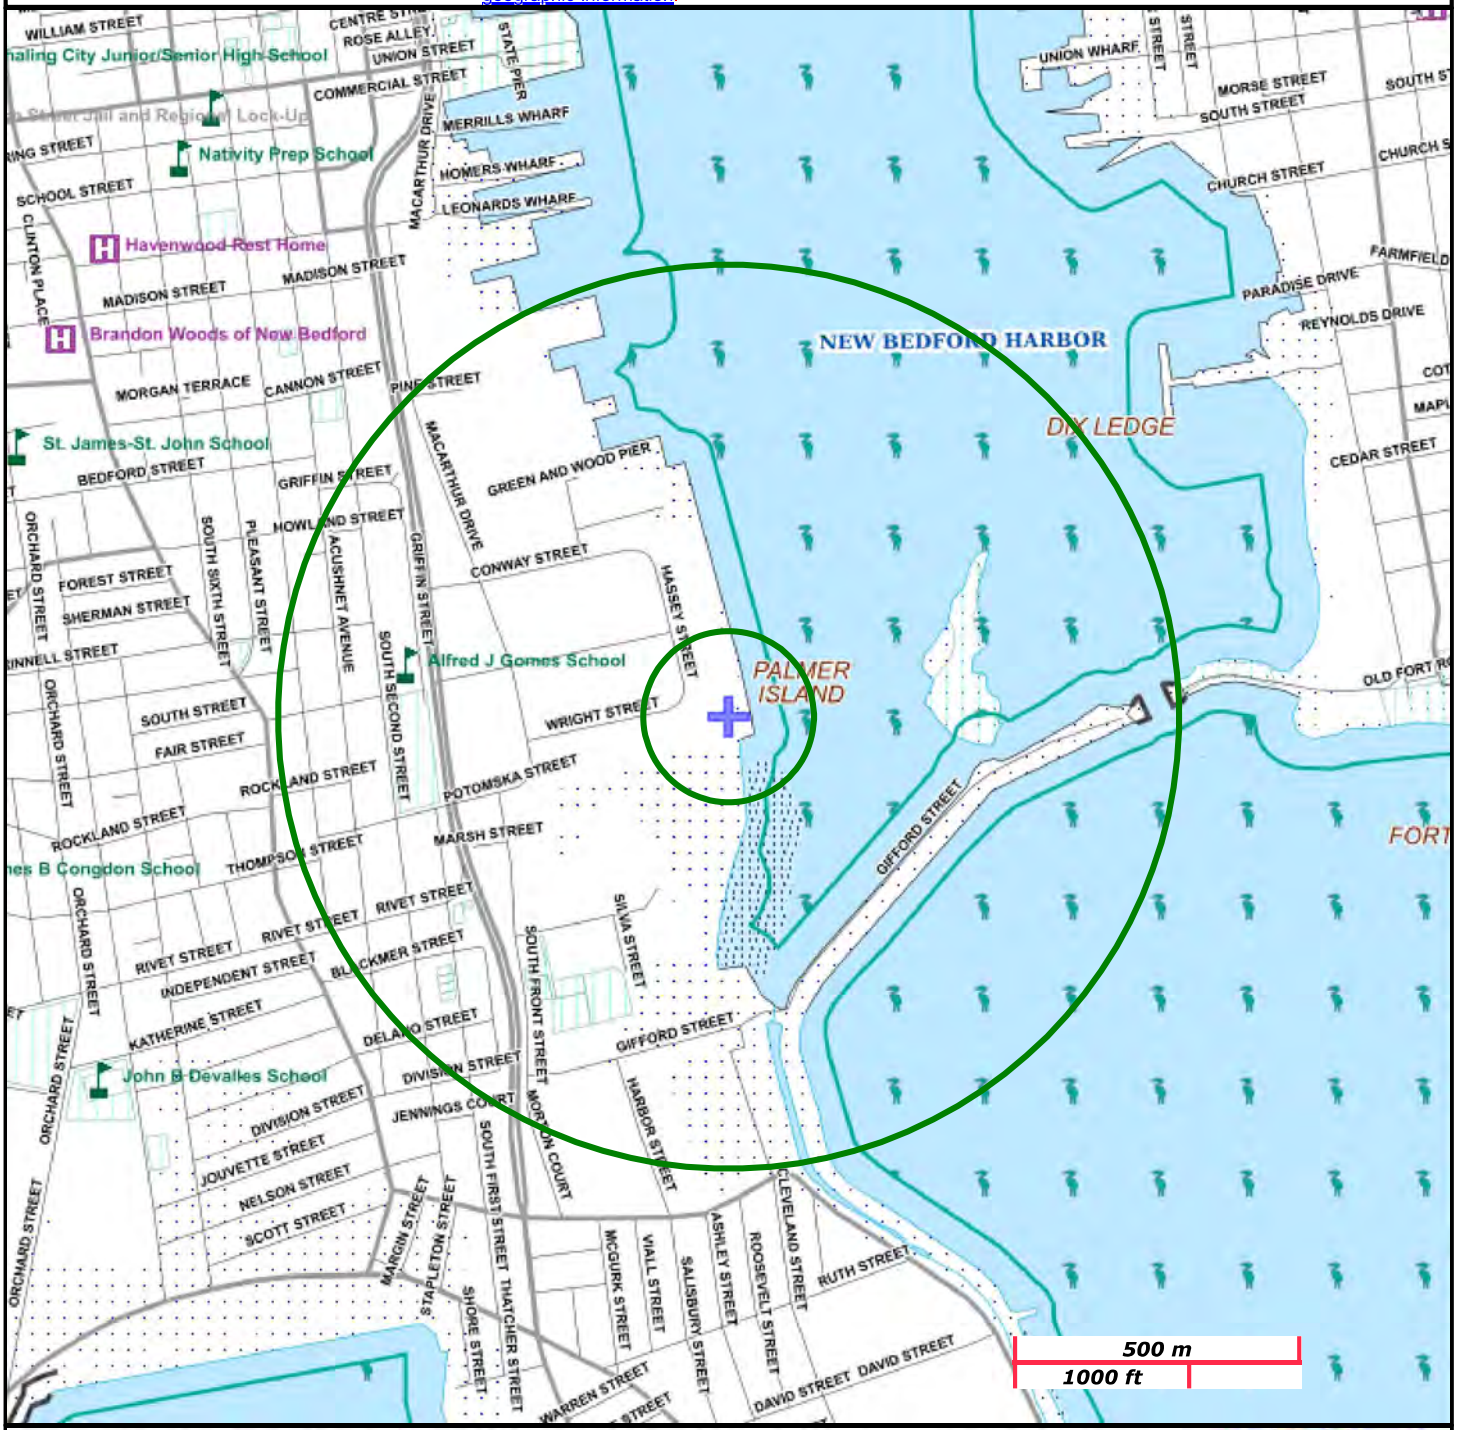
Notes:
Laboratory analytical results compared to RCS-2 Massachusetts Contingency Plan Reportable Concentrations
Table shows only detected analytes
PCBs = Polychlorinated Biphenyls;
PID = photo ionization detector; ppmv = parts per million volumetric;
All data reported in mg/kg = milligrams per kilogram.
< = not detected above laboratory reporting limit
-- = Not Tested
NS = No Standard
**Bold** = exceeds applicable MassDEP MCP Standard RCS-2
PID calibrated with Isobutylene with a Response Factor of 1.0
Reuse levels based on Massachusetts Department of Environmental Protection's "Reuse and Disposal of Contaminated Soil at Massachusetts Landfills Department of Environmental Protection Policy # Comm-97-001"

**MASSDEP PHASE I SITE ASSESSMENT MAP**

# MassDEP - Bureau of Waste Site Cleanup



## Phase 1 Site Assessment Map: 500 feet & 0.5 Mile Radii

**Site Information:**
SHUSTER BULKHEAD - 4 WRIGHT STREET
4 WRIGHT STREET NEW BEDFORD, MA

NAD83 UTM Meters:
4609827mN , 340468mE (Zone: 19)
February 22, 2024

The information shown is the best available at the date of printing. However, it may be incomplete. The responsible party and LSP are ultimately responsible for ascertaining the true conditions surrounding the site. Metadata for data layers shown on this map can be found at: https://www.mass.gov/orgs/massgis-bureau-of-geographic-information.

MassDEP
Commonwealth of Massachusetts
Department of Environmental Protection

Roads: Limited Access, Divided, Other Hwy, Major Road, Minor Road, Track, Trail

Boundaries: Town, County, DEP Region; Train; Powerline; Pipeline; Aqueduct

Basins: Major, PWS; Streams: Perennial, Intermittent, Man Made Shore, Dam

Aquifers: Medium Yield, High Yield, EPA Sole Source

Non Potential Drinking Water Source Area: Medium, High (Yield)

PWS Protection Areas: Zone II, IWPA, Zone A

Hydrography: Open Water, PWS Reservoir, Tidal Flat

Wetlands: Freshwater, Saltwater, Cranberry Bog

FEMA 100yr Floodplain; Protected Open Space; ACEC

NHESP Pri-Hab of Rare Species; Vernal Pool: Cert., Potential

Solid Waste Landfill; PWS: Com.GW,SW, Emerg., Non-Com.

**BORING LOGS**

# Rock Types

| Rock Name | Characteristics | Symbol |
|---|---|---|
| Claystone | Clay sized particles that are consolidated, lacking fissility. | |
| Coal | Black and shiny, can break into cubes or conchoidally. | |
| Conglomerate | Gravel sized grains and larger held together by finer material, called a breccia if clasts are angular. | |
| Limestone | Effervesses w/ diluted HCl, can be composed of clay up to gravel particles (fossils). | |
| Sandstone | Primarily sand sized particles modified w/ the descriptor fine, medium, or coarse. | |
| Shale | Clay sized particles, shale has fissility which is a horizontal sheet-like or laminated feature. | |
| Siltstone | Composed of silt, normally breaks as irregular chunks. | |

# Rock Quality Descriptions

## Weathering

**Completely Weathered:** All rock material is decomposed and/or disintegrated. The original rock structure may still be intact.

**Highly Weathered:** More than half of the rock material is decomposed. Fresh rock is present only as a discontinuous framework or as corestones.

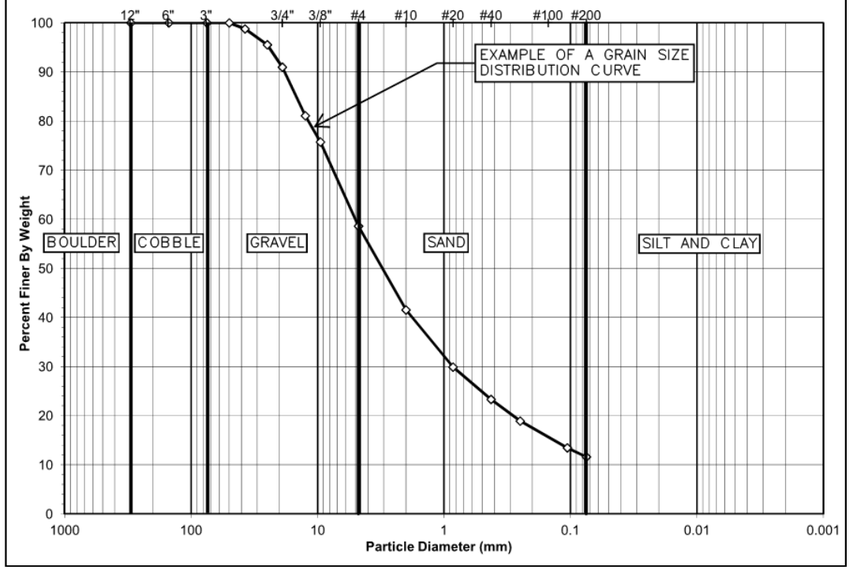
**Moderately Weathered:** Less than half of the rock material is decomposed. Fresh rock is present at a discontinuous framework or as corestones.

**Slightly Weathered:** Discoloration or staining indicates weathering of rock material on discontinuity surfaces. Rock may be discolored and softened.

**Fresh:** No visible signs of rock material weathering.

## RQD

| Descriptor | % |
|---|---|
| Very Poor | <25 |
| Poor | 25-50 |
| Fair | 50-75 |
| Good | 75-90 |
| Excellent | >90 |



## Brokenness

| Descriptor | Fracture Spacing (in & ft) |
|---|---|
| Very Broken | <1 (<0.08) |
| Broken | 1-3 (0.08-0.25) |
| Moderately Broken | 3-6 (0.25-0.5) |
| Slightly Broken | >6 (>0.5) |

## Rock Hardness

| Descriptor | Field Criterion | Relative Unconfined Compressive Strength |
|---|---|---|
| Very Hard | Difficult to break w/ Hammer | > 30,000 psi |
| Hard | Hand-held sample breaks w/ Hammer | 8,000 to 30,000 psi |
| Medium Hard | Cannot scrape surface w/ knife | 2,000 to 8,000 psi |
| Soft | Cutting or scraping w/ knife difficult | 500 to 2,000 psi |
| Very Soft | Can be cut w/ knife | < 500 psi |

# Grain Size Distribution Curve

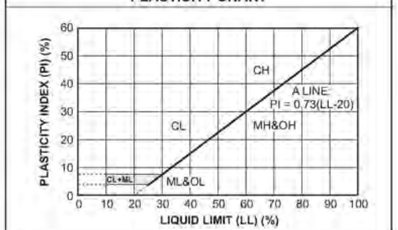
## UNIFIED SOIL CLASSIFICATION AND SYMBOL CHART

COARSE-GRAINED SOILS
(more than 50% of material is larger than No. 200 sieve size.)

| | | | |
|---|---|---|---|
| GRAVELS More than 50% of coarse fraction larger than No. 4 sieve size | Clean Gravels (Less than 5% fines) | GW | Well-graded gravels, gravel-sand mixtures, little or no fines |
| | | GP | Poorly-graded gravels, gravel-sand mixtures, little or no fines |
| | Gravels with fines (More than 12% fines) | GM | Silty gravels, gravel-sand-silt mixtures |
| | | GC | Clayey gravels, gravel-sand-clay mixtures |
| SANDS 50% or more of coarse fraction smaller than No. 4 sieve size | Clean Sands (Less than 5% fines) | SW | Well-graded sands, gravelly sands, little or no fines |
| | | SP | Poorly graded sands, gravelly sands, little or no fines |
| | Sands with fines (More than 12% fines) | SM | Silty sands, sand-silt mixtures |
| | | SC | Clayey sands, sand-clay mixtures |

FINE-GRAINED SOILS
(50% or more of material is smaller than No. 200 sieve size.)

| | | | |
|---|---|---|---|
| SILTS AND CLAYS Liquid limit less than 50% | | ML | Inorganic silts and very fine sands, rock flour, silty of clayey fine sands or clayey silts with slight plasticity |
| | | CL | Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays |
| | | OL | Organic silts and organic silty clays of low plasticity |
| SILTS AND CLAYS Liquid limit 50% or greater | | MH | Inorganic silts, micaceous or diatomaceous fine sandy or silty soils, elastic silts |
| | | CH | Inorganic clays of high plasticity, fat clays |
| | | OH | Organic clays of medium to high plasticity, organic silts |
| HIGHLY ORGANIC SOILS | | PT | Peat and other highly organic soils |



## LABORATORY CLASSIFICATION CRITERIA

| | | |
|---|---|---|
| GW | $C_u = \frac{D_{60}}{D_{10}}$ greater than 4; $C_c = \frac{D_{30}}{D_{10} \times D_{60}}$ between 1 and 3 | |
| GP | Not meeting all gradation requirements for GW | |
| GM | Atterberg limits below "A" line or P.I. less than 4 | Above "A" line with P.I. between 4 and 7 are borderline cases requiring use of dual symbols |
| GC | Atterberg limits above "A" line with P.I. greater than 7 | |
| SW | $C_u = \frac{D_{60}}{D_{10}}$ greater than 4; $C_c = \frac{D_{30}}{D_{10} \times D_{60}}$ between 1 and 3 | |
| SP | Not meeting all gradation requirements for GW | |
| SM | Atterberg limits below "A" line or P.I. less than 4 | Limits plotting in shaded zone with P.I. between 4 and 7 are borderline cases requiring use of dual symbols |
| SC | Atterberg limits above "A" line with P.I. greater than 7 | |

Determine percentages of sand and gravel from grain-size curve. Depending on percentage of fines (fraction smaller than No. 200 sieve size), coarse-grained soils are classified as follows:

| | |
|---|---|
| Less than 5 percent | GW, GP, SW, SP |
| More than 12 percent | GM, GC, SM, SC |
| 5 to 12 percent | Borderline cases requiring dual symbols |

## PLASTICITY CHART

# Glossary

**Alluvial Soil or Alluvium:** Soil deposited by water in a river, stream, floodplain, or delta.

**Bedrock:** Materials underlying soil or other unconsolidated surficial materials in which refusal is consistently encountered on lithified, undisturbed, natural bedrock.

**Colluvial Soil or Colluvium:** Incoherent soil on or at the base of a slope deposited by gravity or slope movement.

**Fill:** Soil derived from natural soil, rock, or processed materials that was placed by artificial methods, such as construction, waste disposal, or dumping.

**Glacial Outwash:** Soil, typically sand and gravel, deposited by glacial streams or meltwater in a preexisting valley or over a plain.

**Glacial Till:** Soil deposited by and underneath a glacier, generally consisting of a heterogeneous, unstratified mixture of clay, sand, gravel, and boulders.

**N-Value:** The blow count representation of the penetration resistance of the soil determined by the Standard Penetration Test (SPT). It is the sum of the number of blows required to drive the sampler the second and third 6-inch increments (sample depth interval of 6 to 18 inches) and is recorded in blows per foot (bpf). The N-value is considered to be an indication of the relative density of coarse-grained soils (sand and gravel) or consistency of fine-grained soils (silt and clay).

**Pocket Pen (PP):** Field penetration test performed using a hand-held penetrometer that estimates unconfined compressive strength of cohesive soil in tons per square foot (tsf).

**Recovery %:** Total length of rock core or soil sample retrieved divided by the total length of the core run or sample interval, expressed as a percentage.

**Refusal:** The depth at which greater than 50 SPT hammer blows are required to drive the sampling spoon 6 inches or less.

**Residual Soil or Residuum:** Soil derived from the physical or chemical weathering of the underlying parent bedrock, generally with N-values less than 30 and 50 bpf in cohesive and cohesionless materials, respectively.

**Rock Quality Designation (RQD):** The sum of the length of intact rock core pieces longer than 4 inches (excluding mechanical breaks) divided by the total length of the core run, expressed as a percentage.

**Shelby Tube:** A 2" to 3" diameter, thin walled sampling tube that is pushed into the soil to obtain a relatively undisturbed soil sample for geotechnical laboratory tests.

**Split Spoon Sampler:** A soil sampling tube which is driven, retrieved, and split-open lengthwise for removal and visual inspection, and testing of the soil obtained.

**Standard Penetration Test (SPT) ASTM D1586 :** Field penetration test consisting of driving a 2-inch outside diameter split-spoon sampler 18 inches using a 140-pound hammer free falling a distance of 30 inches. The number of blows required to advance the spoon through successive 6-inch increments is recorded to determine the N-value.

**Weathered Rock:** Materials derived from lithified, undisturbed, natural bedrock which are able to be sampled with a split-spoon. Cohesive and cohesionless materials generally have N-values greater than 30 and 50 bpf, respectively.

# N-Value Rating

### Fine-Grained Soils (Silt and Clay)

| Consistency | Blows/ft | PP (tsf) |
|---|---|---|
| Very Soft | 0-2 | <0.25 |
| Soft | 3-4 | 0.25-0.5 |
| Medium Stiff | 5-8 | 0.5-1 |
| Stiff | 9-15 | 1-2 |
| Very Stiff | 16-32 | 2-4 |
| Hard | >32 | >4 |

### Coarse-Grained Soils (Sand and Gravel)

| Relative Density | Blows/ft |
|---|---|
| Very Loose | 0-4 |
| Loose | 5-10 |
| Medium Dense | 11-30 |
| Dense | 31-50 |
| Very Dense | >50 |

# Unconsolidated Material

| Term | Grain Size in mm (in) | Approximate Example Size |
|---|---|---|
| Clay and Silt | <.075 | can't see grains to barely visible |
| Fine Sand | 0.075-0.4 | table salt to sugar |
| Med. Sand | 0.4-2.0 (~<1/16) | openings in a window screen |
| Coarse Sand | 2.0-4.75 (~1/16-1/8) | sidewalk salt |
| Gravel | 4.75-75 (~1/8-3) | pea to tennis ball |
| Cobble | 75-300 (3-12) | tennis ball to basketball |
| Boulder | >300 (>12) | larger than a basketball |

**Other Features** – Used to describe other identifiable, pertinent features (e.g., angularity of coarse-grained soils, organics, construction debris, etc.)

| Term | % |
|---|---|
| Trace | < 5 |
| Few | 5-15 |
| Some | 15-45 |

**Moisture Content**
Dry: Sample is dusty or obviously dry.
Moist: Anything that does not fit the definition of dry or wet.
Wet: Sample contains free water.

Raynham, MA 02767

**RE: MassCEC - New Bedford (332-344)**
**ESS Laboratory Work Order Number: 23K0532**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

**REVIEWED**
**By ESS Laboratory at 3:05 pm, Nov 22, 2023**

**Analytical Summary**
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

## SAMPLE RECEIPT

The following samples were received on November 16, 2023 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been performed and achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Limit Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

| Lab Number | Sample Name | Matrix | Analysis |
|---|---|---|---|

## CURRENT SW-846 METHODOLOGY VERSIONS

### Analytical Methods

1010A - Flashpoint
6010C - ICP
6020A - ICP MS
7010 - Graphite Furnace
7196A - Hexavalent Chromium
7470A - Aqueous Mercury
7471B - Solid Mercury
8011 - EDB/DBCP/TCP
8015C - GRO/DRO
8081B - Pesticides
8082A - PCB
8100M - TPH
8151A - Herbicides
8260B - VOA
8270D - SVOA
8270D SIM - SVOA Low Level
9014 - Cyanide
9038 - Sulfate
9040C - Aqueous pH
9045D - Solid pH (Corrosivity)
9050A - Specific Conductance
9056A - Anions (IC)
9060A - TOC
9095B - Paint Filter
MADEP 04-1.1 - EPH
MADEP 18-2.1 - VPH

### Prep Methods

3005A - Aqueous ICP Digestion
3020A - Aqueous Graphite Furnace / ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3541 - Automated Soxhlet Extraction
3546 - Microwave Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5030C - Aqueous Purge and Trap
5035A - Solid Purge and Trap

SW846 Reactivity Methods 7.3.3.2 (Reactive Cyanide) and 7.3.4.1 (Reactive Sulfide) have been withdrawn by EPA. These methods are reported per client request and are not NELAP accredited.

## MassDEP Analytical Protocol Certification Form

MADEP RTN: _____

This form provides certification for the following data set: **23K0532-01 through 23K0532-12**

Matrices: ( ) Ground Water/Surface Water (x) Soil/Sediment ( ) Drinking Water ( ) Air ( ) Other:_____

**CAM Protocol** (check all that apply below):

| | | | | | |
|---|---|---|---|---|---|
| ( ) 8260 VOC CAM II A | (x) 7470/7471 Hg CAM III B | ( ) MassDEP VPH (GC/PID/FID) CAM IV A | (x) 8082 PCB CAM V A | ( ) 9014 Total Cyanide/PAC CAM VI A | ( ) 6860 Perchlorate CAM VIII B |
| (x) 8270 SVOC CAM II B | ( ) 7010 Metals CAM III C | ( ) MassDEP VPH (GC/MS) CAM IV C | ( ) 8081 Pesticides CAM V B | ( ) 7196 Hex Cr CAM VI B | ( ) MassDEP APH CAM IX A |
| (x) 6010 Metals CAM III A | ( ) 6020 Metals CAM III D | ( ) MassDEP EPH CAM IV B | ( ) 8151 Herbicides CAM V C | ( ) Explosives CAM VIII A | ( ) TO-15 VOC CAM IX B |

***Affirmative responses to questions A through F are required for "Presumptive Certainty" status***

| | | |
|---|---|---|
| A | Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times? | Yes (x) No ( ) |
| B | Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed? | Yes (x) No ( ) |
| C | Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances? | Yes (x) No ( ) |
| D | Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"? | Yes (x) No ( ) |
| E | VPH, EPH, APH and TO-15 only: a. Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications). | Yes ( ) No ( ) |
| | b. APH and TO-15 Methods only: Was the complete analyte list reported for each method? | Yes ( ) No ( ) |
| F | Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)? | Yes (x) No ( ) |

***Responses to Questions G, H and I below are required for '"Presumptive Certainty" status***

| | | |
|---|---|---|
| G | Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)? | Yes (x) No ( )* |
| | ***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.** | |
| H | Were **all** QC performance standards specified in the CAM protocol(s) achieved? | Yes ( ) No (x)* |
| I | Were results reported for the complete analyte list specified in the selected CAM protocol(s)? | Yes (x) No ( )* |

****All negative responses must be addressed in an attached laboratory narrative.***

***I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.***

*CERTIFICATE OF ANALYSIS*

Client Name: Civil & Environmental Consultants, Inc.
Client Project ID: MassCEC - New Bedford ESS Laboratory Work Order: 23K0532

**Notes and Definitions**

| | |
|---|---|
| U | Analyte included in the analysis, but not detected |
| Q | Calibration required quadratic regression (Q). |
| D | Diluted. |
| CD+ | Continuing Calibration %Diff/Drift is above control limit (CD+). |
| ND | Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes |
| dry | Sample results reported on a dry weight basis |
| RPD | Relative Percent Difference |
| MDL | Method Detection Limit |
| MRL | Method Reporting Limit |
| LOD | Limit of Detection |
| LOQ | Limit of Quantitation |
| DL | Detection Limit |
| I/V | Initial Volume |
| F/V | Final Volume |
| § | Subcontracted analysis; see attached report |
| 1 | Range result excludes concentrations of surrogates and/or internal standards eluting in that range. |
| 2 | Range result excludes concentrations of target analytes eluting in that range. |
| 3 | Range result excludes the concentration of the C9-C10 aromatic range. |
| Avg | Results reported as a mathematical average. |
| NR | No Recovery |
| [CALC] | Calculated Analyte |
| SUB | Subcontracted analysis; see attached report |
| RL | Reporting Limit |
| EDL | Estimated Detection Limit |
| MF | Membrane Filtration |
| MPN | Most Probable Number |
| TNTC | Too numerous to Count |
| CFU | Colony Forming Units |

# ESS Laboratory Sample and Cooler Receipt Checklist

Client: CEC - Civil & Envtal Consultants - TB

Shipped/Delivered Via: ESS Courier

ESS Project ID: 23K0532
Date Received: 11/16/2023
Project Due Date: 11/22/2023
Days for Project: 4 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 2.9 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** (Yes) / No / NA
10. Were any analyses received outside of hold time? Yes / (No)

11. Any Subcontracting needed? Yes / (No)
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? Yes / (No)
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? Yes / No / NA

13. Are the samples properly preserved? (Yes) / No
    a. If metals preserved upon receipt: Date: _____ Time: _____ By/Acid Lot#: _____
    b. Low Level VOA vials frozen: Date: _____ Time: _____ By: _____

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / (No)
    a. Was there a need to contact the client? Yes / No
    Who was contacted? _____ Date: _____ Time: _____ By: _____

Resolution:

| Sample Number | Container ID | Proper Container | Air Bubbles Present | Sufficient Volume | Container Type | Preservative | Record pH (Cyanide and 608 Pesticides) |
|---|---|---|---|---|---|---|---|
| 1 | 494131 | Yes | N/A | Yes | 8 oz jar | NP | |
| 1 | 494740 | Yes | N/A | Yes | 8 oz jar | NP | |
| 2 | 494132 | Yes | N/A | Yes | 8 oz jar | NP | |
| 3 | 494133 | Yes | N/A | Yes | 8 oz jar | NP | |
| 4 | 494134 | Yes | N/A | Yes | 8 oz jar | NP | |
| 4 | 494741 | Yes | N/A | Yes | 8 oz jar | NP | |
| 5 | 494135 | Yes | N/A | Yes | 8 oz jar | NP | |
| 5 | 494742 | Yes | N/A | Yes | 8 oz jar | NP | |
| 6 | 494136 | Yes | N/A | Yes | 8 oz jar | NP | |
| 6 | 494743 | Yes | N/A | Yes | 8 oz jar | NP | |
| 7 | 494137 | Yes | N/A | Yes | 8 oz jar | NP | |
| 8 | 494138 | Yes | N/A | Yes | 8 oz jar | NP | |
| 9 | 494139 | Yes | N/A | Yes | 8 oz jar | NP | |
| 9 | 494744 | Yes | N/A | Yes | 8 oz jar | NP | |
| 10 | 494140 | Yes | N/A | Yes | 8 oz jar | NP | |
| 11 | 494141 | Yes | N/A | Yes | 8 oz jar | NP | |
| 12 | 494142 | Yes | N/A | Yes | 8 oz jar | NP | |

# ESS Laboratory Sample and Cooler Receipt Checklist

Client: CEC - Civil & Envtal Consultants - TB

ESS Project ID: 23K0532
Date Received: 11/16/2023

**2nd Review**
**Were all containers scanned into storage/lab?** Initials TJ
Are barcode labels on correct containers? Yes / No
Are all Flashpoint stickers attached/container ID # circled? Yes / No / NA
Are all Hex Chrome stickers attached? Yes / No / NA
Are all QC stickers attached? Yes / No / NA
Are VOA stickers attached if bubbles noted? Yes / No / NA

**ATTACHMENT 12: LETTER REPORT - SOIL CHARACTERIZATION FOR POTENTIAL DISPOSAL/REUSE FOR SHUSTER BULKHEAD (CIVIL & ENVIRONMENTAL CONSULTANTS, INC., AUGUST 14, 2024)**

August 14, 2024

Tim Griffin
Terminal Director
Massachusetts Clean Energy Center
4 Wright Street
New Bedford, MA 02740

Subject: Soil Characterization for Potential Disposal/Reuse
Shuster Bulkhead
4 Wright Street, New Bedford, MA 02740
CEC Project: 332-344

Dear Mr. Griffin,

Civil & Environmental Consultants, Inc. (CEC) is presenting this soil characterization summary letter for the soils to be removed from the Shuster Bulkhead. This work is scheduled to be conducted in 2025. This letter was prepared by Civil & Environmental Consultants, Inc. (CEC) on behalf of the Massachusetts Clean Energy Center (MassCEC) through a subcontract with Foth Infrastructure & Environment, LLC (Foth).

## Property/Project Information

The Shuster Bulkhead is a cofferdam constructed marine bulkhead that is connected to the MassCEC New Bedford Marine Commerce Terminal, which serves as a marine port for wind turbine parts. Due to structural concerns with the current bulkhead, MassCEC is evaluating the demolition and replacement of the existing bulkhead. The Shuster Bulkhead is approximately 0.5 acres in size, and the cofferdam structure contains approximately 9,750 cubic yards (cy) of infilled soils. To prepare for this future work, CEC was contracted to complete a soil waste characterization program to satisfy the requirements for soil disposal and/or reuse. As a contingency, CEC has collected samples at a frequency corresponding to a total disposal volume of up to 12,500 cy.

## Soil Sampling

In November 2023, CEC completed a preliminary subsurface investigation at the Shuster Bulkhead including the advancement of three soil borings (CEC-1A through CEC-3A) in the cofferdam sections of the bulkhead. The soil samples were field screened, and various samples were submitted to a laboratory for environmental analyses of polychlorinated biphenyls (PCBs)

(aroclors), Massachusetts Contingency Plan (MCP) metals, semi-volatile organic compounds (SVOCs), and grain size.

In May 2024, CEC advanced 10 additional borings (CEC-4A through CEC-13A) to characterize soils for disposal/reuse purposes. CEC performed the sampling using appropriate methods and techniques in accordance with the Environmental Sampling Plan prepared by CEC. CEC personnel collected samples from the 10 locations in the eastern section of the Shuster Bulkhead, as shown on Figure 1. In total, 24 waste characterization samples were submitted for analyses which corresponds with a minimum sampling density of roughly one sample per 500 cy. The samples were submitted for laboratory analysis for various parameters including total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), SVOCs (including pyridine), metals (including silver, arsenic, barium, cadmium, chromium (total), lead, selenium, and mercury), PCBs (aroclors), pesticides/herbicides (including toxaphene), sulfide and cyanide reactivity, flashpoint, conductivity, corrosivity (pH), grain size, and free liquid. Additionally, recognizing that PCB congeners (NOAA list) were required if the material was considered for Confined Aquatic Disposal (CAD) cell and offshore disposal, but at a lower sampling frequency, a separate composite sample representing each boring within the cofferdams was placed on hold in frozen storage for PCB congeners (one sample per boring location).

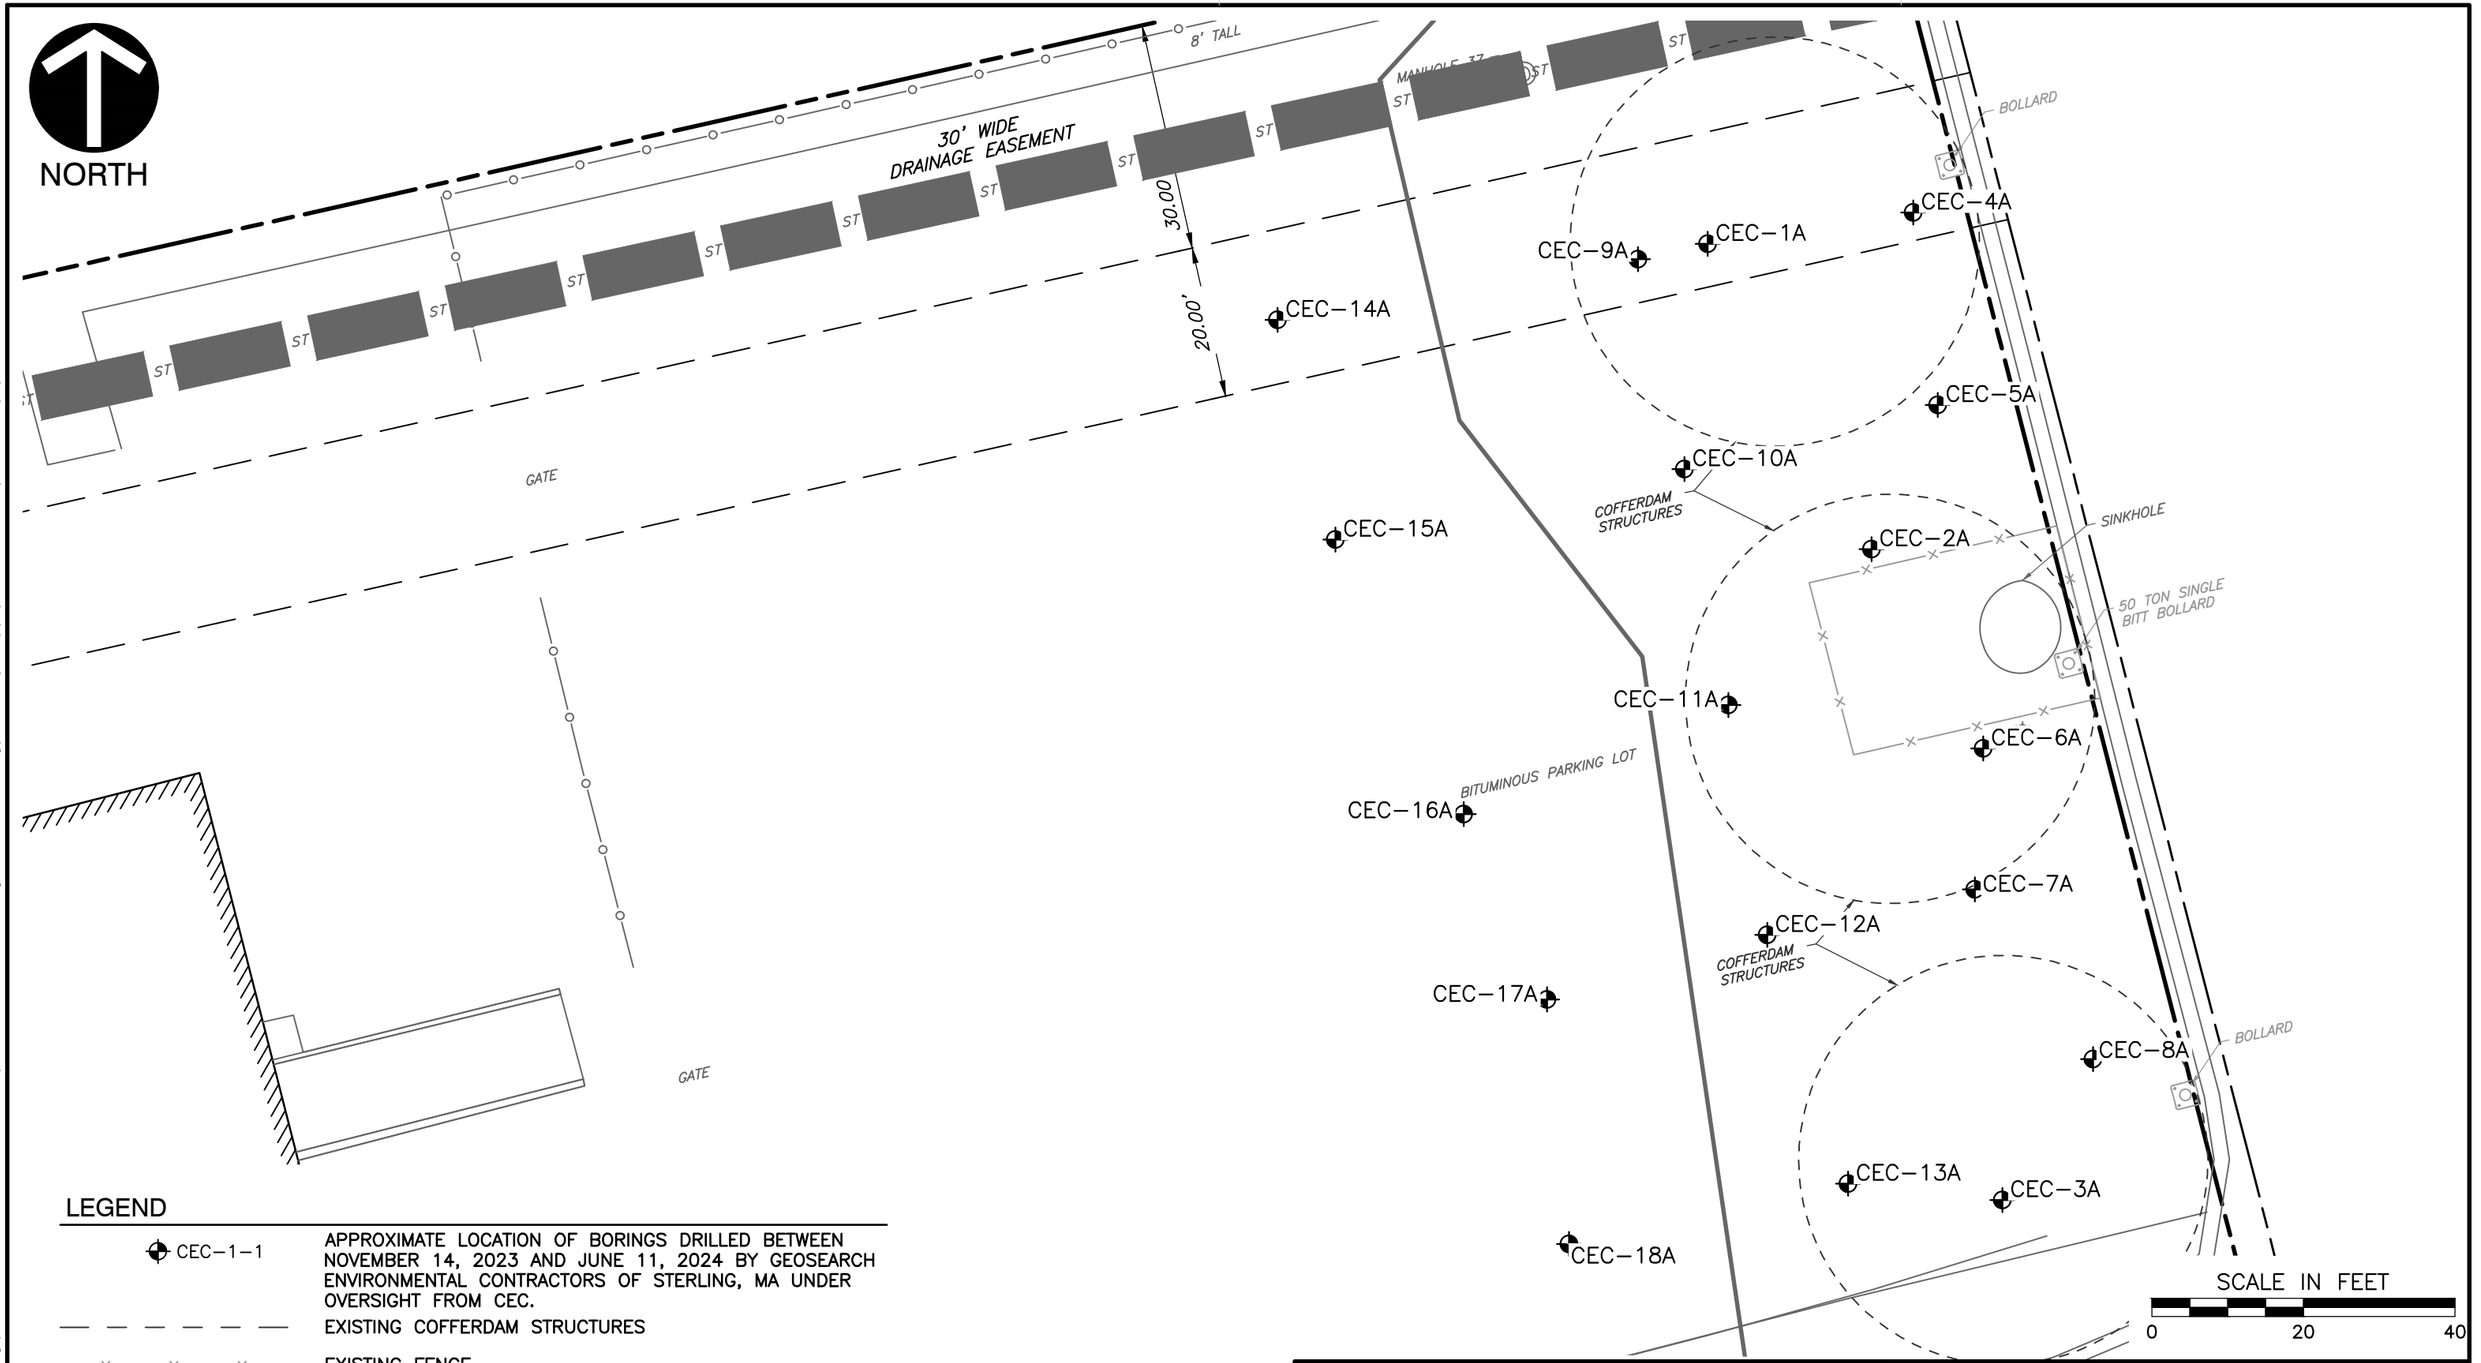
Laboratory results were compared to the Massachusetts Department of Environmental Protection (MassDEP) RCS-1 and RCS-2 reportable concentrations outlined within the MCP, as well as the reuse levels for soils outlined in COMM-97. The MassDEP RCS-2 reportable concentrations are the applicable standards for this site. Low concentrations of various heavy metals, TPH, VOCs, and PCBs were detected at multiple locations across the site, however, all results were below the RCS-2 reportable concentrations. It should be noted that one sample (CEC-2-A 24-26) exceeded the RCS-1 value of 1 mg/kg for PCBs, which is below the COMM-97 reuse criteria of 2 mg/kg total, however the RCS-1 reporting category is not applicable to the bulkhead location. No samples were submitted for Toxicity Characteristic Leaching Procedure (TCLP) analysis, due to all results for analyses being below the “rule of thumb” thresholds. Based on the laboratory results from the samples submitted and available historical information, the material is not considered a listed or characteristic RCRA Hazardous Waste. Sieve analyses were also performed on the soil samples. Sieve analysis results indicate the material consists of medium to fine sands, with varying amounts of silt and gravel. Results from the 2023 and 2024 sampling events are summarized in Tables 1 to 3. The laboratory reports and soil gradation reports are also enclosed for reference.

Site History/Possible Sources

The soils were placed within the cofferdam structure of the bulkhead during its construction. There is no known source of the contaminants, however, the concentrations of contaminants reported may be present due to historical industrial operations in the area, the somewhat ubiquitous presence of PCBs in the area of New Bedford Harbor, and unregulated infilling of the harbor throughout the years.

If you have any questions or need additional information, please feel free to contact either of the undersigned.

Sincerely,



CIVIL & ENVIRONMENTAL CONSULTANTS, INC.

Cassia P. Dal Bello
Assistant Project Manager

Jonathan D. Kitchen, PG, LSP
Principal

# BORING LOGS

# Rock Types

| Rock Name | Characteristics | Symbol |
|---|---|---|
| Claystone | Clay sized particles that are consolidated, lacking fissility. | |
| Coal | Black and shiny, can break into cubes or conchoidally. | |
| Conglomerate | Gravel sized grains and larger held together by finer material, called a breccia if clasts are angular. | |
| Limestone | Effervesses w/ diluted HCl, can be composed of clay up to gravel particles (fossils). | |
| Sandstone | Primarily sand sized particles modified w/ the descriptor fine, medium, or coarse. | |
| Shale | Clay sized particles, shale has fissility which is a horizontal sheet-like or laminated feature. | |
| Siltstone | Composed of silt, normally breaks as irregular chunks. | |

# Rock Quality Descriptions

## Weathering

**Completely Weathered:** All rock material is decomposed and/or disintegrated. The original rock structure may still be intact.

**Highly Weathered:** More than half of the rock material is decomposed. Fresh rock is present only as a discontinuous framework or as corestones.

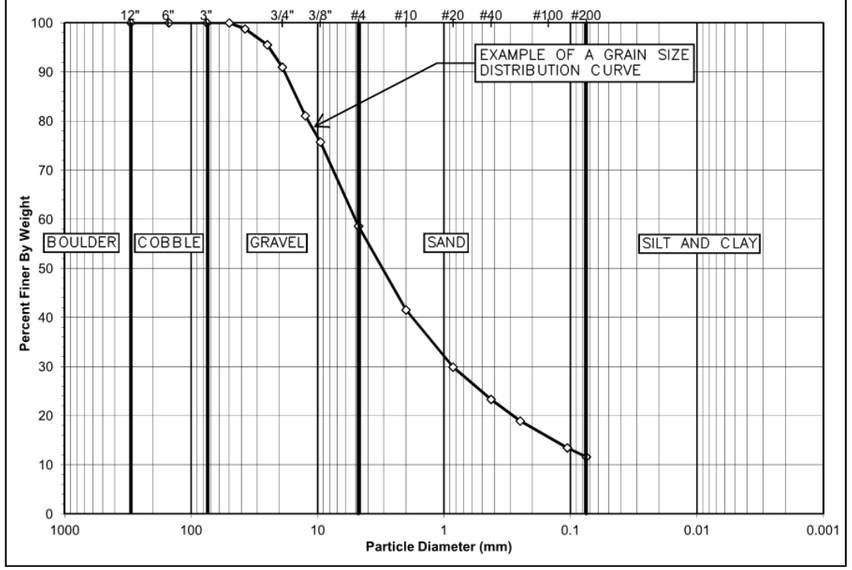
**Moderately Weathered:** Less than half of the rock material is decomposed. Fresh rock is present at a discontinuous framework or as corestones.

**Slightly Weathered:** Discoloration or staining indicates weathering of rock material on discontinuity surfaces. Rock may be discolored and softened.

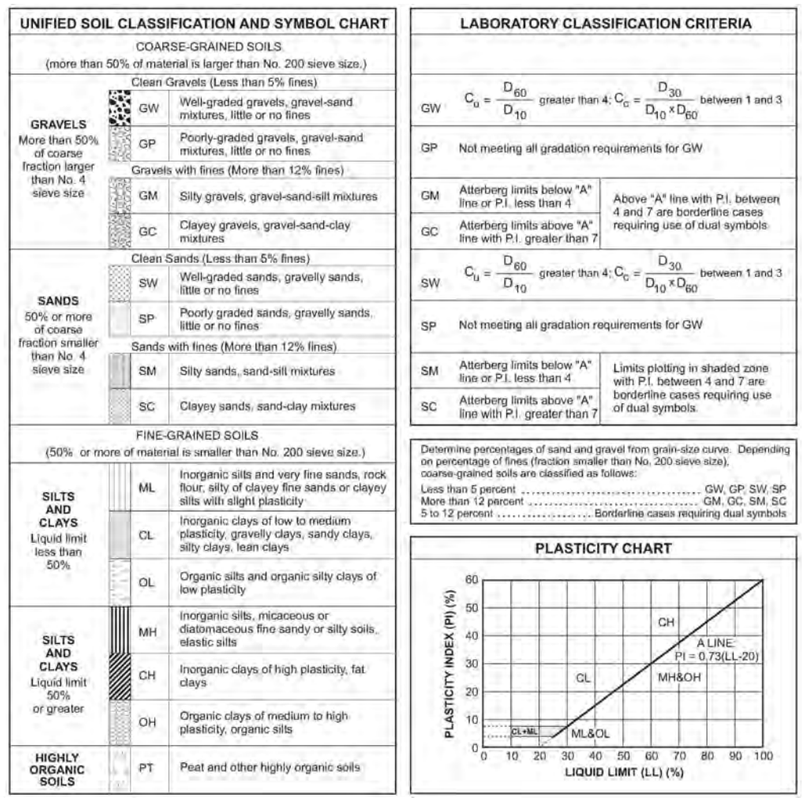
**Fresh:** No visible signs of rock material weathering.

## RQD

| Descriptor | % |
|---|---|
| Very Poor | <25 |
| Poor | 25-50 |
| Fair | 50-75 |
| Good | 75-90 |
| Excellent | >90 |



## Brokenness



| Descriptor | Fracture Spacing (in & ft) |
|---|---|
| Very Broken | <1 (<0.08) |
| Broken | 1-3 (0.08-0.25) |
| Moderately Broken | 3-6 (0.25-0.5) |
| Slightly Broken | >6 (>0.5) |

## Rock Hardness

| Descriptor | Field Criterion | Relative Unconfined Compressive Strength |
|---|---|---|
| Very Hard | Difficult to break w/ Hammer | > 30,000 psi |
| Hard | Hand-held sample breaks w/ Hammer | 8,000 to 30,000 psi |
| Medium Hard | Cannot scrape surface w/ knife | 2,000 to 8,000 psi |
| Soft | Cutting or scraping w/ knife difficult | 500 to 2,000 psi |
| Very Soft | Can be cut w/ knife | < 500 psi |

# Grain Size Distribution Curve

# Glossary

**Alluvial Soil or Alluvium:** Soil deposited by water in a river, stream, floodplain, or delta.

**Bedrock:** Materials underlying soil or other unconsolidated surficial materials in which refusal is consistently encountered on lithified, undisturbed, natural bedrock.

**Colluvial Soil or Colluvium:** Incoherent soil on or at the base of a slope deposited by gravity or slope movement.

**Fill:** Soil derived from natural soil, rock, or processed materials that was placed by artificial methods, such as construction, waste disposal, or dumping.

**Glacial Outwash:** Soil, typically sand and gravel, deposited by glacial streams or meltwater in a preexisting valley or over a plain.

**Glacial Till:** Soil deposited by and underneath a glacier, generally consisting of a heterogeneous, unstratified mixture of clay, sand, gravel, and boulders.

**N-Value:** The blow count representation of the penetration resistance of the soil determined by the Standard Penetration Test (SPT). It is the sum of the number of blows required to drive the sampler the second and third 6-inch increments (sample depth interval of 6 to 18 inches) and is recorded in blows per foot (bpf). The N-value is considered to be an indication of the relative density of coarse-grained soils (sand and gravel) or consistency of fine-grained soils (silt and clay).

**Pocket Pen (PP):** Field penetration test performed using a hand-held penetrometer that estimates unconfined compressive strength of cohesive soil in tons per square foot (tsf).

**Recovery %:** Total length of rock core or soil sample retrieved divided by the total length of the core run or sample interval, expressed as a percentage.

**Refusal:** The depth at which greater than 50 SPT hammer blows are required to drive the sampling spoon 6 inches or less.

**Residual Soil or Residuum:** Soil derived from the physical or chemical weathering of the underlying parent bedrock, generally with N-values less than 30 and 50 bpf in cohesive and cohesionless materials, respectively.

**Rock Quality Designation (RQD):** The sum of the length of intact rock core pieces longer than 4 inches (excluding mechanical breaks) divided by the total length of the core run, expressed as a percentage.

**Shelby Tube:** A 2" to 3" diameter, thin walled sampling tube that is pushed into the soil to obtain a relatively undisturbed soil sample for geotechnical laboratory tests.

**Split Spoon Sampler:** A soil sampling tube which is driven, retrieved, and split-open lengthwise for removal and visual inspection, and testing of the soil obtained.

**Standard Penetration Test (SPT) ASTM D1586 :** Field penetration test consisting of driving a 2-inch outside diameter split-spoon sampler 18 inches using a 140-pound hammer free falling a distance of 30 inches. The number of blows required to advance the spoon through successive 6-inch increments is recorded to determine the N-value.

**Weathered Rock:** Materials derived from lithified, undisturbed, natural bedrock which are able to be sampled with a split-spoon. Cohesive and cohesionless materials generally have N-values greater than 30 and 50 bpf, respectively.

# N-Value Rating

**Fine-Grained Soils (Silt and Clay)**

| Consistency | Blows/ft | PP (tsf) |
|---|---|---|
| Very Soft | 0-2 | <0.25 |
| Soft | 3-4 | 0.25-0.5 |
| Medium Stiff | 5-8 | 0.5-1 |
| Stiff | 9-15 | 1-2 |
| Very Stiff | 16-32 | 2-4 |
| Hard | >32 | >4 |

**Coarse-Grained Soils (Sand and Gravel)**

| Relative Density | Blows/ft |
|---|---|
| Very Loose | 0-4 |
| Loose | 5-10 |
| Medium Dense | 11-30 |
| Dense | 31-50 |
| Very Dense | >50 |

# Unconsolidated Material

| Term | Grain Size in mm (in) | Approximate Example Size |
|---|---|---|
| Clay and Silt | <.075 | can't see grains to barely visible |
| Fine Sand | 0.075-0.4 | table salt to sugar |
| Med. Sand | 0.4-2.0 (~<1/16) | openings in a window screen |
| Coarse Sand | 2.0-4.75 (~1/16-1/8) | sidewalk salt |
| Gravel | 4.75-75 (~1/8-3) | pea to tennis ball |
| Cobble | 75-300 (3-12) | tennis ball to basketball |
| Boulder | >300 (>12) | larger than a basketball |

**Other Features** – Used to describe other identifiable, pertinent features (e.g., angularity of coarse-grained soils, organics, construction debris, etc.)

| Term | % |
|---|---|
| Trace | < 5 |
| Few | 5-15 |
| Some | 15-45 |

**Moisture Content**

Dry: Sample is dusty or obviously dry.
Moist: Anything that does not fit the definition of dry or wet.
Wet: Sample contains free water.

Notes:
Laboratory analytical results compared to RCS-2 Massachusetts Contingency Plan Reportable Concentrations
Table shows only detected analytes
PCBs = Polychlorinated Biphenyls;
PID = photo ionization detector; ppmv = parts per million volumetric;
All data reported in mg/kg = milligrams per kilogram.
< = not detected above laboratory reporting limit
-- = Not Tested
NS = No Standard
**Bold** = exceeds applicable MassDEP MCP Standard RCS-2
PID calibrated with Isobutylene with a Response Factor of 1.0
Reuse levels based on Massachusetts Department of Environmental Protection's "Reuse and Disposal of Contaminated Soil at Massachusetts Landfills Department of Environmental Protection Policy # Comm-97-001"

# LABORATORY ANALYTICAL REPORTS

*CERTIFICATE OF ANALYSIS*

Cassia DalBello
Civil & Environmental Consultants, Inc.
31 Bellows Road
Raynham, MA 02767

**RE: MassCEC - New Bedford (332-344)**
**ESS Laboratory Work Order Number: 23K0532**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

**REVIEWED**
**By ESS Laboratory at 3:05 pm, Nov 22, 2023**

**Analytical Summary**
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

## SAMPLE RECEIPT

The following samples were received on November 16, 2023 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been performed and achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Limit Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

| Lab Number | Sample Name | Matrix | Analysis |

## CURRENT SW-846 METHODOLOGY VERSIONS

### Analytical Methods

1010A - Flashpoint
6010C - ICP
6020A - ICP MS
7010 - Graphite Furnace
7196A - Hexavalent Chromium
7470A - Aqueous Mercury
7471B - Solid Mercury
8011 - EDB/DBCP/TCP
8015C - GRO/DRO
8081B - Pesticides
8082A - PCB
8100M - TPH
8151A - Herbicides
8260B - VOA
8270D - SVOA
8270D SIM - SVOA Low Level
9014 - Cyanide
9038 - Sulfate
9040C - Aqueous pH
9045D - Solid pH (Corrosivity)
9050A - Specific Conductance
9056A - Anions (IC)
9060A - TOC
9095B - Paint Filter
MADEP 04-1.1 - EPH
MADEP 18-2.1 - VPH

### Prep Methods

3005A - Aqueous ICP Digestion
3020A - Aqueous Graphite Furnace / ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3541 - Automated Soxhlet Extraction
3546 - Microwave Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5030C - Aqueous Purge and Trap
5035A - Solid Purge and Trap

SW846 Reactivity Methods 7.3.3.2 (Reactive Cyanide) and 7.3.4.1 (Reactive Sulfide) have been withdrawn by EPA. These methods are reported per client request and are not NELAP accredited.

## MassDEP Analytical Protocol Certification Form

MADEP RTN: _____

This form provides certification for the following data set: **23K0532-01 through 23K0532-12**

Matrices: ( ) Ground Water/Surface Water (x) Soil/Sediment ( ) Drinking Water ( ) Air ( ) Other:_____

**CAM Protocol** (check all that apply below):

| | | | | | |
|---|---|---|---|---|---|
| ( ) 8260 VOC CAM II A | (x) 7470/7471 Hg CAM III B | ( ) MassDEP VPH (GC/PID/FID) CAM IV A | (x) 8082 PCB CAM V A | ( ) 9014 Total Cyanide/PAC CAM VI A | ( ) 6860 Perchlorate CAM VIII B |
| (x) 8270 SVOC CAM II B | ( ) 7010 Metals CAM III C | ( ) MassDEP VPH (GC/MS) CAM IV C | ( ) 8081 Pesticides CAM V B | ( ) 7196 Hex Cr CAM VI B | ( ) MassDEP APH CAM IX A |
| (x) 6010 Metals CAM III A | ( ) 6020 Metals CAM III D | ( ) MassDEP EPH CAM IV B | ( ) 8151 Herbicides CAM V C | ( ) Explosives CAM VIII A | ( ) TO-15 VOC CAM IX B |

***Affirmative responses to questions A through F are required for "Presumptive Certainty" status***

| | | |
|---|---|---|
| A | Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times? | Yes (x) No ( ) |
| B | Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed? | Yes (x) No ( ) |
| C | Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances? | Yes (x) No ( ) |
| D | Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"? | Yes (x) No ( ) |
| E | VPH, EPH, APH and TO-15 only: a. Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications). | Yes ( ) No ( ) |
| | b. APH and TO-15 Methods only: Was the complete analyte list reported for each method? | Yes ( ) No ( ) |
| F | Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)? | Yes (x) No ( ) |

***Responses to Questions G, H and I below are required for "'Presumptive Certainty" status***

| | | |
|---|---|---|
| G | Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)? | Yes (x) No ( )* |
| | ***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.** | |
| H | Were **all** QC performance standards specified in the CAM protocol(s) achieved? | Yes ( ) No (x)* |
| I | Were results reported for the complete analyte list specified in the selected CAM protocol(s)? | Yes (x) No ( )* |

***All negative responses must be addressed in an attached laboratory narrative.***

***I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.***

# ESS Laboratory Sample and Cooler Receipt Checklist

Client: CEC - Civil & Envtal Consultants - TB

Shipped/Delivered Via: ESS Courier

ESS Project ID: 23K0532
Date Received: 11/16/2023
Project Due Date: 11/22/2023
Days for Project: 4 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 2.9 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** (Yes) / No / NA
10. Were any analyses received outside of hold time? Yes / (No)

11. Any Subcontracting needed? Yes / (No)
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? Yes / (No)
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? Yes / No / NA

13. Are the samples properly preserved? (Yes) / No
    a. If metals preserved upon receipt: Date: _____ Time: _____ By/Acid Lot#: _____
    b. Low Level VOA vials frozen: Date: _____ Time: _____ By: _____

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / (No)
    a. Was there a need to contact the client? Yes / No
    Who was contacted? _____ Date: _____ Time: _____ By: _____

Resolution:

## SAMPLE RECEIPT

The following samples were received on November 16, 2023 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been performed and achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Limit Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

| Lab Number | Sample Name | Matrix | Analysis |
|---|---|---|---|
| 23K0532-01 | CEC-1-A 0-6 | Soil | 6010C, 7471B, 8082A, 8270D |

## PROJECT NARRATIVE

**8270D Semi-Volatile Organic Compounds**

D3K0381-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (128% @ 80-120%)

D3K0381-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
2,4-Dinitrophenol (28% @ 20%), 2,6-Dinitrotoluene (21% @ 20%), 3,3′-Dichlorobenzidine (21% @ 20%)

D3K0394-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (125% @ 80-120%)

D3K0394-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
2,4-Dinitrophenol (25% @ 20%), 3,3′-Dichlorobenzidine (21% @ 20%), Hexachlorobutadiene (22% @ 20%)

D3K0428-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (82% @ 80-120%)

D3K0428-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
2,6-Dinitrotoluene (21% @ 20%), 3,3′-Dichlorobenzidine (26% @ 20%), Benzo(g,h,i)perylene (22% @ 20%), bis(2-Ethylhexyl)phthalate (27% @ 20%), Butylbenzylphthalate (24% @ 20%), Di-n-octylphthalate (24% @ 20%), Indeno(1,2,3-cd)Pyrene (24% @ 20%)

**No other observations noted.**

**End of Project Narrative.**

## CURRENT SW-846 METHODOLOGY VERSIONS

### Analytical Methods

1010A - Flashpoint
6010C - ICP
6020A - ICP MS
7010 - Graphite Furnace
7196A - Hexavalent Chromium
7470A - Aqueous Mercury
7471B - Solid Mercury
8011 - EDB/DBCP/TCP
8015C - GRO/DRO
8081B - Pesticides
8082A - PCB
8100M - TPH
8151A - Herbicides
8260B - VOA
8270D - SVOA
8270D SIM - SVOA Low Level
9014 - Cyanide
9038 - Sulfate
9040C - Aqueous pH
9045D - Solid pH (Corrosivity)
9050A - Specific Conductance
9056A - Anions (IC)
9060A - TOC
9095B - Paint Filter
MADEP 04-1.1 - EPH
MADEP 18-2.1 - VPH

### Prep Methods

3005A - Aqueous ICP Digestion
3020A - Aqueous Graphite Furnace / ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3541 - Automated Soxhlet Extraction
3546 - Microwave Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5030C - Aqueous Purge and Trap
5035A - Solid Purge and Trap

SW846 Reactivity Methods 7.3.3.2 (Reactive Cyanide) and 7.3.4.1 (Reactive Sulfide) have been withdrawn by EPA. These methods are reported per client request and are not NELAP accredited.

## MassDEP Analytical Protocol Certification Form

MADEP RTN: _____

This form provides certification for the following data set: **23K0532-01 through 23K0532-12**

Matrices: ( ) Ground Water/Surface Water (x) Soil/Sediment ( ) Drinking Water ( ) Air ( ) Other:_____

**CAM Protocol** (check all that apply below):

| | | | | | |
|---|---|---|---|---|---|
| ( ) 8260 VOC CAM II A | (x) 7470/7471 Hg CAM III B | ( ) MassDEP VPH (GC/PID/FID) CAM IV A | (x) 8082 PCB CAM V A | ( ) 9014 Total Cyanide/PAC CAM VI A | ( ) 6860 Perchlorate CAM VIII B |
| (x) 8270 SVOC CAM II B | ( ) 7010 Metals CAM III C | ( ) MassDEP VPH (GC/MS) CAM IV C | ( ) 8081 Pesticides CAM V B | ( ) 7196 Hex Cr CAM VI B | ( ) MassDEP APH CAM IX A |
| (x) 6010 Metals CAM III A | ( ) 6020 Metals CAM III D | ( ) MassDEP EPH CAM IV B | ( ) 8151 Herbicides CAM V C | ( ) Explosives CAM VIII A | ( ) TO-15 VOC CAM IX B |

***Affirmative responses to questions A through F are required for "Presumptive Certainty" status***

| | | |
|---|---|---|
| A | Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times? | Yes (x) No ( ) |
| B | Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed? | Yes (x) No ( ) |
| C | Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances? | Yes (x) No ( ) |
| D | Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"? | Yes (x) No ( ) |
| E | VPH, EPH, APH and TO-15 only: a. Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications). | Yes ( ) No ( ) |
| | b. APH and TO-15 Methods only: Was the complete analyte list reported for each method? | Yes ( ) No ( ) |
| F | Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)? | Yes (x) No ( ) |

***Responses to Questions G, H and I below are required for "'Presumptive Certainty" status***

| | | |
|---|---|---|
| G | Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)? | Yes (x) No ( )* |
| | ***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.** | |
| H | Were **all** QC performance standards specified in the CAM protocol(s) achieved? | Yes ( ) No (x)* |
| I | Were results reported for the complete analyte list specified in the selected CAM protocol(s)? | Yes (x) No ( )* |

***All negative responses must be addressed in an attached laboratory narrative.***

***I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.***

**Notes and Definitions**

| | |
|---|---|
| U | Analyte included in the analysis, but not detected |
| Q | Calibration required quadratic regression (Q). |
| D | Diluted. |
| CD+ | Continuing Calibration %Diff/Drift is above control limit (CD+). |
| ND | Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes |
| dry | Sample results reported on a dry weight basis |
| RPD | Relative Percent Difference |
| MDL | Method Detection Limit |
| MRL | Method Reporting Limit |
| LOD | Limit of Detection |
| LOQ | Limit of Quantitation |
| DL | Detection Limit |
| I/V | Initial Volume |
| F/V | Final Volume |
| § | Subcontracted analysis; see attached report |
| 1 | Range result excludes concentrations of surrogates and/or internal standards eluting in that range. |
| 2 | Range result excludes concentrations of target analytes eluting in that range. |
| 3 | Range result excludes the concentration of the C9-C10 aromatic range. |
| Avg | Results reported as a mathematical average. |
| NR | No Recovery |
| [CALC] | Calculated Analyte |
| SUB | Subcontracted analysis; see attached report |
| RL | Reporting Limit |
| EDL | Estimated Detection Limit |
| MF | Membrane Filtration |
| MPN | Most Probable Number |
| TNTC | Too numerous to Count |
| CFU | Colony Forming Units |

# ESS Laboratory Sample and Cooler Receipt Checklist

Client: CEC - Civil & Envtal Consultants - TB

Shipped/Delivered Via: ESS Courier

ESS Project ID: 23K0532
Date Received: 11/16/2023
Project Due Date: 11/22/2023
Days for Project: 4 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 2.9 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** (Yes) / No / NA
10. Were any analyses received outside of hold time? Yes / (No)

11. Any Subcontracting needed? Yes / (No)
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? Yes / (No)
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? Yes / No / NA

13. Are the samples properly preserved? (Yes) / No
    a. If metals preserved upon receipt: Date: _____ Time: _____ By/Acid Lot#: _____
    b. Low Level VOA vials frozen: Date: _____ Time: _____ By: _____

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / (No)
    a. Was there a need to contact the client? Yes / No
    Who was contacted? _____ Date: _____ Time: _____ By: _____

Resolution:

| Sample Number | Container ID | Proper Container | Air Bubbles Present | Sufficient Volume | Container Type | Preservative | Record pH (Cyanide and 608 Pesticides) |
|---|---|---|---|---|---|---|---|
| 1 | 494131 | Yes | N/A | Yes | 8 oz jar | NP | |
| 1 | 494740 | Yes | N/A | Yes | 8 oz jar | NP | |
| 2 | 494132 | Yes | N/A | Yes | 8 oz jar | NP | |
| 3 | 494133 | Yes | N/A | Yes | 8 oz jar | NP | |
| 4 | 494134 | Yes | N/A | Yes | 8 oz jar | NP | |
| 4 | 494741 | Yes | N/A | Yes | 8 oz jar | NP | |

Raynham, MA 02767

**RE: MassCEC Phase III - Site 4 (332-344)**
**ESS Laboratory Work Order Number: 24F0351**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

**REVIEWED**
**By ESS Laboratory at 4:08 pm, Jun 18, 2024**

**Analytical Summary**
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

## SAMPLE RECEIPT

The following samples were received on June 10, 2024 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been performed and achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Limit Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

**Low Level VOA vials were frozen by the client on June 7, 2024 at 17:00.**
**Tetrahydrofuran is reported above the MA CAM reporting limit of 0.010 mg/kg.**

**Question I: All samples for metals and EPH were analyzed for a subset of the required MCP list per the client's request.**

**Notes and Definitions**

| | |
|---|---|
| WL | Results obtained from a deionized water leach of the sample. |
| U | Analyte included in the analysis, but not detected |
| Q | Calibration required quadratic regression (Q). |
| EL | Elevated Method Reporting Limits due to sample matrix (EL). |
| D+ | Relative percent difference for duplicate is outside of criteria (D+). |
| D | Diluted. |
| CD+ | Continuing Calibration %Diff/Drift is above control limit (CD+). |
| B+ | Blank Spike recovery is above upper control limit (B+). |
| > | Greater than. |
| ND | Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes |
| dry | Sample results reported on a dry weight basis |
| RPD | Relative Percent Difference |
| MDL | Method Detection Limit |
| MRL | Method Reporting Limit |
| LOD | Limit of Detection |
| LOQ | Limit of Quantitation |
| DL | Detection Limit |
| I/V | Initial Volume |
| F/V | Final Volume |
| § | Subcontracted analysis; see attached report |
| 1 | Range result excludes concentrations of surrogates and/or internal standards eluting in that range. |
| 2 | Range result excludes concentrations of target analytes eluting in that range. |
| 3 | Range result excludes the concentration of the C9-C10 aromatic range. |
| Avg | Results reported as a mathematical average. |
| NR | No Recovery |
| [CALC] | Calculated Analyte |
| SUB | Subcontracted analysis; see attached report |
| RL | Reporting Limit |
| EDL | Estimated Detection Limit |
| MF | Membrane Filtration |
| MPN | Most Probable Number |
| TNTC | Too numerous to Count |
| CFU | Colony Forming Units |

# ESS Laboratory Sample and Cooler Receipt Checklist

Client: CEC - Civil & Envtal Consultants - TB

Shipped/Delivered Via: ESS Courier

ESS Project ID: 24F0351
Date Received: 6/10/2024
Project Due Date: 6/17/2024
Days for Project: 5 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 4.8 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** Yes / No / NA
10. Were any analyses received outside of hold time? Yes / No

11. Any Subcontracting needed? Yes / No
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? Yes / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? Yes / No / NA
13. Are the samples properly preserved? Yes / No
    a. If metals preserved upon receipt: Date: 6/7/2024 Time: 17:00 -JA 6/18/2024 By/Acid Lot#:
    b. If dissolved metals are requested, are they: Yes / No Field Filtered Yes / No To Be Lab Filtered
    c. Low Level VOA vials frozen: Date: N/A Time: N/A By: Client

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / No
    a. Was there a need to contact the client? Yes / No
    Who was contacted: Cam Indeck Date: 6/18/2024 Time: 09:30 By: JA

Resolution:

Client Confirmed date/time VOC vials were frozen

| Sample Number | Container ID | Proper Container | Air Bubbles Present | Sufficient Volume | Container Type | Preservative | Record pH (Cyanide and 608 Pesticides) |
|---|---|---|---|---|---|---|---|
| 1 | 558800 | Yes | N/A | Yes | VOA Vial | DI Water | |
| 1 | 558801 | Yes | N/A | Yes | VOA Vial | DI Water | |
| 1 | 558804 | Yes | N/A | Yes | VOA Vial | MeOH | |
| 2 | 558880 | Yes | N/A | Yes | 4 oz. Jar | NP | |
| 2 | 558882 | Yes | N/A | Yes | 8 oz jar | NP | |
| 2 | 558883 | Yes | N/A | Yes | 8 oz jar | NP | |
| 3 | 558802 | Yes | N/A | Yes | VOA Vial | DI Water | |
| 3 | 558803 | Yes | N/A | Yes | VOA Vial | DI Water | |
| 3 | 558805 | Yes | N/A | Yes | VOA Vial | MeOH | |
| 4 | 558881 | Yes | N/A | Yes | 4 oz. Jar | NP | |
| 4 | 558884 | Yes | N/A | Yes | 8 oz jar | NP | |
| 4 | 558885 | Yes | N/A | Yes | 8 oz jar | NP | |

**2nd Review**
**Were all containers scanned into storage/lab?** Initials TD Yes / No
Are barcode labels on correct containers? Yes / No / NA
Are all Flashpoint stickers attached/container ID # circled? Yes / No / NA
Are all Hex Chrome stickers attached? Yes / No / NA
Are all QC stickers attached? Yes / No / NA
Are VOA stickers attached if bubbles noted? Yes / No / NA

Civil & Environmental Consultants, Inc.
31 Bellows Road
Raynham, MA 02767

**RE: MassCEC Phase III - Site 4 (332-344)**
**ESS Laboratory Work Order Number: 24F0378**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

**REVIEWED**
**By ESS Laboratory at 6:23 pm, Jun 19, 2024**

**Analytical Summary**
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

## SAMPLE RECEIPT

The following samples were received on June 11, 2024 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been performed and achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Limit Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

**Low Level VOA vials were frozen by ESS Laboratory on June 11, 2024 at 17:55.**
**Tetrahydrofuran is reported above the MA CAM reporting limit of 0.010 mg/kg.**

**Question I: All samples for EPH and metals were analyzed for a subset of the required MCP list per the client's request.**

## PROJECT NARRATIVE

**Semi-Volatile Organic Compounds**

D4F0245-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (134% @ 40-160%)

D4F0245-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
N-Nitrosodimethylamine (26% @ 20%), Pyridine (25% @ 20%)

D4F0305-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (112% @ 40-160%)

D4F0305-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
N-Nitrosodimethylamine (24% @ 20%)

**Total Metals**

24F0378-02 **Elevated Method Reporting Limits due to sample matrix (EL).**
Silver

24F0378-04 **Elevated Method Reporting Limits due to sample matrix (EL).**
Arsenic

24F0378-06 **Elevated Method Reporting Limits due to sample matrix (EL).**
Arsenic , Silver

**Volatile Organics Low Level**

D4F0279-CCV1 **Calibration required quadratic regression (Q).**
Naphthalene (94% @ 40-160%)

**No other observations noted.**

**End of Project Narrative.**

## CURRENT SW-846 METHODOLOGY VERSIONS

### Analytical Methods

1010A - Flashpoint
6010D - ICP
6020B - ICP MS
7010 - Graphite Furnace
7196A - Hexavalent Chromium
7470A - Aqueous Mercury
7471B - Solid Mercury
8011 - EDB/DBCP/TCP
8015C - GRO/DRO
8081B - Pesticides
8082A - PCB
8100M - TPH
8151A - Herbicides
8260D - VOA
8270E - SVOA
8270E SIM - SVOA Low Level
9014 - Cyanide
9038 - Sulfate
9040C - Aqueous pH
9045D - Solid pH (Corrosivity)
9050A - Specific Conductance
9056A - Anions (IC)
9060A - TOC
9095B - Paint Filter
MADEP 19-2.1 - EPH
MADEP 18-2.1 - VPH

### Prep Methods

3005A - Aqueous ICP Digestion
3020A - Aqueous Graphite Furnace / ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3546 - Microwave Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5030C - Aqueous Purge and Trap
5035A - Solid Purge and Trap

SW846 Reactivity Methods 7.3.3.2 (Reactive Cyanide) and 7.3.4.1 (Reactive Sulfide) have been withdrawn by EPA. These methods are reported per client request and are not NELAP accredited.

## MassDEP Analytical Protocol Certification Form

MADEP RTN: _____

This form provides certification for the following data set: **24F0378-01 through 24F0378-06**

Matrices: ( ) Ground Water/Surface Water (x) Soil/Sediment ( ) Drinking Water ( ) Air ( ) Other:_____

**CAM Protocol** (check all that apply below):

| | | | | | |
|---|---|---|---|---|---|
| (x) 8260 VOC CAM II A | ( x) 7470/7471 Hg CAM III B | ( ) MassDEP VPH (GC/PID/FID) CAM IV A | (x) 8082 PCB CAM V A | ( ) 9014 Total Cyanide/PAC CAM VI A | ( ) 6860 Perchlorate CAM VIII B |
| (x) 8270 SVOC CAM II B | ( ) 7010 Metals CAM III C | ( ) MassDEP VPH (GC/MS) CAM IV C | (x) 8081 Pesticides CAM V B | ( ) 7196 Hex Cr CAM VI B | ( ) MassDEP APH CAM IX A |
| (x) 6010 Metals CAM III A | (x) 6020 Metals CAM III D | (x) MassDEP EPH CAM IV B | (x) 8151 Herbicides CAM V C | ( ) Explosives CAM VIII A | ( ) TO-15 VOC CAM IX B |

***Affirmative responses to questions A through F are required for "Presumptive Certainty" status***

| | | |
|---|---|---|
| A | Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times? | Yes (x) No ( ) |
| B | Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed? | Yes (x) No ( ) |
| C | Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances? | Yes (x) No ( ) |
| D | Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"? | Yes (x) No ( ) |
| E | VPH, EPH, APH and TO-15 only: a. Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications). | Yes (x) No ( ) |
| | b. APH and TO-15 Methods only: Was the complete analyte list reported for each method? | Yes ( ) No ( ) |
| F | Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)? | Yes (x) No ( ) |

***Responses to Questions G, H and I below are required for '"Presumptive Certainty" status***

| | | |
|---|---|---|
| G | Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)? ***Data User Note:** Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.* | Yes ( ) No (x)* |
| H | Were **all** QC performance standards specified in the CAM protocol(s) achieved? | Yes ( ) No (x)* |
| I | Were results reported for the complete analyte list specified in the selected CAM protocol(s)? | Yes ( ) No (x)* |

***All negative responses must be addressed in an attached laboratory narrative.***

***I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.***

# ESS Laboratory Sample and Cooler Receipt Checklist

Client: CEC - Civil & Envtal Consultants - TB

Shipped/Delivered Via: ESS Courier

ESS Project ID: 24F0378
Date Received: 6/11/2024
Project Due Date: 6/18/2024
Days for Project: 5 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 4.4 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** Yes / No / NA
10. Were any analyses received outside of hold time? Yes / No

11. Any Subcontracting needed? Yes / No
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? Yes / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? Yes / No / NA
13. Are the samples properly preserved? Yes / No
    a. If metals preserved upon receipt: Date: Time: By/Acid Lot#:
    b. If dissolved metals are requested, are they: Yes / No Field Filtered Yes / No To Be Lab Filtered
    c. Low Level VOA vials frozen: Date: 6/11/24 Time: 17:55 By:

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / No
    a. Was there a need to contact the client? Yes / No
    Who was contacted? Date: Time: By:

Resolution:

| Sample Number | Container ID | Proper Container | Air Bubbles Present | Sufficient Volume | Container Type | Preservative | Record pH (Cyanide and 608 Pesticides) |

**RE: MassCEC Phase III - Site 4 (332-344)**
**ESS Laboratory Work Order Number: 24F0379**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

***REVIEWED***
***By ESS Laboratory at 4:52 pm, Jun 18, 2024***

**Analytical Summary**
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

## SAMPLE RECEIPT

The following samples were received on June 11, 2024 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been performed and achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Limit Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

**Low Level VOA vials were frozen by ESS Laboratory on June 11, 2024 at 17:50.**
**Tetrahydrofuran is reported above the MA CAM reporting limit of 0.010 mg/kg.**

**Question I: All samples for EPH and metals were analyzed for a subset of the required MCP list per the client's request.**

2,4-Dinitrophenol (112% @ 40-160%)

D4F0305-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
N-Nitrosodimethylamine (24% @ 20%)

**Volatile Organics Low Level**

D4F0279-CCV1 **Calibration required quadratic regression (Q).**
Naphthalene (94% @ 40-160%)

**No other observations noted.**

**End of Project Narrative.**

## CURRENT SW-846 METHODOLOGY VERSIONS

### Analytical Methods

1010A - Flashpoint
6010D - ICP
6020B - ICP MS
7010 - Graphite Furnace
7196A - Hexavalent Chromium
7470A - Aqueous Mercury
7471B - Solid Mercury
8011 - EDB/DBCP/TCP
8015C - GRO/DRO
8081B - Pesticides
8082A - PCB
8100M - TPH
8151A - Herbicides
8260D - VOA
8270E - SVOA
8270E SIM - SVOA Low Level
9014 - Cyanide
9038 - Sulfate
9040C - Aqueous pH
9045D - Solid pH (Corrosivity)
9050A - Specific Conductance
9056A - Anions (IC)
9060A - TOC
9095B - Paint Filter
MADEP 19-2.1 - EPH
MADEP 18-2.1 - VPH

### Prep Methods

3005A - Aqueous ICP Digestion
3020A - Aqueous Graphite Furnace / ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3546 - Microwave Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5030C - Aqueous Purge and Trap
5035A - Solid Purge and Trap

SW846 Reactivity Methods 7.3.3.2 (Reactive Cyanide) and 7.3.4.1 (Reactive Sulfide) have been withdrawn by EPA. These methods are reported per client request and are not NELAP accredited.

## MassDEP Analytical Protocol Certification Form

MADEP RTN: _____

This form provides certification for the following data set: **24F0379-01 through 24F0379-06**

Matrices: ( ) Ground Water/Surface Water (x) Soil/Sediment ( ) Drinking Water ( ) Air ( ) Other:_____

**CAM Protocol** (check all that apply below):

| | | | | | |
|---|---|---|---|---|---|
| (x) 8260 VOC CAM II A | ( x) 7470/7471 Hg CAM III B | ( ) MassDEP VPH (GC/PID/FID) CAM IV A | (x ) 8082 PCB CAM V A | ( ) 9014 Total Cyanide/PAC CAM VI A | ( ) 6860 Perchlorate CAM VIII B |
| (x) 8270 SVOC CAM II B | ( ) 7010 Metals CAM III C | ( ) MassDEP VPH (GC/MS) CAM IV C | ( x) 8081 Pesticides CAM V B | ( ) 7196 Hex Cr CAM VI B | ( ) MassDEP APH CAM IX A |
| (x) 6010 Metals CAM III A | ( ) 6020 Metals CAM III D | (x) MassDEP EPH CAM IV B | ( x) 8151 Herbicides CAM V C | ( ) Explosives CAM VIII A | ( ) TO-15 VOC CAM IX B |

***Affirmative responses to questions A through F are required for "Presumptive Certainty" status***

| | | |
|---|---|---|
| A | Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times? | Yes (x) No ( ) |
| B | Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed? | Yes (x) No ( ) |
| C | Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances? | Yes (x) No ( ) |
| D | Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"? | Yes (x) No ( ) |
| E | VPH, EPH, APH and TO-15 only: a. Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications). | Yes (x) No ( ) |
| | b. APH and TO-15 Methods only: Was the complete analyte list reported for each method? | Yes ( ) No ( ) |
| F | Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)? | Yes (x) No ( ) |

***Responses to Questions G, H and I below are required for '"Presumptive Certainty" status***

| | | |
|---|---|---|
| G | Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)? | Yes ( ) No (x)* |
| | ***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.** | |
| H | Were **all** QC performance standards specified in the CAM protocol(s) achieved? | Yes ( ) No (x)* |
| I | Were results reported for the complete analyte list specified in the selected CAM protocol(s)? | Yes ( ) No (x)* |

***All negative responses must be addressed in an attached laboratory narrative.***

***I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.***

**Notes and Definitions**

| | |
|---|---|
| WL | Results obtained from a deionized water leach of the sample. |
| U | Analyte included in the analysis, but not detected |
| Q | Calibration required quadratic regression (Q). |
| D | Diluted. |
| CD+ | Continuing Calibration %Diff/Drift is above control limit (CD+). |
| > | Greater than. |
| ND | Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes |
| dry | Sample results reported on a dry weight basis |
| RPD | Relative Percent Difference |
| MDL | Method Detection Limit |
| MRL | Method Reporting Limit |
| LOD | Limit of Detection |
| LOQ | Limit of Quantitation |
| DL | Detection Limit |
| I/V | Initial Volume |
| F/V | Final Volume |
| § | Subcontracted analysis; see attached report |
| 1 | Range result excludes concentrations of surrogates and/or internal standards eluting in that range. |
| 2 | Range result excludes concentrations of target analytes eluting in that range. |
| 3 | Range result excludes the concentration of the C9-C10 aromatic range. |
| Avg | Results reported as a mathematical average. |
| NR | No Recovery |
| [CALC] | Calculated Analyte |
| SUB | Subcontracted analysis; see attached report |
| RL | Reporting Limit |

# ESS Laboratory Sample and Cooler Receipt Checklist

Client: CEC - Civil & Envtal Consultants - TB

Shipped/Delivered Via: ESS Courier

ESS Project ID: 24F0379
Date Received: 6/11/2024
Project Due Date: 6/18/2024
Days for Project: 5 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 4.4 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** (Yes) / No / NA
10. Were any analyses received outside of hold time? Yes / (No)

11. Any Subcontracting needed? Yes / (No)
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? (Yes) / No
    a. Air bubbles in aqueous VOAs? Yes / (No)
    b. Does methanol cover soil completely? (Yes) / No / NA
13. Are the samples properly preserved? (Yes) / No
    a. If metals preserved upon receipt: Date: Time: By/Acid Lot#:
    b. If dissolved metals are requested, are they: Yes / No Field Filtered Yes / No To Be Lab Filtered
    c. Low Level VOA vials frozen: Date: 10/11/24 Time: 17:50 By:

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / (No)
    a. Was there a need to contact the client? Yes / No
    Who was contacted? Date: Time: By:

Resolution:

| Sample Number | Container ID | Proper Container | Air Bubbles Present | Sufficient Volume | Container Type | Preservative | Record pH (Cyanide and 608 Pesticides) |
|---|---|---|---|---|---|---|---|

**ESS Laboratory Work Order Number: 24F0472**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

**REVIEWED**
**By ESS Laboratory at 2:37 pm, Jun 24, 2024**

**Analytical Summary**
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

## SAMPLE RECEIPT

The following samples were received on June 12, 2024 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been performed and achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Limit Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

**Low Level VOA vials were frozen by ESS Laboratory on 6/12/24 at 18:00**
**Tetrahydrofuran is reported above the MA CAM reporting limit of 0.010 mg/kg.**

**Question I: All samples for metals and EPH were analyzed for a subset of the required MCP list per the client's request.**

**Notes and Definitions**

| | |
|---|---|
| WL | Results obtained from a deionized water leach of the sample. |
| U | Analyte included in the analysis, but not detected |
| RRF | Analyte does not meet the Relative Response Factor (RRF) criteria in the calibration |
| Q | Calibration required quadratic regression (Q). |
| EL | Elevated Method Reporting Limits due to sample matrix (EL). |
| D | Diluted. |
| CD+ | Continuing Calibration %Diff/Drift is above control limit (CD+). |
| B+ | Blank Spike recovery is above upper control limit (B+). |
| > | Greater than. |
| ND | Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes |
| dry | Sample results reported on a dry weight basis |
| RPD | Relative Percent Difference |
| MDL | Method Detection Limit |
| MRL | Method Reporting Limit |
| LOD | Limit of Detection |
| LOQ | Limit of Quantitation |
| DL | Detection Limit |
| I/V | Initial Volume |
| F/V | Final Volume |
| § | Subcontracted analysis; see attached report |
| 1 | Range result excludes concentrations of surrogates and/or internal standards eluting in that range. |
| 2 | Range result excludes concentrations of target analytes eluting in that range. |
| 3 | Range result excludes the concentration of the C9-C10 aromatic range. |
| Avg | Results reported as a mathematical average. |
| NR | No Recovery |
| [CALC] | Calculated Analyte |
| SUB | Subcontracted analysis; see attached report |
| RL | Reporting Limit |
| EDL | Estimated Detection Limit |
| MF | Membrane Filtration |
| MPN | Most Probable Number |
| TNTC | Too numerous to Count |
| CFU | Colony Forming Units |

# ESS Laboratory Sample and Cooler Receipt Checklist

Client: CEC - Civil & Envtal Consultants - TB

Shipped/Delivered Via: ESS Courier

ESS Project ID: 24F0472
Date Received: 6/12/2024
Project Due Date: 6/19/2024
Days for Project: 5 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 4.7 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** (Yes) / No / NA
10. Were any analyses received outside of hold time? Yes / (No)

11. Any Subcontracting needed? Yes / (No)
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? (Yes) / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? Yes / No / NA
13. Are the samples properly preserved? (Yes) / No
    a. If metals preserved upon receipt: Date: Time: By/Acid Lot#:
    b. If dissolved metals are requested, are they: Yes / No Field Filtered Yes / No To Be Lab Filtered
    c. Low Level VOA vials frozen: Date: 6/12/24 Time: 1500 By: TD

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / (No)
    a. Was there a need to contact the client? Yes / No
    Who was contacted: Date: Time: By:

Resolution:

| Sample Number | Container ID | Proper Container | Air Bubbles Present | Sufficient Volume | Container Type | Preservative | Record pH (Cyanide and 608 Pesticides) |
|---|---|---|---|---|---|---|---|
| 1 | 560286 | Yes | N/A | Yes | VOA Vial | MeOH | |
| 1 | 560289 | Yes | N/A | Yes | VOA Vial | DI Water | |
| 1 | 560290 | Yes | N/A | Yes | VOA Vial | DI Water | |
| 2 | 560295 | Yes | N/A | Yes | 8 oz jar | NP | |
| 2 | 560296 | Yes | N/A | Yes | 8 oz jar | NP | |
| 2 | 560301 | Yes | N/A | Yes | 4 oz. Jar | NP | |
| 3 | 560287 | Yes | N/A | Yes | VOA Vial | MeOH | |
| 3 | 560291 | Yes | N/A | Yes | VOA Vial | DI Water | |
| 3 | 560292 | Yes | N/A | Yes | VOA Vial | DI Water | |
| 4 | 560297 | Yes | N/A | Yes | 8 oz jar | NP | |
| 4 | 560298 | Yes | N/A | Yes | 8 oz jar | NP | |
| 4 | 560302 | Yes | N/A | Yes | 4 oz. Jar | NP | |
| 5 | 560288 | Yes | N/A | Yes | VOA Vial | MeOH | |
| 5 | 560293 | Yes | N/A | Yes | VOA Vial | DI Water | |
| 5 | 560294 | Yes | N/A | Yes | VOA Vial | DI Water | |
| 6 | 560299 | Yes | N/A | Yes | 8 oz jar | NP | |
| 6 | 560300 | Yes | N/A | Yes | 8 oz jar | NP | |
| 6 | 560303 | Yes | N/A | Yes | 4 oz. Jar | NP | |

## ESS Laboratory Sample and Cooler Receipt Checklist

Client: CEC - Civil & Envtal Consultants - TB

ESS Project ID: 24F0472

Date Received: 6/12/2024

**2nd Review**

**Were all containers scanned into storage/lab?** Initials MM

Are barcode labels on correct containers? Yes / No

Are all Flashpoint stickers attached/container ID # circled? Yes / No / NA

Are all Hex Chrome stickers attached? Yes / No / NA

Are all QC stickers attached? Yes / No / NA

Are VOA stickers attached if bubbles noted? Yes / No / NA

**ESS Laboratory Work Order Number: 24E0882**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

**REVIEWED**
**By ESS Laboratory at 4:33 pm, May 29, 2024**

**Analytical Summary**
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

## SAMPLE RECEIPT

The following samples were received on May 21, 2024 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been performed and achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Limit Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

**Low Level VOA vials were frozen by ESS Laboratory on May 21, 2024 at 17:25.**
**Tetrahydrofuran is reported above the MA CAM reporting limit of 0.010 mg/kg.**

**Question I: All samples for metals and EPH were analyzed for a subset of the required MCP list per the client's request.**

## PROJECT NARRATIVE

**8100M Total Petroleum Hydrocarbons**
DE42151-BS1 **Blank Spike recovery is above upper control limit (B+).**
Hexatriacontane (C36) (143% @ 40-140%)
DE42151-BSD1 **Blank Spike recovery is above upper control limit (B+).**
Hexatriacontane (C36) (145% @ 40-140%)

**Semi-Volatile Organic Compounds**
D4E0467-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (103% @ 40-160%), Pentachlorophenol (98% @ 40-160%)

**Volatile Organics Low Level**
D4E0458-CCV1 **Continuing Calibration %Diff/Drift is below control limit (CD-).**
sec-Butylbenzene (25% @ 20%), Tetrachloroethene (29% @ 20%)
DE42218-BSD1 **Relative percent difference for duplicate is outside of criteria (D+).**
Acetone (38% @ 20%)

**No other observations noted.**

**End of Project Narrative.**

## CURRENT SW-846 METHODOLOGY VERSIONS

### Analytical Methods

1010A - Flashpoint
6010D - ICP
6020B - ICP MS
7010 - Graphite Furnace
7196A - Hexavalent Chromium
7470A - Aqueous Mercury
7471B - Solid Mercury
8011 - EDB/DBCP/TCP
8015C - GRO/DRO
8081B - Pesticides
8082A - PCB
8100M - TPH
8151A - Herbicides
8260D - VOA
8270E - SVOA
8270E SIM - SVOA Low Level
9014 - Cyanide
9038 - Sulfate
9040C - Aqueous pH
9045D - Solid pH (Corrosivity)
9050A - Specific Conductance
9056A - Anions (IC)
9060A - TOC
9095B - Paint Filter
MADEP 19-2.1 - EPH
MADEP 18-2.1 - VPH

### Prep Methods

3005A - Aqueous ICP Digestion
3020A - Aqueous Graphite Furnace / ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3546 - Microwave Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5030C - Aqueous Purge and Trap
5035A - Solid Purge and Trap

SW846 Reactivity Methods 7.3.3.2 (Reactive Cyanide) and 7.3.4.1 (Reactive Sulfide) have been withdrawn by EPA. These methods are reported per client request and are not NELAP accredited.

***Affirmative responses to questions A through F are required for "Presumptive Certainty" status***

| | | |
|---|---|---|
| A | Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times? | Yes (X) No ( ) |
| B | Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed? | Yes (X) No ( ) |
| C | Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances? | Yes (X) No ( ) |
| D | Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"? | Yes (X) No ( ) |
| E | VPH, EPH, APH and TO-15 only: a. Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications). | Yes (X) No ( ) |
| | b. APH and TO-15 Methods only: Was the complete analyte list reported for each method? | Yes ( ) No ( ) |
| F | Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)? | Yes (X) No ( ) |

***Responses to Questions G, H and I below are required for '"Presumptive Certainty" status***

| | | |
|---|---|---|
| G | Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)? | Yes ( ) No (X)* |
| | ***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.** | |
| H | Were **all** QC performance standards specified in the CAM protocol(s) achieved? | Yes ( ) No (X)* |
| I | Were results reported for the complete analyte list specified in the selected CAM protocol(s)? | Yes ( ) No (X)* |

***All negative responses must be addressed in an attached laboratory narrative.***

***I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.***

# ESS Laboratory Sample and Cooler Receipt Checklist

Client: CEC - Civil & Envtal Consultants - TB

Shipped/Delivered Via: ESS Courier

ESS Project ID: 24E0882
Date Received: 5/21/2024
Project Due Date: 5/29/2024
Days for Project: 5 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 5.4 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** Yes / No / NA
10. Were any analyses received outside of hold time? Yes / No

11. Any Subcontracting needed? Yes / No
    ESS Sample IDs: **2,4**
    Analysis: **Grain size**
    TAT: **5 day**
12. Were VOAs received? Yes / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? Yes / No / NA
13. Are the samples properly preserved? Yes / No
    a. If metals preserved upon receipt: Date: ____ Time: ____ By/Acid Lot#: ____
    b. If dissolved metals are requested, are they: Yes / No Field Filtered Yes / No To Be Lab Filtered
    c. Low Level VOA vials frozen: Date: 5/21/24 Time: 1725 By: NA

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / No
    a. Was there a need to contact the client? Yes / No
    Who was contacted? ____ Date: ____ Time: ____ By: ____

Resolution:

| Sample Number | Container ID | Proper Container | Air Bubbles Present | Sufficient Volume | Container Type | Preservative | Record pH (Cyanide and 608 Pesticides) |
|---|---|---|---|---|---|---|---|
| 1 | 551993 | Yes | N/A | Yes | 8 oz jar | NP | |
| 1 | 551994 | Yes | N/A | Yes | 8 oz jar | NP | |
| 1 | 552491 | Yes | N/A | Yes | 4 oz. Jar | NP | |
| 2 | 551987 | Yes | N/A | Yes | VOA Vial | DI Water | |
| 2 | 551988 | Yes | N/A | Yes | VOA Vial | DI Water | |
| 2 | 551991 | Yes | N/A | Yes | VOA Vial | MeOH | |
| 3 | 551995 | Yes | N/A | Yes | 8 oz jar | NP | |
| 3 | 551996 | Yes | N/A | Yes | 8 oz jar | NP | |
| 3 | 552492 | Yes | N/A | Yes | 4 oz. Jar | NP | |
| 4 | 551989 | Yes | N/A | Yes | VOA Vial | DI Water | |
| 4 | 551990 | Yes | N/A | Yes | VOA Vial | DI Water | |
| 4 | 551992 | Yes | N/A | Yes | VOA Vial | MeOH | |

**2nd Review**
**Were all containers scanned into storage/lab?** Initials TB
Are barcode labels on correct containers? Yes / No
Are all Flashpoint stickers attached/container ID # circled? Yes / No / NA
Are all Hex Chrome stickers attached? Yes / No / NA
Are all QC stickers attached? Yes / No / NA
Are VOA stickers attached if bubbles noted? Yes / No / NA

**RE: MassCEC Phase III - Site 4 (332-344)**
**ESS Laboratory Work Order Number: 24E1195**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

**REVIEWED**
**By ESS Laboratory at 5:38 pm, Jun 06, 2024**

**Analytical Summary**
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Client Project ID: MassCEC Phase III - Site 4 ESS Laboratory Work Order: 24E1195

## SAMPLE RECEIPT

The following samples were received on May 30, 2024 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been performed and achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Limit Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

**Low Level VOA vials were frozen by ESS Laboratory on 5/30/22 at 17:22.**
**Tetrahydrofuran is reported above the MA CAM reporting limit of 0.010 mg/kg.**

**Question I: All samples for EPH and Metals were analyzed for a subset of the required MCP list per the client's request.**

## PROJECT NARRATIVE

**Semi-Volatile Organic Compounds**

D4E0637-CCV1 **Analyte does not meet the Relative Response Factor (RRF) criteria in the calibration**
2,4-Dimethylphenol (180% @ 80-120%)

D4E0637-CCV1 **Calibration required quadratic regression (Q).**
Pentachlorophenol (89% @ 40-160%)

D4E0637-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
2,4-Dimethylphenol (80% @ 20%), 3,3′-Dichlorobenzidine (22% @ 20%), Aniline (36% @ 20%), Hexachlorobutadiene (31% @ 20%)

D4F0069-CCV1 **Analyte does not meet the Relative Response Factor (RRF) criteria in the calibration**
2,4-Dinitrophenol (95% @ 40-160%)

D4F0069-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (95% @ 40-160%), Pentachlorophenol (107% @ 40-160%)

**Total Metals**

DE43107-BSD2 **Blank Spike recovery is below lower control limit (B-).**
Arsenic (65% @ 70-102%), Barium (71% @ 78-111%), Cadmium (66% @ 74-105%), Chromium (72% @ 73-107%), Lead (72% @ 74-108%), Selenium (66% @ 71-109%)

**Volatile Organics Low Level**

D4F0006-CCV1 **Continuing Calibration %Diff/Drift is below control limit (CD-).**
1,4-Dioxane (34% @ 20%), sec-Butylbenzene (27% @ 20%), Tetrachloroethene (38% @ 20%)

D4F0011-CCV1 **Continuing Calibration %Diff/Drift is below control limit (CD-).**
1,2-Dichlorobenzene (21% @ 20%), 1,3-Dichlorobenzene (21% @ 20%), Bromobenzene (21% @ 20%), sec-Butylbenzene (35% @ 20%), Tetrachloroethene (38% @ 20%)

DF40102-BSD1 **Blank Spike recovery is below lower control limit (B-).**
Tetrachloroethene (67% @ 70-130%)

DF40305-BS1 **Blank Spike recovery is below lower control limit (B-).**
Tetrachloroethene (69% @ 70-130%)

DF40305-BSD1 **Relative percent difference for duplicate is outside of criteria (D+).**
Acetone (51% @ 20%)

**No other observations noted.**

**End of Project Narrative.**

## CURRENT SW-846 METHODOLOGY VERSIONS

### Analytical Methods

1010A - Flashpoint
6010D - ICP
6020B - ICP MS
7010 - Graphite Furnace
7196A - Hexavalent Chromium
7470A - Aqueous Mercury
7471B - Solid Mercury
8011 - EDB/DBCP/TCP
8015C - GRO/DRO
8081B - Pesticides
8082A - PCB
8100M - TPH
8151A - Herbicides
8260D - VOA
8270E - SVOA
8270E SIM - SVOA Low Level
9014 - Cyanide
9038 - Sulfate
9040C - Aqueous pH
9045D - Solid pH (Corrosivity)
9050A - Specific Conductance
9056A - Anions (IC)
9060A - TOC
9095B - Paint Filter
MADEP 19-2.1 - EPH
MADEP 18-2.1 - VPH

### Prep Methods

3005A - Aqueous ICP Digestion
3020A - Aqueous Graphite Furnace / ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3546 - Microwave Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5030C - Aqueous Purge and Trap
5035A - Solid Purge and Trap

SW846 Reactivity Methods 7.3.3.2 (Reactive Cyanide) and 7.3.4.1 (Reactive Sulfide) have been withdrawn by EPA. These methods are reported per client request and are not NELAP accredited.

## MassDEP Analytical Protocol Certification Form

MADEP RTN: _____

This form provides certification for the following data set: **24E1195-01 through 24E1195-04**

Matrices: ( ) Ground Water/Surface Water (x) Soil/Sediment ( ) Drinking Water ( ) Air ( ) Other:_____

**CAM Protocol** (check all that apply below):

| | | | | | |
|---|---|---|---|---|---|
| (x) 8260 VOC CAM II A | (x) 7470/7471 Hg CAM III B | ( ) MassDEP VPH (GC/PID/FID) CAM IV A | ( ) 8082 PCB CAM V A | ( ) 9014 Total Cyanide/PAC CAM VI A | ( ) 6860 Perchlorate CAM VIII B |
| (x) 8270 SVOC CAM II B | ( ) 7010 Metals CAM III C | ( ) MassDEP VPH (GC/MS) CAM IV C | (x) 8081 Pesticides CAM V B | ( ) 7196 Hex Cr CAM VI B | ( ) MassDEP APH CAM IX A |
| (x) 6010 Metals CAM III A | ( ) 6020 Metals CAM III D | (x) MassDEP EPH CAM IV B | (x) 8151 Herbicides CAM V C | ( ) Explosives CAM VIII A | ( ) TO-15 VOC CAM IX B |

***Affirmative responses to questions A through F are required for "Presumptive Certainty" status***

| | | |
|---|---|---|
| A | Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times? | Yes (x) No ( ) |
| B | Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed? | Yes (x) No ( ) |
| C | Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances? | Yes (x) No ( ) |
| D | Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"? | Yes (x) No ( ) |
| E | VPH, EPH, APH and TO-15 only: a. Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications). | Yes (x) No ( ) |
| | b. APH and TO-15 Methods only: Was the complete analyte list reported for each method? | Yes ( ) No ( ) |
| F | Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)? | Yes (x) No ( ) |

***Responses to Questions G, H and I below are required for '"Presumptive Certainty" status***

| | | |
|---|---|---|
| G | Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)? | Yes ( ) No (x)* |
| | ***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.** | |
| H | Were **all** QC performance standards specified in the CAM protocol(s) achieved? | Yes ( ) No (x)* |
| I | Were results reported for the complete analyte list specified in the selected CAM protocol(s)? | Yes ( ) No (x)* |

***All negative responses must be addressed in an attached laboratory narrative.***

***I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.***

## ESS Laboratory Sample and Cooler Receipt Checklist

Client: CEC - Civil & Envtal Consultants - TB

Shipped/Delivered Via: ESS Courier

ESS Project ID: 24E1195
Date Received: 5/30/2024
Project Due Date: 6/6/2024
Days for Project: 5 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 4.5 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** (Yes) / No / NA
10. Were any analyses received outside of hold time? Yes / (No)

11. Any Subcontracting needed? Yes / (No)
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? (Yes) / No
    a. Air bubbles in aqueous VOAs? Yes / (No)
    b. Does methanol cover soil completely? (Yes) / No / NA
13. Are the samples properly preserved? (Yes) / No
    a. If metals preserved upon receipt: Date: Time: By/Acid Lot#:
    b. If dissolved metals are requested, are they: Yes / No Field Filtered
    c. Low Level VOA vials frozen: Date: 5/30/24 Time: 1722 By: [illegible]
    Yes / No To Be Lab Filtered

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / (No)
    a. Was there a need to contact the client? Yes / (No)
    Who was contacted: Date: Time: By:

Resolution:

| Sample Number | Container ID | Proper Container | Air Bubbles Present | Sufficient Volume | Container Type | Preservative | Record pH (Cyanide and 608 Pesticides) |
|---|---|---|---|---|---|---|---|
| 1 | 554749 | Yes | N/A | Yes | VOA Vial | DI Water | |
| 1 | 554750 | Yes | N/A | Yes | VOA Vial | DI Water | |
| 1 | 554753 | Yes | N/A | Yes | VOA Vial | MeOH | |

**RE: MassCEC Phase III - Site 4 (332-344)**
**ESS Laboratory Work Order Number: 24E1268**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

***REVIEWED***
***By ESS Laboratory at 6:54 pm, Jun 06, 2024***

**Analytical Summary**
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

## SAMPLE RECEIPT

The following samples were received on May 31, 2024 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been performed and achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Limit Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

**Question I: All samples for EPH & Metals were analyzed for a subset of the required MCP list per the client's request.**

| Lab Number | Sample Name | Matrix | Analysis |
|---|---|---|---|
| 24E1268-01 | CEC-10A 9ft-11ft | Soil | 8260D Low |
| 24E1268-02 | CEC-10A 0ft-12ft | Soil | 1010A, 2550B, 6010D, 7.3.3.2, 7.3.4.1, 7471B, 8081B, 8082A, 8100M, 8151A, 8270E, 9045, 9050A, 9095A |
| 24E1268-03 | CEC-10A 19ft-21ft | Soil | 8260D Low |
| 24E1268-04 | CEC-10A 12ft-24ft | Soil | 1010A, 2550B, 6010D, 7.3.3.2, 7.3.4.1, 7471B, 8081B, 8082A, 8100M, 8151A, 8270E, 9045, 9050A, 9095A |

## PROJECT NARRATIVE

**Semi-Volatile Organic Compounds**

D4E0637-CCV1 **Analyte does not meet the Relative Response Factor (RRF) criteria in the calibration**
2,4-Dimethylphenol (180% @ 80-120%)

D4E0637-CCV1 **Calibration required quadratic regression (Q).**
Pentachlorophenol (89% @ 40-160%)

D4E0637-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
2,4-Dimethylphenol (80% @ 20%), 3,3′-Dichlorobenzidine (22% @ 20%), Aniline (36% @ 20%), Hexachlorobutadiene (31% @ 20%)

D4F0069-CCV1 **Analyte does not meet the Relative Response Factor (RRF) criteria in the calibration**
2,4-Dinitrophenol (95% @ 40-160%)

D4F0069-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (95% @ 40-160%), Pentachlorophenol (107% @ 40-160%)

**Total Metals**

24E1268-04 **Elevated Method Reporting Limits due to sample matrix (EL).**
Arsenic

**Volatile Organics Low Level**

D4F0011-CCV1 **Continuing Calibration %Diff/Drift is below control limit (CD-).**
1,2-Dichlorobenzene (21% @ 20%), 1,3-Dichlorobenzene (21% @ 20%), Bromobenzene (21% @ 20%), sec-Butylbenzene (35% @ 20%), Tetrachloroethene (38% @ 20%)

DF40305-BS1 **Blank Spike recovery is below lower control limit (B-).**
Tetrachloroethene (69% @ 70-130%)

DF40305-BSD1 **Relative percent difference for duplicate is outside of criteria (D+).**
Acetone (51% @ 20%)

**No other observations noted.**

**End of Project Narrative.**

## CURRENT SW-846 METHODOLOGY VERSIONS

### Analytical Methods

1010A - Flashpoint
6010D - ICP
6020B - ICP MS
7010 - Graphite Furnace
7196A - Hexavalent Chromium
7470A - Aqueous Mercury
7471B - Solid Mercury
8011 - EDB/DBCP/TCP
8015C - GRO/DRO
8081B - Pesticides
8082A - PCB
8100M - TPH
8151A - Herbicides
8260D - VOA
8270E - SVOA
8270E SIM - SVOA Low Level
9014 - Cyanide
9038 - Sulfate
9040C - Aqueous pH
9045D - Solid pH (Corrosivity)
9050A - Specific Conductance
9056A - Anions (IC)
9060A - TOC
9095B - Paint Filter
MADEP 19-2.1 - EPH
MADEP 18-2.1 - VPH

### Prep Methods

3005A - Aqueous ICP Digestion
3020A - Aqueous Graphite Furnace / ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3546 - Microwave Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5030C - Aqueous Purge and Trap
5035A - Solid Purge and Trap

SW846 Reactivity Methods 7.3.3.2 (Reactive Cyanide) and 7.3.4.1 (Reactive Sulfide) have been withdrawn by EPA. These methods are reported per client request and are not NELAP accredited.

## MassDEP Analytical Protocol Certification Form

MADEP RTN: _____

This form provides certification for the following data set: **24E1268-01 through 24E1268-04**

Matrices: ( ) Ground Water/Surface Water (x) Soil/Sediment ( ) Drinking Water ( ) Air ( ) Other:_____

**CAM Protocol** (check all that apply below):

| | | | | | |
|---|---|---|---|---|---|
| ( ) 8260 VOC CAM II A | ( x) 7470/7471 Hg CAM III B | ( ) MassDEP VPH (GC/PID/FID) CAM IV A | ( x) 8082 PCB CAM V A | ( ) 9014 Total Cyanide/PAC CAM VI A | ( ) 6860 Perchlorate CAM VIII B |
| (x) 8270 SVOC CAM II B | ( ) 7010 Metals CAM III C | ( ) MassDEP VPH (GC/MS) CAM IV C | ( x) 8081 Pesticides CAM V B | ( ) 7196 Hex Cr CAM VI B | ( ) MassDEP APH CAM IX A |
| (x) 6010 Metals CAM III A | ( ) 6020 Metals CAM III D | ( x) MassDEP EPH CAM IV B | ( x) 8151 Herbicides CAM V C | ( ) Explosives CAM VIII A | ( ) TO-15 VOC CAM IX B |

***Affirmative responses to questions A through F are required for "Presumptive Certainty" status***

| | | |
|---|---|---|
| A | Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times? | Yes (x) No ( ) |
| B | Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed? | Yes (x) No ( ) |
| C | Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances? | Yes (x) No ( ) |
| D | Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"? | Yes (x) No ( ) |
| E | VPH, EPH, APH and TO-15 only: a. Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications). | Yes (x) No ( ) |
| | b. APH and TO-15 Methods only: Was the complete analyte list reported for each method? | Yes ( ) No ( ) |
| F | Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)? | Yes (x) No ( ) |

***Responses to Questions G, H and I below are required for '"Presumptive Certainty" status***

| | | |
|---|---|---|
| G | Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)? | Yes ( ) No (x)* |
| | ***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.** | |
| H | Were **all** QC performance standards specified in the CAM protocol(s) achieved? | Yes ( ) No (x)* |
| I | Were results reported for the complete analyte list specified in the selected CAM protocol(s)? | Yes ( ) No (x)* |

***All negative responses must be addressed in an attached laboratory narrative.***

***I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.***

*CERTIFICATE OF ANALYSIS*

Client Name: Civil & Environmental Consultants, Inc.
Client Project ID: MassCEC Phase III - Site 4 ESS Laboratory Work Order: 24E1268

**Notes and Definitions**

| | |
|---|---|
| WL | Results obtained from a deionized water leach of the sample. |
| U | Analyte included in the analysis, but not detected |
| RRF | Analyte does not meet the Relative Response Factor (RRF) criteria in the calibration |
| Q | Calibration required quadratic regression (Q). |
| EL | Elevated Method Reporting Limits due to sample matrix (EL). |
| D+ | Relative percent difference for duplicate is outside of criteria (D+). |
| D | Diluted. |
| CD+ | Continuing Calibration %Diff/Drift is above control limit (CD+). |
| CD- | Continuing Calibration %Diff/Drift is below control limit (CD-). |
| B- | Blank Spike recovery is below lower control limit (B-). |
| > | Greater than. |
| ND | Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes |
| dry | Sample results reported on a dry weight basis |
| RPD | Relative Percent Difference |
| MDL | Method Detection Limit |
| MRL | Method Reporting Limit |
| LOD | Limit of Detection |
| LOQ | Limit of Quantitation |
| DL | Detection Limit |
| I/V | Initial Volume |
| F/V | Final Volume |
| § | Subcontracted analysis; see attached report |
| 1 | Range result excludes concentrations of surrogates and/or internal standards eluting in that range. |
| 2 | Range result excludes concentrations of target analytes eluting in that range. |
| 3 | Range result excludes the concentration of the C9-C10 aromatic range. |
| Avg | Results reported as a mathematical average. |
| NR | No Recovery |
| [CALC] | Calculated Analyte |
| SUB | Subcontracted analysis; see attached report |
| RL | Reporting Limit |
| EDL | Estimated Detection Limit |
| MF | Membrane Filtration |
| MPN | Most Probable Number |
| TNTC | Too numerous to Count |
| CFU | Colony Forming Units |

## ESS Laboratory Sample and Cooler Receipt Checklist

Client: CEC - Civil & Envtal Consultants - TB

Shipped/Delivered Via: ESS Courier

ESS Project ID: 24E1268
Date Received: 5/31/2024
Project Due Date: 6/7/2024
Days for Project: 5 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 3.3 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** Yes / No / NA
10. Were any analyses received outside of hold time? Yes / No

11. Any Subcontracting needed? Yes / No
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? Yes / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? Yes / No / NA
13. Are the samples properly preserved? Yes / No
    a. If metals preserved upon receipt: Date: Time: By/Acid Lot#:
    b. If dissolved metals are requested, are they: Yes / No Field Filtered Yes / No To Be Lab Filtered
    c. Low Level VOA vials frozen: Date: 5/31/24 Time: 1622 By:

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / No
    a. Was there a need to contact the client? Yes / No
    Who was contacted? Date: Time: By:

Resolution:

| Sample Number | Container ID | Proper Container | Air Bubbles Present | Sufficient Volume | Container Type | Preservative | Record pH (Cyanide and 608 Pesticides) |

**RE: MassCEC Phase III - Site 4 (332-344)**
**ESS Laboratory Work Order Number: 24F0027**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

**REVIEWED**
**By ESS Laboratory at 2:44 pm, Jun 10, 2024**

**Analytical Summary**
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Client Name: Civil & Environmental Consultants, Inc.
Client Project ID: MassCEC Phase III - Site 4 ESS Laboratory Work Order: 24F0027

## SAMPLE RECEIPT

The following samples were received on June 03, 2024 for the analyses specified on the enclosed Chain of Custody Record.

To achieve CAM compliance for MCP data, ESS Laboratory has reviewed all QA/QC Requirements and Performance Standards listed in each method. Holding times and preservation have also been reviewed. All CAM requirements have been performed and achieved unless noted in the project narrative.

Each method has been set-up in the laboratory to reach required MCP standards. The methods for aqueous VOA and Soil Methanol VOA have known limitations for certain analytes. The regulatory standards may not be achieved due to these limitations. In addition, for all methods, matrix interferences, dilutions, and %Solids may elevate method reporting limits above regulatory standards. ESS Laboratory can provide, upon request, a Limit Checker (regulatory standard comparison spreadsheet) electronic deliverable which will highlight these exceedances.

**Low Level VOA vials were frozen by the client on May 31, 2024 at 17:00.**
**Tetrahydrofuran is reported above the MA CAM reporting limit of 0.010 mg/kg.**

**Question I: All samples for EPH and metals were analyzed for a subset of the required MCP list per the client's request.**

Client Name: Civil & Environmental Consultants, Inc.
Client Project ID: MassCEC Phase III - Site 4 ESS Laboratory Work Order: 24F0027

## CURRENT SW-846 METHODOLOGY VERSIONS

### Analytical Methods

1010A - Flashpoint
6010D - ICP
6020B - ICP MS
7010 - Graphite Furnace
7196A - Hexavalent Chromium
7470A - Aqueous Mercury
7471B - Solid Mercury
8011 - EDB/DBCP/TCP
8015C - GRO/DRO
8081B - Pesticides
8082A - PCB
8100M - TPH
8151A - Herbicides
8260D - VOA
8270E - SVOA
8270E SIM - SVOA Low Level
9014 - Cyanide
9038 - Sulfate
9040C - Aqueous pH
9045D - Solid pH (Corrosivity)
9050A - Specific Conductance
9056A - Anions (IC)
9060A - TOC
9095B - Paint Filter
MADEP 19-2.1 - EPH
MADEP 18-2.1 - VPH

### Prep Methods

3005A - Aqueous ICP Digestion
3020A - Aqueous Graphite Furnace / ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3546 - Microwave Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5030C - Aqueous Purge and Trap
5035A - Solid Purge and Trap

SW846 Reactivity Methods 7.3.3.2 (Reactive Cyanide) and 7.3.4.1 (Reactive Sulfide) have been withdrawn by EPA. These methods are reported per client request and are not NELAP accredited.

## MassDEP Analytical Protocol Certification Form

MADEP RTN: _____

This form provides certification for the following data set: **24F0027-01 through 24F0027-02**

Matrices: ( ) Ground Water/Surface Water (X) Soil/Sediment ( ) Drinking Water ( ) Air ( ) Other:_____

**CAM Protocol** (check all that apply below):

| | | | | | |
|---|---|---|---|---|---|
| (X) 8260 VOC CAM II A | (X) 7470/7471 Hg CAM III B | ( ) MassDEP VPH (GC/PID/FID) CAM IV A | (X) 8082 PCB CAM V A | ( ) 9014 Total Cyanide/PAC CAM VI A | ( ) 6860 Perchlorate CAM VIII B |
| (X) 8270 SVOC CAM II B | ( ) 7010 Metals CAM III C | ( ) MassDEP VPH (GC/MS) CAM IV C | (X) 8081 Pesticides CAM V B | ( ) 7196 Hex Cr CAM VI B | ( ) MassDEP APH CAM IX A |
| (X) 6010 Metals CAM III A | ( ) 6020 Metals CAM III D | (X) MassDEP EPH CAM IV B | (X) 8151 Herbicides CAM V C | ( ) Explosives CAM VIII A | ( ) TO-15 VOC CAM IX B |

***Affirmative responses to questions A through F are required for "Presumptive Certainty" status***

| | | |
|---|---|---|
| A | Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times? | Yes (X) No ( ) |
| B | Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed? | Yes (X) No ( ) |
| C | Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances? | Yes (X) No ( ) |
| D | Does the laboratory report comply with all the reporting requirements specified in the CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"? | Yes (X) No ( ) |
| E | VPH, EPH, APH and TO-15 only: a. Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications). | Yes (X) No ( ) |
| | b. APH and TO-15 Methods only: Was the complete analyte list reported for each method? | Yes ( ) No ( ) |
| F | Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)? | Yes (X) No ( ) |

***Responses to Questions G, H and I below are required for '"Presumptive Certainty" status***

| | | |
|---|---|---|
| G | Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocols(s)? | Yes ( ) No (X)* |
| | ***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.** | |
| H | Were **all** QC performance standards specified in the CAM protocol(s) achieved? | Yes ( ) No (X)* |
| I | Were results reported for the complete analyte list specified in the selected CAM protocol(s)? | Yes ( ) No (X)* |

***All negative responses must be addressed in an attached laboratory narrative.***

***I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.***
