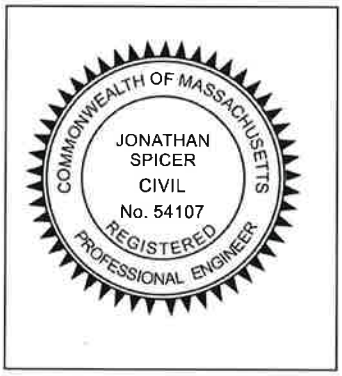
I have reviewed the Stormwater Report, including the soil evaluation, computations, Long-term Pollution Prevention Plan, the Construction Period Erosion and Sedimentation Control Plan (if included), the Long-term Post-Construction Operation and Maintenance Plan, the Illicit Discharge Compliance Statement (if included) and the plans showing the stormwater management system, and have determined that they have been prepared in accordance with the requirements of the Stormwater Management Standards as further elaborated by the Massachusetts Stormwater Handbook. I have also determined that the information presented in the Stormwater Checklist is accurate and that the information presented in the Stormwater Report accurately reflects conditions at the site as of the date of this permit application.

Registered Professional Engineer Block and Signature



Signature and Date 11/5/2019

Checklist

Project Type: Is the application for new development, redevelopment, or a mix of new and redevelopment?

☒ New development

☐ Redevelopment

☐ Mix of New Development and Redevelopment

Checklist for Stormwater Report

Checklist (continued)

LID Measures: Stormwater Standards require LID measures to be considered. Document what environmentally sensitive design and LID Techniques were considered during the planning and design of the project:

- ☐ No disturbance to any Wetland Resource Areas
- ☐ Site Design Practices (e.g. clustered development, reduced frontage setbacks)
- ☐ Reduced Impervious Area (Redevelopment Only)
- ☒ Minimizing disturbance to existing trees and shrubs
- ☐ LID Site Design Credit Requested:
  - ☐ Credit 1
  - ☐ Credit 2
  - ☐ Credit 3
- ☐ Use of "country drainage" versus curb and gutter conveyance and pipe
- ☐ Bioretention Cells (includes Rain Gardens)
- ☐ Constructed Stormwater Wetlands (includes Gravel Wetlands designs)
- ☐ Treebox Filter
- ☐ Water Quality Swale
- ☐ Grass Channel
- ☐ Green Roof
- ☐ Other (describe): _____

Standard 1: No New Untreated Discharges

- ☒ No new untreated discharges
- ☐ Outlets have been designed so there is no erosion or scour to wetlands and waters of the Commonwealth
- ☐ Supporting calculations specified in Volume 3 of the Massachusetts Stormwater Handbook included.

Checklist for Stormwater Report

Checklist (continued)

Standard 2: Peak Rate Attenuation

☒ Standard 2 waiver requested because the project is located in land subject to coastal storm flowage and stormwater discharge is to a wetland subject to coastal flooding.

☐ Evaluation provided to determine whether off-site flooding increases during the 100-year 24-hour storm.

☐ Calculations provided to show that post-development peak discharge rates do not exceed pre-development rates for the 2-year and 10-year 24-hour storms. If evaluation shows that off-site flooding increases during the 100-year 24-hour storm, calculations are also provided to show that post-development peak discharge rates do not exceed pre-development rates for the 100-year 24-hour storm.

Standard 3: Recharge not applicable, poor soils with construction debris

☐ Soil Analysis provided.

☐ Required Recharge Volume calculation provided.

☐ Required Recharge volume reduced through use of the LID site Design Credits.

☐ Sizing the infiltration, BMPs is based on the following method: Check the method used.

☐ Static ☐ Simple Dynamic ☐ Dynamic Field[1]

☐ Runoff from all impervious areas at the site discharging to the infiltration BMP.

☐ Runoff from all impervious areas at the site is *not* discharging to the infiltration BMP and calculations are provided showing that the drainage area contributing runoff to the infiltration BMPs is sufficient to generate the required recharge volume.

☐ Recharge BMPs have been sized to infiltrate the Required Recharge Volume.

☐ Recharge BMPs have been sized to infiltrate the Required Recharge Volume *only* to the maximum extent practicable for the following reason:

- ☐ Site is comprised solely of C and D soils and/or bedrock at the land surface
- ☐ M.G.L. c. 21E sites pursuant to 310 CMR 40.0000
- ☐ Solid Waste Landfill pursuant to 310 CMR 19.000
- ☐ Project is otherwise subject to Stormwater Management Standards only to the maximum extent practicable.

☐ Calculations showing that the infiltration BMPs will drain in 72 hours are provided.

☐ Property includes a M.G.L. c. 21E site or a solid waste landfill and a mounding analysis is included.

[1] 80% TSS removal is required prior to discharge to infiltration BMP if Dynamic Field method is used.

Checklist for Stormwater Report

Checklist (continued)

Standard 3: Recharge (continued)

☐ The infiltration BMP is used to attenuate peak flows during storms greater than or equal to the 10-year 24-hour storm and separation to seasonal high groundwater is less than 4 feet and a mounding analysis is provided.

☐ Documentation is provided showing that infiltration BMPs do not adversely impact nearby wetland resource areas.

Standard 4: Water Quality

The Long-Term Pollution Prevention Plan typically includes the following:

- Good housekeeping practices;
- Provisions for storing materials and waste products inside or under cover;
- Vehicle washing controls;
- Requirements for routine inspections and maintenance of stormwater BMPs;
- Spill prevention and response plans;
- Provisions for maintenance of lawns, gardens, and other landscaped areas;
- Requirements for storage and use of fertilizers, herbicides, and pesticides;
- Pet waste management provisions;
- Provisions for operation and management of septic systems;
- Provisions for solid waste management;
- Snow disposal and plowing plans relative to Wetland Resource Areas;
- Winter Road Salt and/or Sand Use and Storage restrictions;
- Street sweeping schedules;
- Provisions for prevention of illicit discharges to the stormwater management system;
- Documentation that Stormwater BMPs are designed to provide for shutdown and containment in the event of a spill or discharges to or near critical areas or from LUHPPL;
- Training for staff or personnel involved with implementing Long-Term Pollution Prevention Plan;
- List of Emergency contacts for implementing Long-Term Pollution Prevention Plan.

☐ A Long-Term Pollution Prevention Plan is attached to Stormwater Report and is included as an attachment to the Wetlands Notice of Intent.

☐ Treatment BMPs subject to the 44% TSS removal pretreatment requirement and the one inch rule for calculating the water quality volume are included, and discharge:

- ☐ is within the Zone II or Interim Wellhead Protection Area
- ☐ is near or to other critical areas
- ☐ is within soils with a rapid infiltration rate (greater than 2.4 inches per hour)
- ☐ involves runoff from land uses with higher potential pollutant loads.

☐ The Required Water Quality Volume is reduced through use of the LID site Design Credits.

☒ Calculations documenting that the treatment train meets the 80% TSS removal requirement and, if applicable, the 44% TSS removal pretreatment requirement, are provided.

Checklist for Stormwater Report

Checklist (continued)

Standard 4: Water Quality (continued)

☐ The BMP is sized (and calculations provided) based on:

- ☐ The ½" or 1" Water Quality Volume or
- ☐ The equivalent flow rate associated with the Water Quality Volume and documentation is provided showing that the BMP treats the required water quality volume.

☒ The applicant proposes to use proprietary BMPs, and documentation supporting use of proprietary BMP and proposed TSS removal rate is provided. This documentation may be in the form of the propriety BMP checklist found in Volume 2, Chapter 4 of the Massachusetts Stormwater Handbook and submitting copies of the TARP Report, STEP Report, and/or other third party studies verifying performance of the proprietary BMPs.

☐ A TMDL exists that indicates a need to reduce pollutants other than TSS and documentation showing that the BMPs selected are consistent with the TMDL is provided.

Standard 5: Land Uses With Higher Potential Pollutant Loads (LUHPPLs) not applicable

☐ The NPDES Multi-Sector General Permit covers the land use and the Stormwater Pollution Prevention Plan (SWPPP) has been included with the Stormwater Report.

☐ The NPDES Multi-Sector General Permit covers the land use and the SWPPP will be submitted ***prior to*** the discharge of stormwater to the post-construction stormwater BMPs.

☐ The NPDES Multi-Sector General Permit does ***not*** cover the land use.

☐ LUHPPLs are located at the site and industry specific source control and pollution prevention measures have been proposed to reduce or eliminate the exposure of LUHPPLs to rain, snow, snow melt and runoff, and been included in the long term Pollution Prevention Plan.

☐ All exposure has been eliminated.

☐ All exposure has ***not*** been eliminated and all BMPs selected are on MassDEP LUHPPL list.

☐ The LUHPPL has the potential to generate runoff with moderate to higher concentrations of oil and grease (e.g. all parking lots with >1000 vehicle trips per day) and the treatment train includes an oil grit separator, a filtering bioretention area, a sand filter or equivalent.

Standard 6: Critical Areas not applicable

☐ The discharge is near or to a critical area and the treatment train includes only BMPs that MassDEP has approved for stormwater discharges to or near that particular class of critical area.

☐ Critical areas and BMPs are identified in the Stormwater Report.

Checklist for Stormwater Report

Checklist (continued)

Standard 7: Redevelopments and Other Projects Subject to the Standards only to the maximum extent practicable not applicable

☐ The project is subject to the Stormwater Management Standards only to the maximum Extent Practicable as a:

☐ Limited Project

☐ Small Residential Projects: 5-9 single family houses or 5-9 units in a multi-family development provided there is no discharge that may potentially affect a critical area.

☐ Small Residential Projects: 2-4 single family houses or 2-4 units in a multi-family development with a discharge to a critical area

☐ Marina and/or boatyard provided the hull painting, service and maintenance areas are protected from exposure to rain, snow, snow melt and runoff

☐ Bike Path and/or Foot Path

☐ Redevelopment Project

☐ Redevelopment portion of mix of new and redevelopment.

☐ Certain standards are not fully met (Standard No. 1, 8, 9, and 10 must always be fully met) and an explanation of why these standards are not met is contained in the Stormwater Report.

☐ The project involves redevelopment and a description of all measures that have been taken to improve existing conditions is provided in the Stormwater Report. The redevelopment checklist found in Volume 2 Chapter 3 of the Massachusetts Stormwater Handbook may be used to document that the proposed stormwater management system (a) complies with Standards 2, 3 and the pretreatment and structural BMP requirements of Standards 4-6 to the maximum extent practicable and (b) improves existing conditions.

Standard 8: Construction Period Pollution Prevention and Erosion and Sedimentation Control

A Construction Period Pollution Prevention and Erosion and Sedimentation Control Plan must include the following information:

- Narrative;
- Construction Period Operation and Maintenance Plan;
- Names of Persons or Entity Responsible for Plan Compliance;
- Construction Period Pollution Prevention Measures;
- Erosion and Sedimentation Control Plan Drawings;
- Detail drawings and specifications for erosion control BMPs, including sizing calculations;
- Vegetation Planning;
- Site Development Plan;
- Construction Sequencing Plan;
- Sequencing of Erosion and Sedimentation Controls;
- Operation and Maintenance of Erosion and Sedimentation Controls;
- Inspection Schedule;
- Maintenance Schedule;
- Inspection and Maintenance Log Form.

☐ A Construction Period Pollution Prevention and Erosion and Sedimentation Control Plan containing the information set forth above has been included in the Stormwater Report.

Checklist for Stormwater Report

Checklist (continued)

Standard 8: Construction Period Pollution Prevention and Erosion and Sedimentation Control (continued)

☐ The project is highly complex and information is included in the Stormwater Report that explains why it is not possible to submit the Construction Period Pollution Prevention and Erosion and Sedimentation Control Plan with the application. A Construction Period Pollution Prevention and Erosion and Sedimentation Control has ***not*** been included in the Stormwater Report but will be submitted ***before*** land disturbance begins.

☐ The project is ***not*** covered by a NPDES Construction General Permit.

☐ The project is covered by a NPDES Construction General Permit and a copy of the SWPPP is in the Stormwater Report.

☒ The project is covered by a NPDES Construction General Permit but no SWPPP been submitted. The SWPPP will be submitted BEFORE land disturbance begins.

Standard 9: Operation and Maintenance Plan

☒ The Post Construction Operation and Maintenance Plan is included in the Stormwater Report and includes the following information:

- ☒ Name of the stormwater management system owners;
- ☒ Party responsible for operation and maintenance;
- ☒ Schedule for implementation of routine and non-routine maintenance tasks;
- ☐ Plan showing the location of all stormwater BMPs maintenance access areas;
- ☐ Description and delineation of public safety features;
- ☐ Estimated operation and maintenance budget; and
- ☒ Operation and Maintenance Log Form.

☐ The responsible party is ***not*** the owner of the parcel where the BMP is located and the Stormwater Report includes the following submissions:

- ☐ A copy of the legal instrument (deed, homeowner's association, utility trust or other legal entity) that establishes the terms of and legal responsibility for the operation and maintenance of the project site stormwater BMPs;
- ☐ A plan and easement deed that allows site access for the legal entity to operate and maintain BMP functions.

Standard 10: Prohibition of Illicit Discharges

☐ The Long-Term Pollution Prevention Plan includes measures to prevent illicit discharges;

☐ An Illicit Discharge Compliance Statement is attached;

☒ NO Illicit Discharge Compliance Statement is attached but will be submitted ***prior to*** the discharge of any stormwater to post-construction BMPs.

Subject: Lynnway Splash Pad

Hi Marianna,

As long as the splash pad is clean water it can be put in the drain. Attached is a plan of the drainage and utilities in the area.

Let me know if you need anything else.

Thanks,
Ashley

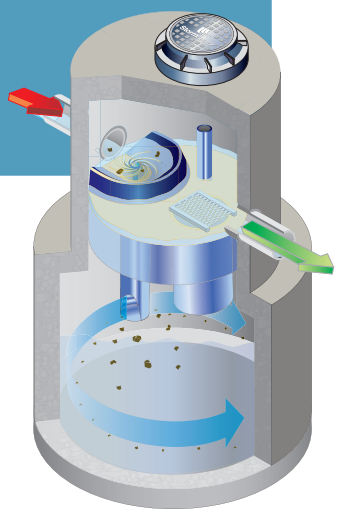
Stormceptor® STC



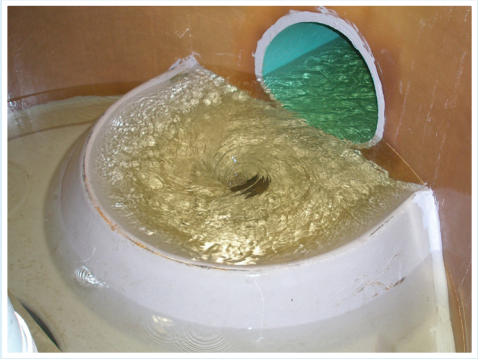
The calm *during* the storm

When it rains, oils, sediment and other contaminants are washed from paved surfaces directly into our storm drains and waterways. Non-point source pollution such as stormwater now accounts for 80% of water pollution in North America and governments are responding with demanding regulations to protect our water resources.

Removing more pollutants

Stormceptor removes more pollutants from stormwater than any other separator.

- Maintains continuous positive treatment of total suspended solids (TSS) year-round, regardless of flow rate
- Designed to remove a wide range of particle sizes, as well as free oils, heavy metals and nutrients that attach to fine sediment
- Can be designed to remove a specific particle size distribution (PSD)



A calm treatment environment

- Stormceptor slows incoming stormwater to create a non-turbulent treatment environment, allowing free oils and debris to rise, and sediment to settle
- Scour prevention technology ensures pollutants are captured and contained during all rainfall events, even extreme storms

Proven performance

With more than 20 years of industry experience, Stormceptor has been performance tested and verified by some of the most stringent technology evaluation programs in North America. Stormceptor has been performance verified through numerous verification programs, including;

- NJCAT
- Washington ECOLOGY
- EN858 Class 2

PCSWMM for Stormceptor – *Advanced online sizing & design software*

The most accurate, easy to use design tool available.

- This continuous simulation modeling software combines localized rainfall data from over 1,900 weather stations across North America allowing for region-specific design with a selection of particle sizes to design the best Stormceptor for your site
- Within a single project, multiple Stormceptor units can be sized and the information revisited as project parameters change
- Provides a summary report that includes projected performance calculations

www.imbriumsystems.com/PCSWMMforStormceptor

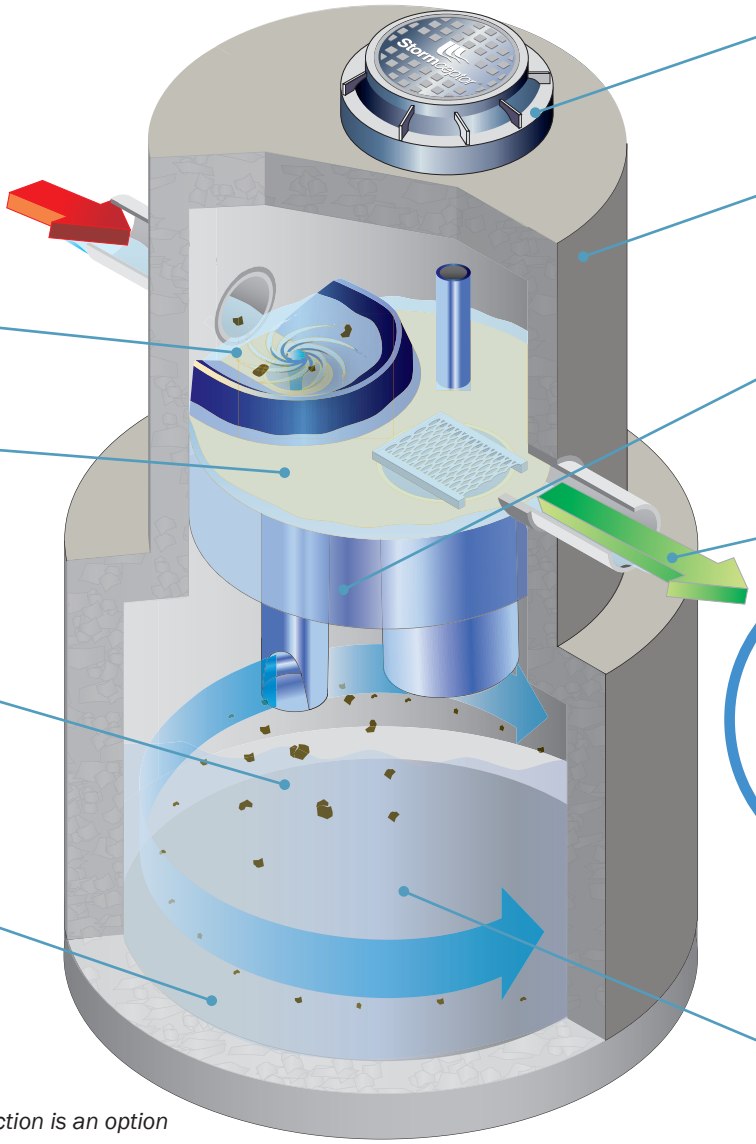
With over 40,000 units operating worldwide, Stormceptor performs and protects every day, in every storm.

CANADA: (800) 565 4801 | USA: (888) 279 8826 | INTERNATIONAL: +1 (416) 960 9900

imbrium®
www.imbriumsystems.com

Stormceptor® STC

The calm *during* the storm



* *Fiberglass construction is an option*

Easy to install

Small footprint saves time and money with limited disruption to your site.

Seamless

Minimal drop between inlet and outlet pipes makes Stormceptor ideal for retrofits and new development projects.

Flexible

Multiple inlets can connect to a single unit.

Can be used as a bend structure.

1.0 GENERAL INFORMATION

1.1 INTRODUCTION

The goal of the Operation and Maintenance Plan is not only to protect resources on-site or nearby, but also to protect resources in the region that may be affected by the activities in the project area. The Plan is in accordance with the requirements of the City of Lynn and the Massachusetts Department of Environmental Protection. An Operations and Maintenance Log is included at the end of this document.

The Stormwater Management System Owner is:

Massachusetts Department of Conservation and Recreation

The Stormwater Management System Owner will perform the inspections and maintenance as outlined in the Operations and Maintenance Plan with their own maintenance personnel.

2.0 MAINTENANCE AGREEMENT

2.1 RESPONSIBLE FOR OPERATION AND MAINTENANCE (24/7 CONTACT)

To be determined.

2.2 RESPONSIBLE FOR FINANCING MAINTENANCE AND EMERGENCY REPAIRS

To be determined.

2.3 INSPECTION AND MAINTENANCE LOG

The inspection and maintenance log is provided as an attachment to the Operation and Maintenance Plan.

You created this PDF from an application that is not licensed to print to novaPDF printer (http://www.novapdf.com)

3.0 OPERATION AND MAINTENANCE PLAN

Non-structural pollutant controls include encouraging the use of salt substitutes for maintenance of parking and roadway areas, sweeping of driveways and parking areas on a regular basis, and use of slow-release organic fertilizers on landscaped areas to limit the amount of nutrients that could enter downstream resource areas. Structural pollutant controls include catch basins equipped with deep sumps and hoods, a water quality unit designed to separate gas, oil, and suspended solids from stormwater, and a subsurface infiltration system.

3.1 NON-STRUCTURAL POLLUTANT CONTROLS

The proposed stormwater management system is designed to protect the runoff water quality through the removal of sediment and pollutants. Non-structural pollutant controls used to separate, and capture stormwater pollutants are described below.

3.1.1 Standard Asphalt Pavement Maintenance

Long-term management practices will include regular sweeping of driveways and parking areas. The sweeping/vacuuming program will remove contaminants directly from paved surfaces to prevent their release into the drainage system. Street sweeping/vacuuming has been shown to be an effective initial treatment for reducing pollutant loadings in stormwater.

Sweep or vacuum standard asphalt pavement areas at least two times per year with a commercial cleaning unit and properly dispose of removed material.

Recommended sweeping schedule:

- Oct/Nov
- Apr/May

More frequent sweeping of paved surfaces will result in less accumulation in catch basins, less cleaning of subsurface structures, and less disposal costs.

3.1.2 Deicing Chemicals

Use of road salt (sodium chloride) for maintenance of parking and roadway areas will be limited, and use of salt substitutes, such as calcium magnesium acetate (CMA), will be encouraged. These practices will limit the amount of dissolved pollutants in runoff and minimize potential impacts of deicing chemicals on downstream resource areas.

3.1.3 Fertilizer

Slow-release organic fertilizers will be used in the landscaped areas to limit the amount of nutrients that could enter downstream resource areas. Fertilizer use will be reduced once proposed landscaping is established.

You created this PDF from an application that is not licensed to print to novaPDF printer (http://www.novapdf.com)

3.2 STRUCTURAL POLLUTANT CONTROLS

The proposed stormwater management system is designed to protect runoff water quality through the removal of sediment and pollutants. Minimum operation and maintenance requirements for the structural pollutant controls used to separate and capture stormwater pollutants are described below.

3.2.1 Catch Basins

Catch basins on Site will be equipped with deep sumps (minimum 4-feet) and hooded outlets to trap debris, sediments, and floating contaminants, which are the largest constituents of urban runoff. These practices, in coordination with regular street sweeping and minimal use of sand, comprises a multi-level source control approach that prevents sand, sediment, and litter from entering the drainage basins and ultimately the resource area. Regular maintenance and cleaning of catch basins will assure adequate performance of these structures.

The proper removal of sediments and associated pollutants and trash occurs only when catch basin inlets and sumps are cleaned out regularly. The more frequent the cleaning, the less likely sediments will be re-suspended and subsequently discharged. In addition, frequent cleaning also results in more volume available for future deposition and enhances the overall performance. As noted in the pavement O&M section, more frequent sweeping of paved surfaces will result in less accumulation in catch basins, less cleaning of subsurface structures, and less disposal costs.

Inspections and Cleaning

- All catch basins shall be inspected once per year in accordance with DCR NPDES permit for stormwater management..
- Sediment and/or floatable pollutants must also be removed whenever the depth of deposits is greater than or equal to 50% storage capacity. All sediment/pollutants shall be disposed of at an approved offsite facility in accordance with all applicable regulations.
- Any structural damage or other indication of malfunction will be reported to DCR Engineering.
- During colder periods, the catch basin grates must be kept free of snow and ice.
- During warmer periods, the catch basin grates must be kept free of leaves, litter, sand, and debris.

3.2.2 Drainage Manholes

Drainage manholes shall be inspected to remove any sediment build up and to remove any obstructions to the runoff flow. Special care shall be taken to inspect the orifices and above the weir for any potential obstructions.

Inspections and Cleaning

- All drainage manhole structures shall be inspected once per year in accordance with DCR NPDES permit for stormwater management.
- Sediment must be removed whenever the depth of deposits is greater than or equal to 50% storage capacity. All sediment/pollutants shall be disposed of at an approved offsite facility in accordance with all applicable regulations.
- Any structural damage or other indication of malfunction will be reported to DCR Engineering.

You created this PDF from an application that is not licensed to print to novaPDF printer (http://www.novapdf.com)

3.2.3 Proprietary Separators

A proprietary separator is a flow-through structure with a settling or separation unit to remove sediments and other pollutants. They typically use the power of swirling or flowing water to separate floatable and coarser sediments, are typically designed and manufactured by private businesses, and come in different sizes to accommodate different design storms and flow conditions.

Long-Term Maintenance

- Inspect and clean these units in strict accordance with manufacturers' recommendations and requirements. Clean the units using the method specified by the manufacturer.
- Vactor trucks are typically used to clean these units. Clamshell buckets typically used for cleaning catch basins are almost never allowed by manufacturers.
- Sometimes it will be necessary to remove sediment manually.

3.2.4 Vegetated Areas

Although not a structural component of the drainage system, the maintenance of vegetated areas may affect the functioning of stormwater management practices. This includes the health/density of vegetative cover and activities such as the application and disposal of lawn and garden care products, disposal of leaves and yard trimmings.

- Inspect planted areas on a semi-annual basis and remove any litter.
- Maintain planted areas adjacent to pavement to prevent soil washout.
- Immediately clean any soil deposited on pavement.
- Re-install plant material in bare areas; install appropriate erosion control measures when native soil is exposed or erosion channels are forming.
- Plant alternative shrubs or perennials in the event of unsuccessful establishment.

Initial Post-Construction Inspection

During the initial period of vegetation establishment pruning and weeding are required twice in first year by contractor or owner. Any dead vegetation/plantings found after the first year will be replaced. Proper mulching is mandatory and regular watering may be required initially to ensure proper establishment of new vegetation.

Long-Term Maintenance

The planted areas will be inspected on a semi-annual basis and any litter removed. Weeds and invasive plant species will be removed by hand. Maintain planted areas adjacent to pavement to prevent soil washout. Immediately clean any soil deposits on pavement. Leaf litter and other detritus shall be removed twice per year. If needed to maintain aesthetic appearance, perennial plantings may be trimmed at the end of the growing season.

Trees and shrubs will be inspected twice per year to evaluate health and attended to as necessary. Seeded ground cover or grass areas shall not receive mulching. Re-install plant material in bare areas; install appropriate erosion control measures when native soil is exposed, or erosion channels are forming. Plant alternative shrubs or perennials in the event of unsuccessful establishment.

You created this PDF from an application that is not licensed to print to novaPDF printer (http://www.novapdf.com)

Fertilizer usage will be avoided. If deemed necessary, slow release fertilizer will be used. Fertilizer will be used to begin the establishment of vegetation in bare or damaged areas but will not be applied on a regular basis unless necessary. Inspect planted areas on a semi-annual basis and remove any litter.

- Maintain planted areas adjacent to pavement to prevent soil washout.
- Immediately clean any soil deposited on pavement.
- Re-install plant material in bare areas; install appropriate erosion control measures when native soil is exposed or erosion channels are forming.
- Plant alternative shrubs or perennials in the event of unsuccessful establishment.

Pesticide/Herbicide Usage

The Redevelopment Project will require that landscaping maintenance contractors implement a program to test soils at the site annually and to limit the amount of fertilizer, pesticides, and herbicides to only what is needed to maintain healthy plant materials and landscaped areas.

No pesticides or herbicides are to be used unless a single spot treatment is required for a specific control application.

Fertilizer usage will be avoided. If deemed necessary, slow release fertilizer will be used, and applied only in the minimum amounts recommended by the manufacturer. Once applied, the fertilizer will be worked into the soil to limit exposure to stormwater. Storage will be in a covered area; and the contents of any partially used bags will be transferred to a sealable, plastic bin to avoid spills.

Fertilizer will be used to begin the establishment of vegetation in bare or damaged areas, but will not be applied on a regular basis unless necessary.

Records of soil management, application dates, planting dates, preventive measures, treatments, and other appropriate information should be kept. This information will be used as a reference when fertilizer/pesticide/herbicide management decisions in the future.

3.3 SPILL PREVENTION AND CONTROL PLAN

The Property Manager will be responsible for training of people in the proper handling and cleanup of spilled materials. No spilled hazardous materials or hazardous wastes will be allowed to come in contact with stormwater discharges. If such contact occurs, the stormwater discharge will be contained on site until appropriate measures in compliance with state and federal regulations are taken to dispose of such contaminated stormwater.

In order to minimize the potential for a spill of hazardous materials to come into contact with stormwater, the following steps will be implemented:

1. All materials with hazardous properties (such as pesticides, petroleum products, fertilizers, detergents, construction chemicals, acids, paints, paint solvents, cleaning solvents, additives for soil stabilization, concrete curing compounds and additives, etc.) will be stored in a secure location, with their lids on, preferably under cover, when not in use.
2. The minimum practical quantity of all such materials will be kept on the site.

You created this PDF from an application that is not licensed to print to novaPDF printer (http://www.novapdf.com)

3. A spill control and containment kit (containing, for example, absorbent materials, acid neutralizing powder, brooms, dust pans, mops, rags, gloves, goggles, plastic, and metal trash containers, etc.) will be provided at the maintenance area of the site.
4. Manufacturers recommended methods for spill cleanup will be clearly posted and site personnel will be trained regarding these procedures and the location of the information and cleanup supplies.

In the event of a spill, the following procedures should be followed:

1. All spills will be cleaned up immediately after discovery.
2. The spill area will be kept well ventilated and personnel will wear appropriate protective clothing to prevent injury from contact with the hazardous substances.
3. The Owner and Property Manager will be notified immediately.
4. Spills of toxic or hazardous materials will be reported to the appropriate federal, state, and/or local government agency, regardless of the size of the spill.
5. Please review the "Spill Containment Plan" for location of basin overflow locations within the vegetated swales to be capped within the vicinity of the spill.

The Property Manager will be the spill prevention and response coordinator. He will designate the individuals who will receive spill prevention and response training. These individuals will each become responsible for a particular phase of prevention and response. The names of these personnel will be posted in the material storage area and other applicable areas onsite.

3.4 GOOD HOUSEKEEPING

The following measures will be employed to control potential sources of contamination and prevent pollution.

3.4.1 Deicing

To prevent increased pollutant concentrations in stormwater discharges, the amount of road salt applied will be controlled.

3.4.2 Snow Storage/Disposal

Snow storage/disposal will be allowed in landscaped islands and underutilized parking spaces. Areas designated for snow storage within the limits of the porous pavement will require additional street sweeping to ensure that the pavement system does not clog following periods of snow melting.

3.4.3 Materials Management/Housekeeping Practices

The following product-specific practices will be followed on-site. Recommendations are provided for petroleum products, fertilizers, solvents, paints, and other hazardous substances, and concrete.

Petroleum Products

You created this PDF from an application that is not licensed to print to novaPDF printer (http://www.novapdf.com)

No vehicle maintenance or handling of petroleum products will occur on site. No petroleum products or asphalt substances will be stored on-site.

Solvents, Paints, and other Hazardous Substances

All containers will be tightly sealed and stored indoors when not required for use. Excess materials will not be discharged to the storm sewer system but will be properly disposed according to manufacturer's instructions or state and local regulations. Outside storage on the property will be prohibited.

3.4.4 Spill Prevention Practices

The Redevelopment Project will implement a spill prevention program that will include stormwater contamination assessment, flow diversion, record keeping, internal reporting, employee training, and preventive maintenance. The following specific practices will be followed for spill control, notification, and cleanup.

- Manufacturer's recommended methods for spill cleanup for any chemicals used or stored on site will be clearly posted and site personnel will be informed of the procedures and the location of the information and cleanup supplies.
- Materials and equipment necessary for spill cleanup will be kept in the material storage area on-site. Equipment and materials may include, as appropriate, shovels, wheelbarrows, brooms, dust pans, mops, rags, gloves, goggles, kitty litter or Speedi-Dry, sand, sawdust, and plastic and metal trash containers specifically designated for this purpose.
- All spills will be cleaned up immediately after discovery.
- The spill area will be kept well ventilated and personnel will wear protective clothing to prevent injury from contact with a hazardous substance.
- Spills of toxic or hazardous material in excess of reportable quantities, as established in the Massachusetts Contingency Plan (MCP), will be reported to the Massachusetts Department of Environmental Protection Division

EXECUTIVE SUMMARY

This report summarizes the results of a visual investigation performed by Foth-CLE Engineering Group (Foth-CLE) at the Lynn Heritage State Park, Lynn, MA on August 09, 2018 & October 17, 2018. The Lynn Heritage State Park is owned by the Massachusetts Department of Conservation and Recreation (DCR). Foth-CLE teamed with Fathom Diving (Fathom) on October 04, 2018 to perform the underwater structural inspection of the marine infrastructure. The intent of the inspection was to determine and document baseline existing conditions of the waterfront structures and when applicable, provide recommendations for repair. Foth - CLE's inspection scope was limited to the stone revetments, concrete seawall, pile supported timber pavilion, pile supported timber boardwalk, and grade beam supported timber boardwalk.

The attached inspection plans detail existing conditions and areas of concern observed by Foth-CLE. The report was drafted by Jonathan Delgado, Scott Skuncik, P.E., and Jennifer Green, P.E. and provides findings/assessments, general advice, and repair concepts, and is based on engineering principals as they relate to Foth-CLE's condition assessment inspection. Questions or concerns regarding this report or the contents contained herein should be directed to Foth-CLE at (508) 748-0937.

INTRODUCTION/SITE DESCRIPTION

The Lynn Heritage State Park is owned by the Massachusetts Department of Conservation and Recreation (DCR). The project site is located off of Lynnway in the City of Lynn, MA just west of the Nahant Town Line. It is believed that the existing infrastructure may have been constructed on fill sourced from the remains of the 1973 Chelsea fire. The five± (5) acre park consists of an approximate 20,000 square foot parking area with walking paths and a small seating area, along with a Marina and condominium complex.

The existing Heritage Park infrastructure includes stone revetments, a concrete seawall, a pile supported timber pavilion, a pile supported timber boardwalk, and a grade beam supported timber boardwalk as shown in Figure 1. The existing coastal protection and access structures extend a total length of approximately 2,031 linear feet, along the shoreline of Lynn Harbor. The Seaport Landing Marina, owned by the City of Lynn, is located along the east side of the 154 Lynnway condominium building. The entire shoreline is armored by a continuous granite revetment, referred to herein as the West, South and East Revetment. The marina can be accessed from both the southern and eastern boardwalks, which run along the shoreline. Additionally, a timber boardwalk and timber pavilion structure were constructed on top of the southern revetment. The timber boardwalk continues along the shoreline on top of the eastern revetment, which wraps around the condominium and office complex. It is reported that the condominium buildings, are founded on piles.

Figure 1: Lynn Waterfront Heritage Park Inspection Scope

SUMMARY OF FINDINGS

Presented below is a detailed description of the conditions observed at the project site, along with structural assessments and recommendations by Foth-CLE. The structural assessments provided are limited to topside visual investigations conducted by Foth-CLE on August 09, 2018 & October 17, 2018. Foth-CLE teamed with Fathom Diving (Fathom) on October 04, 2018 to perform the underwater structural inspection of the pile supported timber boardwalk A site inspection plan, as prepared by Foth-CLE utilizing an existing conditions plan of the project site, prepared and provided to Foth-CLE by Stantec and Survey & Mapping Consultants, is provided in Attachment A.

Stone Revetments:

Description of Structure:

The stone revetments provide coastal protection to Lynn Heritage State Park and its infrastructure, consisting of paved walkways, landscaped areas, utilities, timber boardwalks, and two condominium complexes. The existing Western Stone Revetment extends approximately 777 linear feet along the western shoreline of Lynn Harbor. This structure begins at Station 11+33 and ends at Station 19+10. The existing Eastern Stone Revetment, beginning at Station 22+10 and ending at Station 31+64, extends approximately 954 linear feet along the eastern shoreline of Lynn Harbor. The eastern revetment wraps around along the seaward face of the existing grade beam supported timber boardwalk. Both stone revetments are comprised of 2-4 ton angular stones, placed with a smooth face finish. At six (6) locations, outfall pipes of various diameters and materials extend through the face of the granite revetment.

Located between the two stone revetments, along the southern shoreline, is a concrete seawall with southern stone revetment that extends out from the face of the seawall. The revetment and seawall extend approximately 300 linear feet, beginning at Station 19+10 and ending at Station 22+10. The southern stone revetment is also comprised of 2-4 ton angular stones, with a smooth face finish. The stone revetment is placed on top of a bedding material with a filter fabric. Based on historical reference information, the top of the existing concrete seawall is at Elevation +12.19 NAVD88 (Elevation +13.0 NVGD). The existing concrete seawall runs along the landward side of the property parallel to the pile supported boardwalk. The original design drawings indicate that the concrete seawall is 7-feet high by 1-foot thick and is founded on a 5-foot wide by 1.5-foot thick reinforced concrete footing, set on a 6-foot wide by 1-foot thick layer of crushed stone. Reference information also indicates that the concrete seawall contains 4-inch diameter weep holes, spaced approximately 10-feet on center.

Based on historical design drawings of the Lynn Heritage State Park, dated September 1982, the existing revetment slope protection was originally designed to be 3-feet thick, underlain with 12-inches of bedding material and filter fabric. Along the Western Stone Revetment, between Stations 11+33 and 19+10, historical drawings indicate that the revetment was placed at a 2 horizontal to 1 vertical slope. The historic drawings also indicate that the top of the slope is was set at Elevation +12.19 NAVD88 (Elevation +13.0 NVGD) and the toe of the slope was set to terminate at the bottom of the brown organic silt later (removed through dredging) and top of the medium to stiff clay layer. Along the Eastern Stone Revetment, between Stations 22+11 to 24+98 and Stations 27+09 to 29+96, historical documents indicate that the revetment was placed at a 1.5 horizontal to 1 vertical slope. The historical drawings also indicate that the top of the Eastern Stone Revetment slope was set at Elevation +12.19 NAVD88 (Elevation +13.0 NVGD) and

SUMMARY OF FINDINGS

Presented below is a detailed description of the conditions observed at the project site, along with structural assessments and recommendations by Foth-CLE. The structural assessments provided are limited to topside visual investigations conducted by Foth-CLE on August 09, 2018 & October 17, 2018. Foth-CLE teamed with Fathom Diving (Fathom) on October 04, 2018 to perform the underwater structural inspection of the pile supported timber boardwalk A site inspection plan, as prepared by Foth-CLE utilizing an existing conditions plan of the project site, prepared and provided to Foth-CLE by Stantec and Survey & Mapping Consultants, is provided in Attachment A.

Stone Revetments:

Description of Structure:

The stone revetments provide coastal protection to Lynn Heritage State Park and its infrastructure, consisting of paved walkways, landscaped areas, utilities, timber boardwalks, and two condominium complexes. The existing Western Stone Revetment extends approximately 777 linear feet along the western shoreline of Lynn Harbor. This structure begins at Station 11+33 and ends at Station 19+10. The existing Eastern Stone Revetment, beginning at Station 22+10 and ending at Station 31+64, extends approximately 954 linear feet along the eastern shoreline of Lynn Harbor. The eastern revetment wraps around along the seaward face of the existing grade beam supported timber boardwalk. Both stone revetments are comprised of 2-4 ton angular stones, placed with a smooth face finish. At six (6) locations, outfall pipes of various diameters and materials extend through the face of the granite revetment.

Located between the two stone revetments, along the southern shoreline, is a concrete seawall with southern stone revetment that extends out from the face of the seawall. The revetment and seawall extend approximately 300 linear feet, beginning at Station 19+10 and ending at Station 22+10. The southern stone revetment is also comprised of 2-4 ton angular stones, with a smooth face finish. The stone revetment is placed on top of a bedding material with a filter fabric. Based on historical reference information, the top of the existing concrete seawall is at Elevation +12.19 NAVD88 (Elevation +13.0 NVGD). The existing concrete seawall runs along the landward side of the property parallel to the pile supported boardwalk. The original design drawings indicate that the concrete seawall is 7-feet high by 1-foot thick and is founded on a 5-foot wide by 1.5-foot thick reinforced concrete footing, set on a 6-foot wide by 1-foot thick layer of crushed stone. Reference information also indicates that the concrete seawall contains 4-inch diameter weep holes, spaced approximately 10-feet on center.

Based on historical design drawings of the Lynn Heritage State Park, dated September 1982, the existing revetment slope protection was originally designed to be 3-feet thick, underlain with 12-inches of bedding material and filter fabric. Along the Western Stone Revetment, between Stations 11+33 and 19+10, historical drawings indicate that the revetment was placed at a 2 horizontal to 1 vertical slope. The historic drawings also indicate that the top of the slope is was set at Elevation +12.19 NAVD88 (Elevation +13.0 NVGD) and the toe of the slope was set to terminate at the bottom of the brown organic silt later (removed through dredging) and top of the medium to stiff clay layer. Along the Eastern Stone Revetment, between Stations 22+11 to 24+98 and Stations 27+09 to 29+96, historical documents indicate that the revetment was placed at a 1.5 horizontal to 1 vertical slope. The historical drawings also indicate that the top of the Eastern Stone Revetment slope was set at Elevation +12.19 NAVD88 (Elevation +13.0 NVGD) and

15 Creek Road | Marion, Massachusetts 02738
t: 508.748.0937 | 800.668.3220 | f: 508.748.1363

the toe of the slope set to terminate at the bottom of the brown organic silt later (removed through dredging) and top of the medium to stiff clay layer. Between Stations 24+98 and 27+09, historical documents indicate that the Eastern Stone Revetment was placed at a 2 horizontal to 1 vertical slope. Dredging is assumed to have occurred around the same time as revetment construction and at these locations, historic documents indicate that he toe was set to terminate at the bottom of the brown organic silt later (removed through dredging) and top of the medium to stiff clay layer. Between Stations 19+10 and 22+11, historical reference drawings indicate that the Southern Stone Revetment was placed at a 2 horizontal to 1 vertical slope, with the top of the slope starting at approximately the same elevation as the top of the seawall footing elevation and the toe of the slope terminating at Elevation -10.81 NAVD88 (Elevation -10.0 NGVD).

Observed Conditions: Western Stone Revetment – Station 11+33 to Station 19+10

The Western Stone Revetment was observed to be in ***"Fair"*** condition throughout its length. The Western Stone Revetment exhibited localized areas of settlement caused by a bearing capacity failure at the toe of the slope. This failure has resulted in lateral displacement of the armor stone along slope and separation from the bench layer causing erosion and loss of material *(Refer to Photographs 7 through 9)*. Evidence of the subsequent vertical settlement can been seen between Stations 15+00 to 19+00, where the paved walkway and ground surface behind were observed to have rolling, uneven settlement with differential vertical displacements of up to 2-feet *(Refer to Photographs 2, 7, 8, & 9)*. Between Stations 12+00 through 13+00 and 15+00 through 19+00, additional visual evidence of the bearing capacity failure can also be seen in where gaps, as large as 3-feet wide, have developed between the cap stones and the slope *(Refer to Photographs 1 through 6)* along with a reverse pitch at one of the outfall pipes. Four (4) existing outfall pipes that discharge from the revetment were observed approximately at Station 11+50, Station 15+50, Station 16+25 and Station 18+10. Foth-CLE also observed subsidence of the paved walkway and lawn areas. This subsidence is likely due to decomposition of subsurface debris sourced from the 1973 Chelsea fire and not as a result of coastal processes and slope failures.

Western Stone Revetment Structural Assessment:

The stone revetment structures were found to be in "Fair" condition. Foth-CLE does not anticipate any imminent structural failures based on conditions observed.

Western Stone Revetment Recommendations:

Foth-CLE recommends further evaluation of the revetment to confirm if existing stone size and toe depth is adequate for the anticipated environmental design (wind, wave and current) loads and to determine optimal crest elevation to prevent future overtopping and design of repairs if deficiencies are found. If no structural improvements are needed, alternatives should be developed to address aesthetics.

15 Creek Road | Marion, Massachusetts 02738
t: 508.748.0937 | 800.668.3220 | f: 508.748.1363

Observed Conditions: Eastern Stone Revetment – Station 22+10 to Station 31+64

The Eastern Stone Revetment was observed to be in ***"Fair"*** condition throughout its length *(Refer to Photographs 10 through 12)*. Between 22+00 through Station 26+00 and Station 30+50 through Station 31+64, Foth-CLE observed localized areas of settlement caused by a bearing capacity failure at the toe of the slope and decomposition of the fill material *(Refer to Photograph 14)*. This has resulted in lateral displacement of the armor stone along slope and separation from the bench layer causing erosion and loss of material *(Refer to Photographs 7 through 9)*. Visual evidence of the localized bearing failure can be seen where a separation has developed between the revetment and the timber boardwalk. At Station 31+00, Foth-CLE observed exposed filter fabric (*Refer to Photograph 13).*

Eastern Stone Revetment Structural Assessment:

The stone revetment structures were found to be in "Fair" condition. Foth-CLE does not anticipate any imminent structural failures based on conditions observed.

Eastern Stone Revetment Recommendations:

Foth-CLE recommends further evaluation of the revetment to confirm if existing stone size and toe depth is adequate for the anticipated environmental design (wind, wave and current) loads and to determine design of repairs if deficiencies are found. If no structural improvements are needed, alternatives should be developed to address aesthetics.

15 Creek Road | Marion, Massachusetts 02738
t: 508.748.0937 | 800.668.3220 | f: 508.748.1363

Observed Conditions: Southern Stone Revetment & Concrete Seawall - Station 19+10 to Station 22+10

The Southern Stone Revetment was observed to be in "Fair" condition while the Concrete Seawall was observed to be in ***"Poor"*** condition. Similar to the Western and Eastern Stone Revetments, the Southern Stone Revetment has exhibited localized areas of settlement caused by a bearing capacity failure at the toe of the slope and decomposition of the fill material, primarily between Station 19+57 and Station 22+00 (*Refer to Photograph 23 and 24)*. This failure has resulted in lateral displacement of the armor stone along the slope and separation from the bench layer causing erosion and loss of material.

While the impact of the revetment stone displacement and settlement, as a means to protect the slope, is minimal, the impact on the seawall is significant. Because the wall footing is located at approximately the same elevation as the revetment crest, the revetment settlement and stone displacement has resulted in exposure of the concrete wall footing. This exposure to coastal processes has caused localized areas of undermining along the concrete wall footing, primarily between Station 19+57 and Station 19+77, with less severe but still notable undermining observed between Station 19+77 and Station 20+38 and between Station 21+36 to Station 22+10. *(Refer to Photograph 15)*. Foth-CLE also documented minor cracking throughout the length of the concrete seawall stem *(Refer to Photographs 16, 17, & 20*) with more severe cracking and spalling observed at Station 21+72 (*Refer to Photographs 18 & 19*).

These observations are indicative of both vertical settlement and possible rotation resulting from exposure and footing undermining. Vertical settlement was also indicated by differences in top of structure elevations between the concrete seawall and the adjacent walkway. Additionally, Foth-CLE observed open gaps at seawall expansion joints at Station 19+36, Station 19+77, and Station 21+32. At these locations, material loss was noted though gaps. Where the concrete wall returns at the building, Station 21+77, Foth-CLE observed vertical settlement of the concrete seawall, grade beam supported boardwalk or both which has resulted in variations in elevations between the two adjacent structures *(Refer to Photograph 21 and 22)*. The top of structures, originally shown at Elevation +13.0 (NGVD) on the reference drawings, no longer matches. One additional indication of settlement is at Sta. 20+62, where Foth-CLE observed the existing 24-inch diameter outfall pipe pitched landward.

Southern Stone Revetment & Concrete Seawall Structural Assessment:

The stone revetment structures were found to be in "Poor" condition. Deficiencies should be addressed to prevent seawall failure and ensure that the existing function of the seawall is maintained.

Southern Stone Revetment & Concrete Seawall Recommendations:

Foth-CLE recommends further evaluation of the revetment to confirm if existing stone size and toe depth is adequate for the anticipated environmental design (wind, wave and current) loads and to determine design of repairs if deficiencies are found. If no structural improvements are needed, alternatives should be developed to address aesthetics. Foth-CLE also recommends development of design alternatives to address the concrete seawall existing conditions. These alternatives could include strengthening, replacement or retrofit of the existing concrete seawall structure.

Pile Supported Timber Pavilion:

Description of Structure:

The Pile Supported Timber Pavilion provides overhead cover for a seating area overlooking Lynn Harbor. The existing timber pile supported timber pavilion is located at the west end of the existing pile supported timber boardwalk, along the southern shoreline of the project site. The pavilion is approximately 40 feet long by 40 feet wide (1,600 square feet). Each of the four (4) columns are comprised of three (3) 5-inch square hollow steel tubes, which support the 5-inch wide by 22–inch deep perimeter timber header beams. The roof is supported by 5-inch wide by 22-inch deep timber rafters along with 5-inch wide by 18-inch deep and 5-inch wide by 10-inch deep timber purlins. The roof sheathing is made up of 1-inch thick by 5-inch wide timber boards, topped with asphalt shingles.

Observed Conditions:

These observed conditions pertain to the pavilion superstructure only. Inspection of timber pavilion support piles are included with the timber pile supported boardwalk. During the inspection of the Pile Supported Timber Pavilion, Foth-CLE observed minor dry rot conditions at the location where the timber sloped roof edge meets the roof flashing and soffit. All hardware material was observed to be sound, without indications of corrosion or section loss. No additional areas of deterioration were observed *(Refer to Photographs 25 through 27)*.

Structural Assessment:

Overall, the condition of the pile supported timber pavilion was observed to be in ***"Satisfactory"*** condition with no structural elements requiring immediate repair.

Recommendations:

Given the observed conditions during the inspection, Foth-CLE does not recommend any immediate repairs. Within the next five (5), Foth-CLE recommends replacement of the asphalt shingles and flashing to ensure adequate continued protection of the structural timber framing members.

Pile Supported Timber Boardwalk:

Description of Structure:

The existing Pile Supported Timber Boardwalk is located along the southern shoreline of the project site, between Station 19+10 and Station 22+10. The boardwalk is approximately 36 feet wide by 300 feet long and is constructed of timber material. The existing timber boardwalk structure is comprised of 4-inch thick by 12-inch wide deck timbers set on top of 8-inch wide by 14-inch deep timber stringers, spaced approximately 2-feet on center. The timber stringers are set on 12-inch by 12-inch timber pile caps, supported by 12-inch diameter southern yellow pine creosote pressure treated timber piles. The piles are braced with 3-inch thick by 8-inch wide diagonal timber bracing, as shown in Figure 2 below.

Approximately thirty-seven (37), 12-inch diameter timber fender piles exist along the seaward edge of the boardwalk, typically one (1) fender pile per bent. All timber material is southern yellow pine, CCA or ACA treated timber. Typical connections consist of ½-inch diameter and ¾-inch diameter drift pins and 2-2GA 7-inch decking spikes. All hardware was observed to be hot dipped galvanized. A timber and steel pedestrian railing runs along the seaward edge of the boardwalk and is comprised of 4-inch by 12-inch timber posts with a horizontal timber base rail/seat and two horizontal steel pipe rails. The scope of the Foth-CLE inspection included visual observation and inspection of 312, 12-inch diameter timber piles, which includes the 37 timber fender piles and ±300 linear feet of timber boardwalk structure.

Foth-CLE included the two (2) existing timber gangway platforms as part of the pile supported timber boardwalk inspection scope. One of the timber gangway platforms located along the southern side of the boardwalk (Station 20+00) and provides gangway access to the abandoned floating docks. The second timber gangway platform is located at the southeastern corner of the boardwalk (Station 22+00). This gangway structure currently provides gangway access to the floating dock system owned by the City of Lynn. Both timber gangway platforms appear to be of similar construction as the Pile Supported Timber Boardwalk.

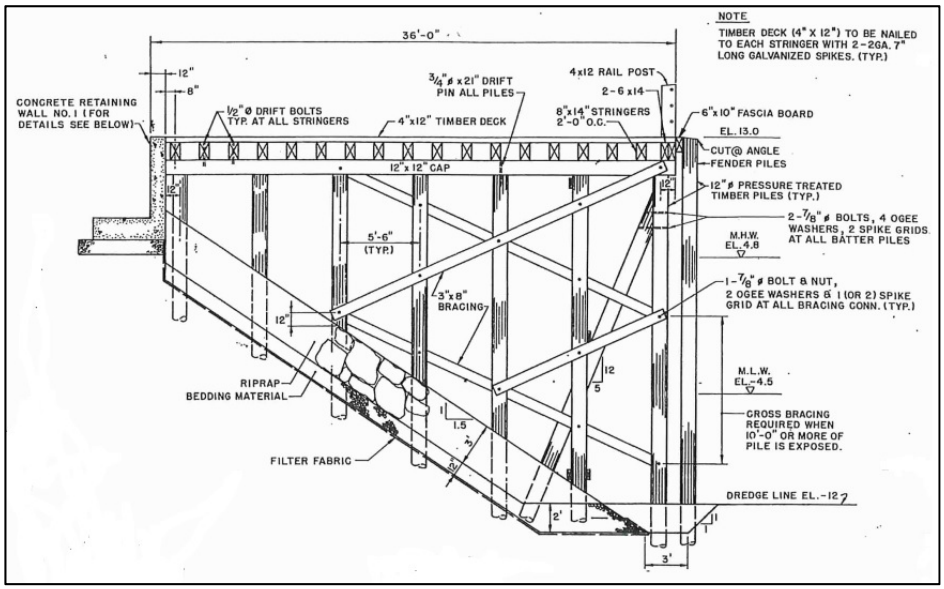

Figure 2: Lynn Waterfront Heritage Park Existing Pile Supported Timber Boardwalk Typical Cross-Section

15 Creek Road | Marion, Massachusetts 02738
t: 508.748.0937 | 800.668.3220 | f: 508.748.1363

Existing reference drawings dated 1982 along with historical imagery obtained from Google Earth, show floating docks and a paddle boat dock adjacent to the western side of the existing Pile Supported Timber Boardwalk, as well as, floating docks along the southern side of the existing pile supported timber boardwalk, as seen in Figures 3 through 7 below. According to the historical imagery, the structures to the west of the existing Pile Supported Timber Boardwalk were abandoned sometime prior to 1995 and between the years 1982 and 1995, the floating dock structure to the south of the existing Pile Supported Timber Boardwalk was constructed.

This floating dock structure located to the south of the existing Pile Supported Timber Boardwalk was then abandoned sometime prior to 2013. These structures (to the west or south of the existing Pile Supported Timber Boardwalk) are no longer existing aside from the timber piles remaining at the offshore side of the existing boardwalk at the side. The remaining piles include six (6) timber dolphin clusters, each consisting of seven (7) 12-inch timber piles along in addition to approximately sixty-five (65) timber piles that were originally used to anchor floats at the existing abandoned marina. The scope of work for this inspection did not include the inspection of these remaining timber piles.

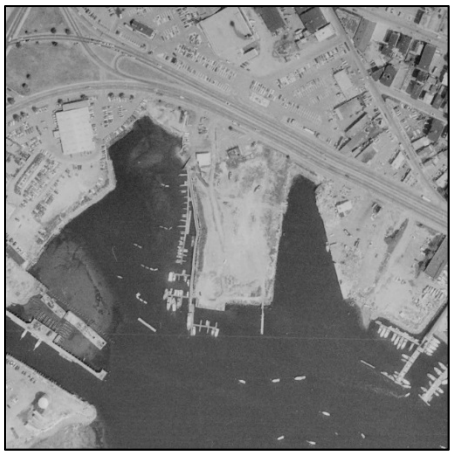

Figure 7: Lynn Waterfront Heritage Park Historical Image Dated 1971.

Observed Conditions:

The topside inspection indicated the structure to generally be in stable condition, with no observed indications of settlement. Given the structure's age, typical deterioration was observed throughout the structure. Areas of the decking and handrails also showed signs of deterioration throughout the structure *(Refer to Photographs 28 through 31)*. A visual inspection of the handrail system indicated that approximately 10% percent of the timber posts exhibited rotting, cracking and checking. The timber decking was observed to have rotting and loose boards. Overall, the decking & handrail system was found to be in Fair condition.

Of the 312, 12-inch diameter timber piles included in the inspection scope, approximately 268 were found to have minimal defects and were given a condition rating of "Minor". Typical "Minor" pile deterioration observed included light abrasions less than ½-inch deep, checks/splits less than ½-inch wide, and evidence of marine borer activity and/or fungal decay. At a few locations, piles with a "Minor" condition rating were also observed to have longitudinal check/splits (Splintering), mostly likely caused by ice damage. All of the timber piles inspected, with the exception of the fender piles, were observed to have an existing 12 gauge, zinc pile cover at the tops of the piles. This pile cover was observed to be intact, without any notable deterioration.

Seven (7) piles were observed to have a "Moderate" condition rating, representing approximately 2% of the total number of piles inspected. The "Moderate" rating was assigned to piles with abrasions up to 2-inches deep, checks/splits greater than ½-inch wide, section loss up to 25% and corroded hardware *(Refer to Photograph 32)*. Twenty-eight (28) piles were assigned a "Major" condition rating because there was no positive bearing between the pile cap and the pile. For fender piles, a condition rating of "Severe" was assigned to several fender piles due conditions related to dry rot at the tops of piles which resulted section loss and compromised connection to the timber bulkhead *(Refer to Photograph 33)*.

During the visual inspection of the timber pile caps and timber stringers, Foth-CLE observed typical minor defects, expected given the age of the structure. There were no deterioration or structural cracking. The condition of the timber stringers was minor as these elements appeared

15 Creek Road | Marion, Massachusetts 02738
t: 508.748.0937 | 800.668.3220 | f: 508.748.1363

to be newly installed. The timber cross bracing was observed to be in "Severe" condition. Conditions associated with this "Severe" rating included missing or broken bracing members, missing hardware, failed connections and advanced deterioration. .

Structural Assessment:

In general, the overall condition of the Pile Supported Timber Boardwalk was observed to be in ***"Satisfactory"*** condition, throughout its length. Primary areas of significant deterioration include decking, handrail and bracing.

Recommendations:

Foth-CLE recommends that the handrail be replaced to meet ADA/AAB codes. Decking and bracing should be replaced as needed to ensure continued, function and aesthetics. Further structural evaluation is recommended for pile caps and piles. Foth-CLE will develop alternatives to restore bearing between pile caps and piles. Additionally, Foth-CLE will perform a structural evaluation determine capacity based on existing conditions as well as to determine service life remaining. Because fender piles are considered non-structural elements, originally installed to minimize damage from ice, replacement options will be evaluated assessing costs and aesthetics.

Grade Beam Supported Timber Boardwalk:#

Description of Structure:

The Grade Beam Supported Timber Boardwalk extends approximately 954 linear feet, beginning at Station 22+10 and ending at Station 31+64. The Grade Beam Supported Timber Boardwalk structure is comprised of 4-inch thick by 12-inch wide deck timbers set on 6-inch wide by 14-inch deep timber stringers, spaced approximately 7-feet on center. The stringers are supported by 12-inch wide by 54-inch deep concrete grade beams, spaced approximately 10-feet on center. The original design drawings indicate that the concrete grade beams bear on a 12-inch thick gravel bedding layer located approximately 4-feet below finish grade. Historical reports indicate that the site was used as a disposal area for material taken from the 1973 Chelsea fire. Foth-CLE opines that grade beams are fully or partially founded on this material.

All timber materials are southern yellow pine copper chromated arsenate (CCA) treated, and all of the hardware is hot dipped galvanized. Splice plate connections were observed at the perimeter stringers and are used to fasten the timber stringers to the wood nailers at the grade beam supports. A railing structure runs along the seaward edge of the Grade Beam Supported Timber Boardwalk and is comprised of 4-inch by 12-inch timber posts with a horizontal timber base rail/seat and two horizontal steel pipe rails.

As part of the inspection scope, Foth-CLE also inspected one (1) existing timber gangway platform. This timber platform is located along the southeastern side of the boardwalk at Station 22+36 and currently provides access to the floating dock system owned by the City of Lynn. The timber gangway platform appears to be of similar construction to the Grade Beam Supported Timber Boardwalk

Observed Conditions:

Foth-CLE observed that all six (6) 12-inch diameter timber piles that support the gangway platform were found to have minimal defects and as such were assigned a condition rating of "Minor". Typical observations included light abrasions less than ½-inch deep checks/splits less than ½-inch wide and evidence of marine borer activity and/ or fungal decay. All of the timber piles inspected were observed to have an existing 12 gauge, zinc pile cover at the tops of the piles. This pile cover was observed to be intact, without any notable deterioration. The inspection of the timber pile caps and timber stringers at the gangway platform revealed only minor typical expected defects, given the age of the timber, however, Foth-CLE did not observe any notable signs of deterioration or structural cracking The timber cross bracing was observed to be in "Moderate" condition, with only minor defects observed.

During the inspection of the Grade Beam Supported Timber Boardwalk, dry rot was observed on 15% of the timber decking in addition to loose deck boards *(Refer to Photographs 34 through 37)*. Similarly, a visual inspection of the handrail system indicated that approximately 10% percent of the timber posts exhibited significant cracking and checking in addition to rotting, allowing the steel pipe rail to come loose at some locations. Additionally, section loss and rotting was encountered on the bottom horizontal timber rail *(Refer to Photograph 38)*. At one location, Foth-CLE observed that the splice in top rail of the steel pipe rail was removed by cutting. The rail remaining is no longer functional and also presents a possible public safety hazard *(Refer to Photograph 39*. Overall the handrail system structure was assigned a "Severe "condition rating, as the existing conditions observed result in possible risk to public safety.

15 Creek Road | Marion, Massachusetts 02738
t: 508.748.0937 | 800.668.3220 | f: 508.748.1363

Foth-CLE noted that the Grade Beam Supported Timber Boardwalk profile appeared to be undulating from Station 22+10 to Station 25+60 ***(Refer to Photograph 40)***. Additional investigation into the timber boardwalk found a significant amount of differential settlement and variation in boardwalk deck grades, as documented in Table 1 below and shown in Photographs 41 & 42 Refer to Attachment B for complete summary of boardwalk deck grade differential settlement and variation.

Foth-CLE opines that this settlement is a result of decomposition of the historical fill material. In many cases, the Grade Beam Supported Timber Boardwalk is sloped resulting in deformed decking boards causing an uneven walking surface and potential tripping hazards. Settlement of the Grade Beam Supported Timber Boardwalk at Station 25+00 has resulted in elevation differences between adjacent grade beams ***(Refer to Photograph 43)***. Additionally, individual grade beams were observed to have differential settlement from one end to the other, along the width of the boardwalk. Between Station 22+10 and Station 25+00 evidence of this settlement was seen by the slope of the walkway surface and also at locations where Foth-CLE observed that parts of the timber stringers were no longer bearing on the concrete grade beams, forming a gap between grade beams and stringers***(Refer to Photographs 44 through 47)***.

At some locations, this gap was large enough to cause the lag bolts, which secure the timber stringers to the grade beams, to pull out. Between Station 25+60 and Station 31+64, no significant grade beam settlement was observed. Grade beams in this area remain level from end to end and have also maintained their original vertical alignment. Because of the timber decking, he timber stringers and concrete grade beams had very limited accessibility, and therefore were not inspected.

Table 1: *General Deck Grade Differential Settlement & Variation*

Grade Beam Number	Deck Grade Variation Measurements (10^{ths} of 1-Foot)	Grade Beam Number	Deck Grade Variation Measurements (10^{ths} of 1-Foot)
1	0.035	54	0.156
6	0.738	56	0.077
10	0.771	64	0.015
15	0.597	66	0.117
17	0.758	70	0.202
18	0.271	76	0.192
25	0.319	85	0.000
29	1.212	95	0.002
48	0.017	105	0.083

Notes:

1.) Measurements represent the difference in grade beam/decking elevation (i.e. Δ-Delta) taken between waterside boardwalk edge & landside boardwalk edge within the same bent.

2.) Refer to Attachment B for complete summary of deck grade differential settlement and variation.

15 Creek Road | Marion, Massachusetts 02738
t: 508.748.0937 | 800.668.3220 | f: 508.748.1363

The Grade Beam Supported Timber Boardwalk settlement was documented in two directions. It was presumed that individual grade beams were originally set level. Based on this assumption, grade beam settlement along the length of the grade beam, from end to end, was documented to determine the current horizontal slope of the grade beams. Additionally, it was presumed that adjacent grade beams were also set at the same elevation, resulting in a flat walking surface. Settlement in this direction was measured as the difference in the top deck surface between adjacent grade beam bents, or the vertical slope along the length of the boardwalk. Measurements taken to document this settlement in both directions can be found on site inspection plans provided in Attachment A. Foth-CLE assigned the following condition ratings based on settlement documented during the inspection. Settlement in the range of, 0 to 1-inch was assigned a "Minor" condition rating, settlement in the range of 1 to 3-inches was assigned a "Moderate" condition rating, settlement in the range of 3 to 6-inches was assigned a "Major" condition rating and settlement in the range of 6-inches or greater was assigned a "Severe" condition rating.

Structural Assessment:

The topside visual conditions along the Grade Beam Supported Timber Boardwalk were observed to be in ***"Poor"*** condition. Primary areas of significant deterioration include the decking and handrail. Additionally, Foth-CLE noted significant differential grade beam settlement.

Recommendations:

Foth-CLE recommends alternatives be developed to provide options for full boardwalk replacement or retrofit to address settlement. These alternatives will incorporate ADA/AAB codes compliance and aesthetics.

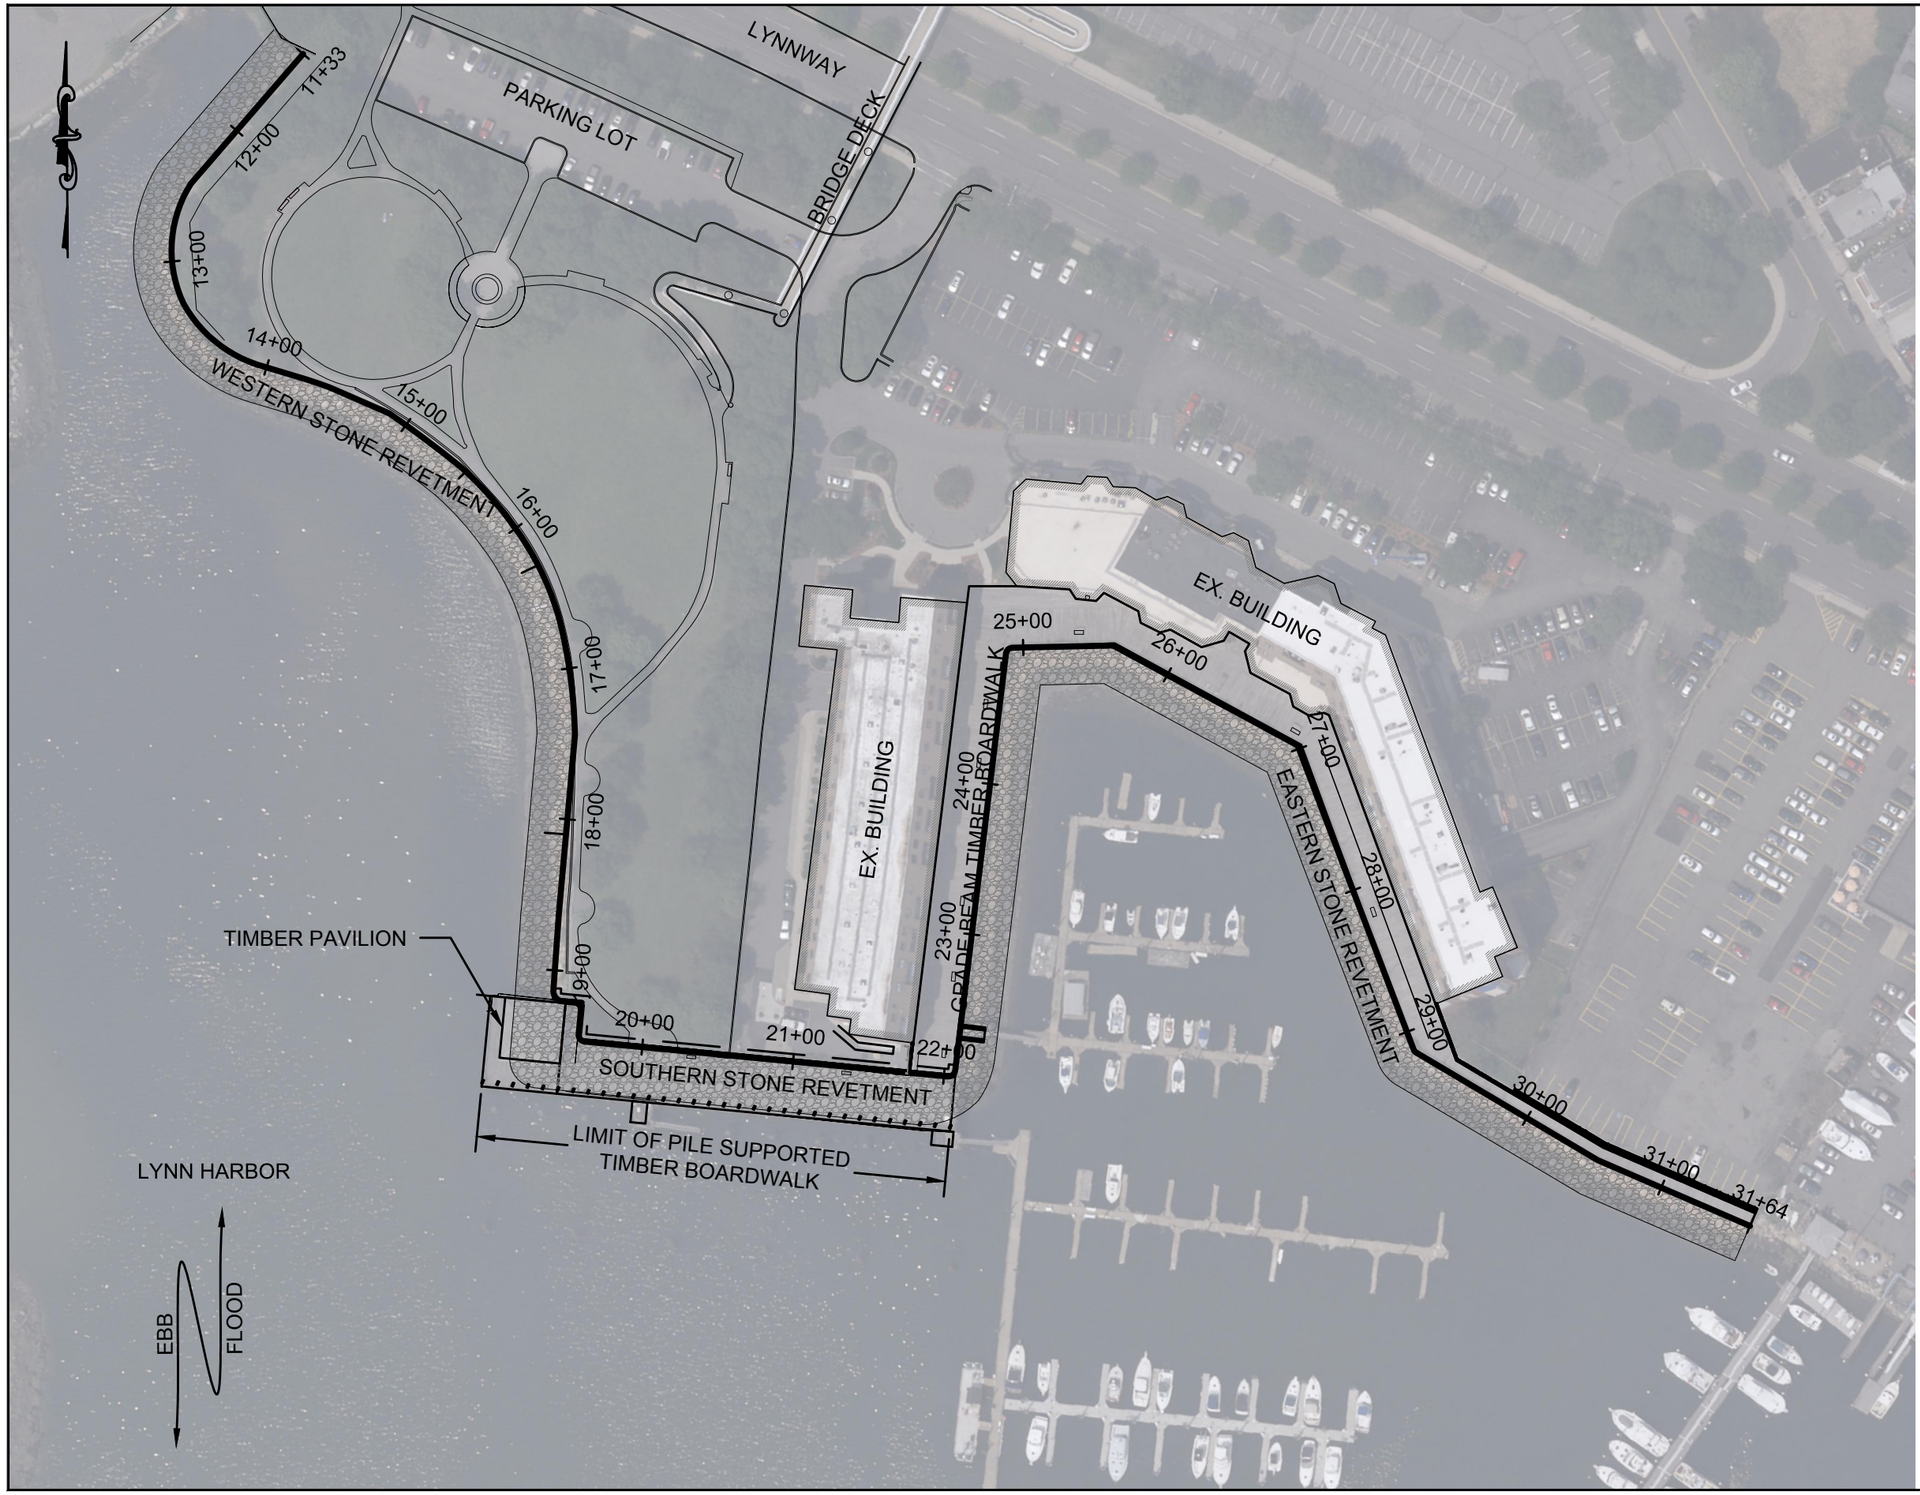
WATERFRONT INFRASTRUCTURE INSPECTION PLAN
DATED 10/19/2018
PREPARED BY FOTH-CLE



GENERAL NOTES:

1. SITE INSPECTION PERFORMED BY FOTH-CLE ENGINEERING GROUP ON 08/09/2018 & 10/17/2018. DIVE INSPECTION FOR PILE SUPPORTED TIMBER BOARDWALK PERFORMED WITH FATHOM DIVING ON 10/04/2018.
2. ALL MEASUREMENTS DEPICTED ON THE DRAWINGS CAN ONLY BE CONSIDERED FOR INSPECTION PURPOSES AND NOT USED FOR CONSTRUCTION. FOTH-CLE DOES NOT WARRANT THE ACCURACY OF SAID PHYSICAL FEATURES.
3. NO SURVEYS WERE CONDUCTED TO LOCATE PROPERTY LINES, CHANNEL LIMITS, EASEMENTS, UTILITIES, GEOTECHNICAL FEATURES, OR ANY OTHER PHYSICAL FEATURES RELATING TO THE PROJECT SITE, NOR DOES FOTH-CLE WARRANT THE EXISTENCE OR LOCATION OF SAID PHYSICAL FEATURES.
4. EXISTING FEATURES & STRUCTURES OBTAINED FROM EXISTING PLANS BY COMMONWEALTH OF MASSACHUSETTS METROPOLITAN DISTRICT COMMISSION PARKS DIVISION ENTITLED "PROPOSED FISHING PIER NEAR GENERAL EDWARDS BRIDGE, LYNN" DATED MAY 1973 AND FROM SURVEY CONDUCTED BY STANTEC & SURVEY AND MAPPING CONSULTANTS.
5. POSSESSION AND USE OF THE MATERIAL CONTAINED ON THESE DRAWINGS IS GRANTED ONLY IN CONNECTION WITH ITS USE AS IT RELATES TO THE TITLED PROJECT, ANY OTHER USE, REPRODUCTION OR DISCLOSURE OF THE INFORMATION CONTAINED HEREON IS EXPRESSLY PROHIBITED WITHOUT THE WRITTEN CONSENT OF FOTH-CLE ENGINEERING GROUP.

Condition Rating Notes:

Yellow — Indicates Minor Condition Rating. Deck Grade Variation between 0-inches to 1-inch.
Green — Indicates Moderate Condition Rating. Deck Grade Variation between 1-inch to 3-inches.
Blue — Indicates Major Condition Rating. Deck Grade Variation between 3-inches to 6-inches.
Red — Indicates Severe Condition Rating. Deck Grade Variation Greater than 6-inches.

APPENDIX G

Stantec Consulting Services Inc.
400 Crown Colony Drive Suite 200, Quincy MA 02169-0982

Memorandum

To: **Jennifer Ducey**

From: Joseph Salvetti and Andrew Martzolf

Date: November 2, 2018

RE: **Preliminary Review of Environmental Data**
Lynn Heritage State Park
Project # 179410750

Stantec Consulting Services, Inc. (Stantec) has performed this preliminary review of environmental data for the development of the Lynn Heritage State Park (the Site). The location of the Site is depicted on the attached Figure 1 Site Locus Map. This environmental data review was performed to determine if any reported release locations of oil and/or hazardous materials (OHM) present a potential to impact soil or groundwater at the Site. The identification of potential areas of impacts at the Site will aid in the determination of any special handling or management of impacted media which may be necessary during future construction activities at the Site. The City of Lynn anticipates the redevelopment of the Lynn State Heritage Park which includes installation of a paved parking lot with a subsurface drainage system, shade structures and lamp posts along the asphalt path, and a concrete pad in the middle of the park.

The Site is approximately 800 feet long from north to south and varies in width along the east-west axis from approximately 400 feet to 150 feet. The Site includes approximately 1,250 feet of boardwalk along the eastern coast. The Site is currently utilized as a public park including a paved parking lot, lawns, wooden boardwalk, and asphalt paths.

Stantec personnel performed a visual inspection of the Site on foot on August 23rd, 2018. Photographs are included as Attachment 1. The Site walk focused on the observation of current conditions and observable indications of past uses and conditions that may indicate the presence of a release of OHM that could impact proposed construction activities. Stantec was also inspecting to determine if a release of OHM existed which warranted potential notification to the Massachusetts Department of Environmental Protection (MADEP) in accordance with CMR 40.0000 of the Massachusetts Contingency Plan (MCP). Stantec observed no current conditions which indicate a reportable release at the Site has occurred.

The property consists of a park covered with grass and paved paths. There is a paved parking lot at the north end of the property and a boardwalk with a gazebo and docks to the south. The property is surrounded by the ocean to the west and south. Connected to the boardwalk adjacent to the gazebo is a dock used by recreational boaters to moor their boats. Stantec observed fuel lines running along the bottom of the dock out to a fuel pump located on the dock. A vent and fill pipe were observed on the landward side of the boardwalk near the gazebo and an underground storage tank (UST) suspected to be connected to the fuel lines is located beneath the asphalt road located between the park and the office/apartment building to the east. To the east of the park portion of the property, and surrounded by the boardwalk, is a five-story building that contains a mix of commercial businesses and residential apartments. East of that are more apartments and a restaurant. To the north of the property is the Lynnway and north of that is the campus for North Shore Community College. A large concrete

and metal walkway span the Lynnway connecting the North Shore Community College campus and the property.

ENVIRONMENTAL DATABASE REVIEW

Stantec reviewed a regulatory agency database search report obtained from Environmental Data Resources, Inc., a third-party environmental database search firm. A complete copy of the database search report is included as Attachment 2. Stantec evaluated the information listed within the database relative to any potential impact to the Site, assessing the potential for impacts based in part on the physical setting. Stantec reviewed additional information on release locations through MADEP's Waste Site/Reportable Releases online lookup. As part of this process, inferences have been made regarding the likely groundwater flow direction at or near the Site. Groundwater flow direction is inferred to be southerly towards the harbor.

Based on historical topographic maps and Sanborn maps, Stantec observed that approximately 70% of the Site was originally part of the harbor that has been filled. Reports indicate the fill includes harbor dredging's, soil, and debris from the great Lynn fire of 1889 (NSCC-McGee Building Additions Phase II CSA and PSS, 2017. See Attachment 3). Prior borings conducted at the Site indicate sequences of urban fill and dredge materials approximately 20 feet in depth.

The Site was identified as a release site in the environmental database report. On July 2nd, 2017 MADEP received a report that emulsified oil and sheen was floating on the surface of Broad Sound, scattered throughout the harbor adjacent to the Site. It is unknown where the oil came from. The oil was contained with booms, cleaned up and the release was assigned NRC report # 1183169. This release was not identified on the land section of the Site so is likely to have limited impact to subsurface soils and/or groundwater. However, emulsified oil may have migrated through the rock rip rap border along the harbor resulting in residual impacts.

The following releases are located within close proximity to the Site are summarized below and depicted on Figure 2 Reportable Release Sites.

Address:	Distance/Direction from Site:	RTN(s)	Nature of Release	Regulatory Status
282R Lynnway Vacant Parcel	**1000 feet east**	**3-0026703**	**Contaminated fill and potential offsite contamination migration**	**B-2 RAO**
325-327 Broad Street Vacant Parcel	**800 feet northeast**	**3-0029333**	**Petroleum release to soil**	**A2 RAO**
44 Suffolk Street Former Commercial Warehouse	**500 feet north-northeast**	**3-0030376**	**No. 2 heating oil released into basement and soil`**	**A-2 RAO**
205 Market Street Goodyear Auto Service	**1000 feet northeast**	**3-0004515**	**Petroleum to soil**	**A-2 RAO**
300 Broad Street North Shore	**400 feet north**	**3-0032907**	**Petroleum to soil**	**Permanent solution**

Community College				
254 Lynnway Former Beacon Chevrolet	**500 feet west**	**3-0015391**	**Hydrocarbons to soil**	**Permanent solution with AUL**

Following a review of the environmental database report, it is Stantec's opinion that the listings in the environmental database report would not pose significant impact to the subject Site due to one or more of the following reasons; the location or distance from the Site, the regulatory status of the release or nature of contaminants released. However, because several of these listings are potentially upgradient of the Site, residual impacts from these sites may have migrated with groundwater to the Site. If groundwater dewatering/management is required, appropriate testing should be performed to evaluate necessary management options.

SUBSURFACE INVESTIGATION

Between September 18, 2018 and October 12, 2018 New England Boring advanced 21 soil borings using an Acker Soil Scout Rig. Continuous soil samples were collected from grade to the termination of the boring, which varied in depth from 31 feet below surface grade to 61 feet below surface grade. Soils were described as medium to fine sands underlain by silty clay. Within these soils are trace amounts of brick, wood with creosote odor, charred wood, glass, wood ash, and coal. Soil boring logs are provided as attachment 4.

Based upon the boring locations and anticipated locations of soil disturbance during construction activities soil samples were collected. Samples from HP-14a, HP-16a, HP-18a, and HP-26a were selected and submitted to Phoenix Environmental Laboratory for volatile organic compounds (VOCs) and volatile petroleum hydrocarbons (VPH). Composite samples from HP-18a, HP-14a/HP-13a, HP-26a/HP-27a, and HP-15a/HP-16a/HP-17a were selected and submitted to Phoenix Environmental Laboratories for ignitability, extrable petroleum hydrocarbons (EPH), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, herbicides, MCP 14-metals, total petroleum hydrocarbons, ph, reactivity, and conductivity.

The analytical results indicate that in the HP-14A sample there were concentrations of naphthalene, acetone, carbon disulfide, p-isopropyltoluene, sec-butylbenzene, and toluene above laboratory detectable limits. In the HP-26a sample there were concentrations of C9-C12 Aliphatic hydrocarbons, naphthalene, 1,2,4 trimethylbenzene, 1,3,5 trimethylbenzene, carbon disulfide, ethylbenzene, isopopylbenzene, n-butylbenzene, n-propylbenzene, p-isopropyltoluene, and sec-butylbenzene above laboratory detectable limits. In the HP-16A sample there were detections of carbon disulfide above laboratory detectable limits. All the detected concentrations above are below the most stringent RCS-1 reportable concentrations (see table 1).

The analytical results indicate that concentrations of metals, pesticides, polychlorinated biphenyls, and volatile organic compound groups had analytes in all the composite samples above laboratory detectable concentrations, however all the detected analytes were below the most stringent Mass DEP RCS-1 standard. Details on the specific compounds and their concentrations can be found in Table 1. Concentrations of polycyclic aromatic hydrocarbons and semi-volatile organic hydrocarbons had analytes that exceeded RCS-1 reportable concentrations which include: phenanthrene, benz(a)anthracene, benzo(a)pyrene, benzo(a)fluoranthene, dibenz(a,h)anthracene, dibenzofuran in samples HP-18a, HP-14a/HP-13a, and HP-15a/HP-16a/HP-17a. additionally HP-15a/HP-16a/HP-17a

had concentrations of 2-methynaphthalene, acenaphthene, naphthalene, acenaphthylene, and indeno (1,2,3-cd) pyrene above RCS-1 reportable concentrations.

Although concentrations of polycyclic aromatic hydrocarbon and semi-volvatile organic compound analytes exceeded the applicable reportable concentrations, the site is exempt from reporting these exceedances due to the presence of historical fill as defined by the Historical Fill/ Anthropogenic Background draft technical update. As stated in the environmental database review section, Stantec observed approximately 70% of the site was built up with fill based on historical topographic and Sanborn maps. Prior reports indicate components of the fill used were from the Great Lynn Fire of 1889. The presence of fill was confirmed by the brick, glass, coal, wood ash, and burnt wood observed during the subsurface investigation.

CONCLUSIONS AND RECOMMENDATIONS

The Site is listed in the environmental database report due to reports of emulsified oil present on the water on Broad Sound. Although MADEP did not require any further action, the potential exists that emulsified oils may have accumulated on soils present behind the rip rap. If oily soils are encountered behind the rip rap, appropriate management of these materials will be required as referenced below.

As referenced above, approximately 70% of the Site was historically part of the harbor that was filled. with harbor dredging's, soil, and debris from the great Lynn fire of 1889. Areas of the Site with observed coal and coal ash are exempt from MADEP notification but will require appropriate soil handling and management as referenced below. In accordance with the MCP, detected compounds above applicable MCP RCS-1 Reportable Concentrations which are attributable to the presence of coal/coal ash at the Site are exempt from reporting requirements to the MADEP.

Because of the potential for on Site and off-site residual impacts, soils or groundwater associated with the proposed construction will require a Soil/Groundwater Management Plan and implementation of a Health and Safety Plan. Soils generated for off-Site disposal during construction activities will need to be characterized and properly disposed off-Site. Soil data is available, which can be utilized to evaluate disposal facility options and estimated disposal costs.

EXECUTIVE SUMMARY

Weston & Sampson Engineers, Inc. (Weston & Sampson) has prepared this Phase II Comprehensive Site Assessment (CSA) Report and Permanent Solution Statement (PSS) for Release Tracking Number (RTN) 3-32907. This RTN is associated with the presence of petroleum hydrocarbons in soil and groundwater at the North Shore Community College Lynn Campus (the Site). This Phase II CSA Report and PSS has been prepared in accordance with the Massachusetts Contingency Plan (MCP), 310 CMR 40.0835 and 40.1056 for Massachusetts Division of Capital Asset Management and Maintenance (DCAMM), on behalf of the Commonwealth of Massachusetts, the owner of the Site.

The Site is located at the North Shore Community College campus at 300 Broad Street in Lynn, Massachusetts (Figure 1). The Site consists of the McGee Building and its addition, which serves various functions for operation of the college. Downtown Lynn business and residential developments exist within a 1 mile radius (Figures 2 and 3).

In January 2015, soil impacted by petroleum hydrocarbons was discovered during the excavation of test pits prior to construction of the addition to the McGee Building. In March 2015, nine soil borings were advanced to assess the lateral extent of impacts near TP-7 and in June 2015, a Release Abatement Measure (RAM) was implemented for excavation and disposal of approximately 150 cubic yards of petroleum impacted historic fill. Following completion of RAM activities, a Phase I Initial Site Investigation was conducted, which included soil sampling and the installation and monitoring of four groundwater monitoring wells (MW-1 through MW-4). Exceedances of the Method 1 GW-2 cleanup standard for C9-C18 aliphatic extractable petroleum hydrocarbons (EPH) and the Method 1 GW-3 cleanup standard for C11-C22 aromatic EPH were detected at one location (MW-3). These monitoring wells were appropriately abandoned during construction of the McGee Building addition.

As part of the Phase II CSA, six soil borings (each completed as a groundwater monitoring well) were advanced in December 2016 to evaluate the spatial extent and seasonal effects of petroleum impacts on groundwater and to assess the vapor intrusion pathway with respect to the original McGee Building and the new addition. Monitoring well MW-103 was installed to replace well MW-3, where exceedances were detected in 2015. One soil exceedance of Method 1 S-1 cleanup standards (C11 to C22 aromatic fractions) was identified at one location (MW-105, below 10 ft bgs). No groundwater exceedances were identified.

Extractable petroleum hydrocarbons (EPH) are the Site COCs. The primary source of EPH (approximately 150 cubic yards of localized historic fill) was removed from the Site during the Site RAM in 2015. Fill material is found throughout the Site to a maximum depth of approximately 15 ft bgs. Groundwater is a potential migration pathway, however analysis of groundwater samples in January 2017 did not identify concentrations of EPH above GW-2 or GW-3 standards. Based on the absence of groundwater impacts in 2017, the potential impact to indoor air at the Site buildings is not considered a potential migration pathway.

Weston & Sampson performed a Method 1 Risk Characterization to establish whether a level of No Significant Risk (NSR) for human health exists or can be achieved at the Site. The Method 1 Risk Characterization considered both current and reasonably foreseeable future Site activities and uses. Soil was conservatively categorized as S-1 and groundwater was classified as GW-2 and GW-3.

Based on the results of the risk assessment, the Site was found to pose no unacceptable human health risks or risk to the environment, public welfare, or safety and the Site meets a level of NSR.

1.0 INTRODUCTION

1.1 General

Weston & Sampson has prepared this Phase II Comprehensive Site Assessment (CSA) Report and Permanent Solution Statement (PSS) for Release Tracking Number (RTN) 3-32907 on behalf of the Massachusetts Division of Capital Asset Management and Maintenance (DCAMM) at the North Shore Community College (NSCC) campus in Lynn, Massachusetts (the Site).

RTN 3-32907 is associated with the detection of petroleum hydrocarbons in soil and groundwater above the applicable Massachusetts Department of Environmental Protection (MassDEP) Method 1 cleanup standards. This Phase II CSA Report and PSS has been prepared in accordance with the Massachusetts Contingency Plan (MCP) 310 CMR 40.0835 and 40.1056. The applicable Bureau of Waste Site Cleanup (BWSC) forms have been submitted electronically and copies of public notification letters and legal notice are provided in **Appendix A**.

1.2 Objective and Phase II Scope of Work

This Phase II CSA Report and PSS includes data necessary to support opinions regarding the source, nature, extent, and fate of potential contaminant releases; the risk of harm posed by the disposal site to health, safety, public welfare, and the environment; and the need to conduct remedial actions. In addition, the Phase II CSA Report and PSS describes Response Actions completed to date, documents the nature and extent of contamination and includes a Method 1 Risk Characterization. The following required information for a Phase II CSA Report and PSS are provided below:

- Disposal Site Name, Location, and Locus Map
- Detailed Disposal Site Map
- Disposal Site History
- Site Hydrologic and Hydrogeologic Characteristics
- Environmental Fate and Transport of Oil and/or Hazardous Material
- Nature and Extent of Contamination
- Exposure Assessment
- Risk Characterization
- Representativeness Evaluation and Data Usability Assessment (REDUA)
- Conclusions

2.0 GENERAL DISPOSAL SITE INFORMATION

2.1 Site Location and Description

The Site is a 10.85-acre parcel located within the NSCC's Lynn Campus at 300 Broad Street in Lynn, Massachusetts. The building on the Site is the McGee building which is used for classrooms and administrative offices for the college. A new addition to the McGee Building was completed in 2016. The remainder of the parcel consists of grass, landscaped areas, paved walkways, and paved parking areas.

The approximate geographical coordinates for the Site are as follows:

UTM Coordinates:	N 4,702,827 m E 340,105 m
Latitude/Longitude:	42°27'40.6" N 70°56'41.1" W

See **Figure 1 – Locus Map** and **Figure 2 – Site Plan** for a depiction of the Site and vicinity.

2.2 Land Use of Surrounding Area

The Site is located south of Broad Street in the southeast portion of the City of Lynn; Route 1A forms the southern Site boundary. The abutting properties to the Site include the following:

- Residential properties and the Central Square-Lynn train station to the north;
- Residential properties and small businesses to the east;
- The Lynnway (Route 1A) and the Seaport Landing Marina to the south; and
- Market Street and Carroll Parkway Park to the west.

No schools or institutions, as defined in the MCP, were identified onsite or within 500 feet of the Site.

2.3 Natural Resources Areas

Review of Massachusetts Geographic Information Systems (MassGIS) data shown in **Figure 3 - Area Receptors Map**, provides the following information regarding environmental receptors:

- The Site is not located within a medium or high yield aquifer, interim wellhead protection area (IWPA), or MassDEP approved Zone II.
- The Site is not located within an Area of Critical Environmental Concern (ACEC).
- There are no Habitats of Species of Special Concern or Threatened or Endangered Species located within 500 feet of the Site.
- There are no wetlands or surface water bodies at the Site. The closest water body to the Site is Lynn Harbor, located approximately 500 feet to the southwest and Nahant Bay, located approximately 1,500 feet to the southeast.
- There are three areas designated as Protected Open Space within 500 feet of the Site, located to the south and west.

Additionally, there are no private drinking water wells listed within 500 feet of the Site according to the MassDEP's online SearchWell program.

2.4 MCP Soil and Groundwater Classification

The applicable MCP soil and groundwater classifications for the Site are identified below and were based on the criteria in the MCP at 310 CMR 40.0933 for soil, and 310 CMR 40.0932 for groundwater.

2.4.1 Soil

Three soil categories for use in risk characterization have been developed by MassDEP based on current and future exposure potential. Soils are classified as Category S-1, S-2, or S-3. Category S-1 applies to soil with the greatest exposure potential while Category S-3 applies to soil with the lowest exposure potential. Categorization is dependent upon the frequency and intensity of Site use by both children and adults, and the accessibility of the Site soil.

The following human exposure potential and receptor characteristics were evaluated to assess the appropriate soil category for the Site. The Site is not secure; therefore, access is unrestricted. Site soil is considered accessible in the landscaped (i.e., unpaved) areas of the Site. Frequency of use by adults is considered high; however frequency by children is considered low. Intensity of use is considered low by both adults and children; activities conducted at the Site are not expected to disturb soil and result in direct contact with the soil or inhalation of soil derived dust. Based on these characteristics of the Site, the current applicable soil category is S-2 for soils located 0 to 3 feet below ground surface (bgs) in unpaved areas, S-3 for soils located 0 to 3 feet bgs in paved areas, and S-3 for soils located greater than 3 feet bgs throughout the Site.

While categories S-2 and S-3 are appropriate for the Site, category S-1 cleanup standards (considered to be protective of the most sensitive receptors including residential use of the property) were used for possible future use as a conservative measure. If Site soil meets Method 1 S-1 cleanup standards, it may be concluded that a condition of no significant risk (NSR) exists for unrestricted use, and no further risk characterization or remedial response actions are required.

2.4.2 Groundwater

The groundwater categories for the Site were developed pursuant to the MCP, 310 CMR 40.0932. Based on potential exposures, the DEP has defined three categories of groundwater for risk characterization as follows:

- Groundwater category GW-1 applies to groundwater located within current or potential drinking water sources areas;
- Groundwater category GW-2 includes groundwater where the average annual depth to the water table is less than 15 feet bgs and where groundwater is located within 30 feet of an existing or planned building or structure that is or will be occupied; and
- Groundwater category GW-3 applies to all groundwater in Massachusetts due to its potential to discharge to surface water bodies.

As presented in Figure 3 - Area Receptors Map, the Site is not located within a current or potential drinking water source area as defined in the MCP (310 CMR 40.0006), a MassDEP-approved Zone II Area, a Water Supply Protection Area (WPA), or within 500 feet of a public or private drinking water well. As such, groundwater category GW-1 does not apply to the Site. Depth to groundwater at the Site is less than 15 feet bgs (i.e., generally ranges from approximately 5 to 10 feet bgs) and is located within 30 feet of an occupied building (i.e., McGee Building and addition); thus, the applicable groundwater categories for the Site are GW-2 and GW-3.

3.0 DISPOSAL SITE HISTORY, DISCOVERY, ABATEMENT, & INVESTIGATION

3.1 Site History

Information available from previous reports, historical mapping, and aerial photographs suggests that the Site was formerly a marsh within Lynn Harbor. Between 1829 and the mid-1900's the Site was filled with soil, harbor dredging material, and rubble from the "Great Lynn Fire of 1889." Historical uses of the Site include commercial businesses such as shoe factories, a steam laundry, a woodworking shop, a transformer manufacturer, a power house, and a lumber yard. A former firehouse and petroleum service station were also reportedly once located in the vicinity. Most, or all, of these businesses were destroyed in the "Great Lynn Fire of 1981" and subsequently the Site was re-graded and redeveloped as the NSCC Lynn Campus.

3.2 Release Discovery & Abatement

3.2.1 Release Discovery

On January 14 and 15, 2015, EBI Consulting of Burlington, Massachusetts oversaw the excavation of eight test pits at the Site (TP-1 through TP-8) to gather subsurface information in support of a campus expansion and renovation project. Test pit locations are shown on Figure 4. Historic fill material was identified throughout the Site and hydrocarbon odors were present in one test pit (TP-7). One soil sample from each test pit was submitted for laboratory analysis of Extractable Petroleum Hydrocarbons (EPH), Volatile Petroleum Hydrocarbons (VPH), Total Petroleum Hydrocarbons (TPH), metals (arsenic, cadmium, chromium, chromium +6, mercury, and lead), and polychlorinated biphenyls (PCBs). Analytical results indicated exceedances of Reportable Concentrations for petroleum hydrocarbons, polycyclic aromatic hydrocarbons (PAHs) and metals (lead). Analytical results for the EBI investigation are provided in Table 1. Exceedances of the Reportable Concentrations for EPH and VPH occurred only at test pit TP-7. Lead and PAH concentrations at the Site were attributed to the presence of historic fill material throughout the subsurface as the result of two separate filling episodes, one after the Great Lynn Fire of 1889 and one after the Great Lynn Fire of 1981. Lead and PAH concentrations were also generally within background concentrations for anthropogenic fill, as shown in Table 2.

Based on the limited exceedances for EPH and VPH at TP-7, DCAMM requested O'Reilly, Talbot & Okun (OTO) to implement a one-day Geoprobe® exploration program to evaluate the extent of petroleum-impacted soil in the vicinity of TP-7.

On March 20, 2015, OTO advanced nine soil borings in the vicinity of TP-7 (SB-1 through SB-9). Soil boring locations are shown on Figure 4. Soil borings were advanced to depths between 12 and 16 feet bgs. Up to eight feet of historic fill material was observed, and consisted of silt, sand and gravel with brick, concrete, glass, metal debris, ash, and trace asphalt. Soil was field screened for visual and olfactory indications of contamination (e.g. odor, sheen, or staining) as well as for total volatile organic compounds (TVOCs) using a photoionization detector (PID) and the jar headspace soil screening method. Field screening identified TVOCs in soil samples ranging from less than 0.1 ppmv to 790 ppmv (at boring SB-3). Elevated PID readings (above 3 ppmv) were noted at borings SB-1 through SB-4.

One soil sample was collected from each boring at 10-12 feet bgs, and one additional sample was collected at boring SB-1 at 12-14 feet bgs. Soil samples were submitted to Con-Test Analytical

Laboratory (Con-Test) in East Longmeadow, Massachusetts for analysis of Total Petroleum Hydrocarbons (TPH). Analytical results indicated an exceedance of S-1 soil standards at boring SB-1 (which is in close proximity to TP-7), but at no other locations. Analytical results for the OTO investigation are provided in **Table 3**.

3.2.2 Release Notification

On May 20, 2015, OTO, on behalf of DCAMM, notified MassDEP of the "120-day" notification condition associated with the petroleum impacted soil in TP-7. A Limited Removal Action (LRA) was initiated on-site on May 20, 2015 because it was anticipated that the volume of soil to be excavated would be less than 100 yards. However, as excavation progressed, the contractor advised that the total volume would likely exceed 100 yards. The 120-day release notification was submitted to MassDEP and the LRA was converted to a Release Abatement Measure (RAM) Plan, as described below.

3.2.3 Release Abatement Measure

A Release Abatement Measure (RAM) Plan was submitted on May 26, 2015 describing the planned soil excavation/disposal activities. In June 2015, RAM activities were implemented at the Site by Triumvirate Environmental for the proper excavation, management, transportation, and disposal of approximately 150 cubic yards of petroleum impacted historic fill in the vicinity of TP-7. This excavation included former boring locations SB-1 through SB-4, as well as SB-8 and SB-9.

Following excavation, confirmatory sampling was conducted for laboratory analysis at the limits of the excavation. Analytical results indicated that these samples contained concentrations less than S-1 cleanup standards, with the exception of benzo(a)pyrene (related to historic ash fill). Analytical results were provided in Table 2 in Appendix F in the Phase I ISI submitted to MassDEP in May 2016.

Test pit logs, soil boring logs, monitoring well logs, and associated analytical laboratory reports were provided in the Phase I ISI submitted to MassDEP in May 2016.

3.3 Previous Investigations

3.3.1 Soil Stockpiling, Characterization, and Disposal

Petroleum impacted soil excavated from the vicinity of TP-7 was stockpiled on 60-millimeter (mil) high density polyethylene (HDPE) liner and covered with 10 mil polyethylene liner at the end of each work day. Approximately 150 cubic yards of petroleum-impacted soil was excavated and stockpiled on site.

On May 20, 2015, Triumvirate collected a representative composite sample from the stockpiled impacted soil and submitted the sample to Alpha Analytical laboratory in Westborough, Massachusetts for analysis of: RCRA 8 metals (arsenic, barium, cadmium, chromium, lead, mercury, selenium and silver) and Toxicity Characteristic Leaching Procedure (TCLP) RCRA 8 metals. The disposal characterization results were provided in Appendix G of the Phase I ISI submitted to MassDEP in May 2016.

On June 1, 2015, the impacted soil was transported under a Bill-of-Lading to Aggregate Recycling Corporation in Elliot, Maine. Disposal documentation was included in Appendix F of the Phase I ISI submitted to MassDEP in May 2016.

3.3.2 Post-RAM Subsurface Investigations

On August 4, 2015, OTO observed the installation of four groundwater monitoring wells in the immediate vicinity of the RAM excavation, as shown on Figure 4.

On August 17, 2015, OTO conducted one groundwater monitoring event. Groundwater samples were analyzed for EPH and VPH with target analytes. One sample, at monitoring well MW-3 had exceedances of the GW-2 cleanup standard for C9-C18 aliphatic EPH and exceedances of the GW-3 cleanup standard for C11-C22 aromatic EPH. No exceedances were reported at the remaining wells. All four monitoring wells were removed during construction of the McGee Building addition.

3.4 Current Phase II Investigation

In December 2016, Phase II activities were completed at the Site to evaluate the extent and seasonal (i.e., temporal) effects of petroleum impacts on groundwater and to assess the potential vapor intrusion pathway with respect to the original McGee Building and the nearly completed addition. While a vapor barrier was installed beneath the new McGee building addition, no vapor barrier is present under the original McGee building. Phase II activities included the completion of six soil borings (each completed as a groundwater monitoring well), soil sampling, and one round of groundwater monitoring.

3.4.1 Soil Boring/Monitoring Well Installation

On December 22 and 23, 2016, six soil borings were completed at the Site with Geoprobe® direct-push drilling techniques to between 15 and 17 feet bgs. Boring locations are shown on Figure 4. Soil boring logs are included in Appendix B. Soil was field screened for visual and olfactory indications of contamination (e.g. odor, sheen, or staining) as well as for total volatile organic compounds (TVOCs) using a PID and the jar headspace soil screening method. One soil sample was collected from each boring at the depth with the highest PID reading and a second sample was collected at each boring at the water table interface. Soil samples were submitted under standard chain-of-custody procedures to Con-Test Analytical Laboratory in East Longmeadow, Massachusetts for analysis of EPH with MassDEP Method MADEP-EPH-04.

Each of the six soil borings was completed with a groundwater monitoring well (wells MW-101 through MW-106), screened across the groundwater interface, with bottom depths ranging from 15 to 17 feet bgs. Monitoring well locations are shown on Figure 4. Monitoring well completion logs are included in Appendix C. Wells were constructed in general accordance with the MassDEP Standard References for Monitoring Wells, WSC-310-91. Wells were constructed with Schedule 40 PVC, with a ten-foot section of 0.010" slotted well screen. Filter sand was placed in the annular space around the well screen to approximately two feet above the top of the well screen. At least one foot of bentonite slurry was placed above the filter sand to seal the well. Well cuttings were used to backfill the remaining annular space to within approximately one foot bgs. A standard monitoring well roadbox, secured in concrete, was installed to protect the wells. Each of the new wells was developed by purging at least three well volumes, which was discharged to the ground surface.

3.4.2 Groundwater Monitoring

On January 6, 2017, Weston & Sampson personnel conducted one round of groundwater monitoring. Groundwater samples were collected from monitoring wells MW-101 through MW-106 using standard low-flow procedures. Groundwater sample collection forms are included in Appendix D. Groundwater samples were submitted under standard chain-of-custody procedures to Con-Test Analytical

Laboratory in East Longmeadow, Massachusetts for analysis of EPH with MassDEP Method MADEP-EPH-04.

3.4.3 Soil Gas Monitoring

Based upon the results of the groundwater monitoring (analytical results are presented in Section 5.3), soil gas monitoring was determined to be unnecessary and was not performed as part of this scope of work.

4.0 SITE HYDROGEOLOGIC CHARACTERIZATION

4.1 Surficial and Bedrock Geology

In general, the following geologic units were encountered during the subsurface exploration programs in vertical stratigraphic succession:

Topsoil: Dark brown silts to fine to medium sands, ranging in thickness from 1 inch to 2 feet.

Historic Fill: Brown, fine to medium sands, with trace amounts of silt; some gravel, ranging in thickness from 8.5 to 15 feet. Fill contains varying amount of brick, concrete, glass, metals, ash and trace asphalt

Silts and Sands: Brown-gray to black, sandy silt, containing trace amounts of gravel, and black, fine to coarse sand with clay, and silty sands with gravel ranging from 2 to 17 feet bgs.

Peat: A peat layer, approximately 2 feet thick, was encountered at locations SB-1 through SB-9 between the brown-gray to black silts/sands and the gray to gray/blue silts and clays

Silt and Clay: Gray silt and clay and gray/blue clay, up 7 feet thick at one location (MW-101)

According to the Bedrock Geologic Map of Massachusetts prepared by the Department of Public Works Published by E-an Zen in 1983, the Site is underlain by the Lynn Volcanic Complex (Lower Devonian, Silurian, or Proterozoic), which includes rhyolite, agglomerate, and volcanic tuff. Bedrock was not encountered during soil boring activities.

4.2 Hydrogeology

4.2.1 General

Depth to groundwater measurements collected during the January 2017 groundwater monitoring event (between 5 and 10 feet bgs) were converted to groundwater elevations and are shown on **Figure 5**. Groundwater measurements are provided in **Table 4**. Groundwater flow is to the south/southwest in the southern portion of the Site and to the north in the northern portion of the Site.

The horizontal hydraulic gradient in the overburden towards the southwest ranges from approximately 0.02 to 0.03 feet per foot (ft/ft). This horizontal gradient is similar to that seen in 2015. The horizontal gradient towards the north, in the northern portion of the Site is approximately 0.01 ft/ft. These gradients are considered to be fairly shallow.

The seepage velocity (v_s) is the actual velocity of the water as it travels around individual particles of soil. The seepage velocity (v_s) is used to assess how fast a dissolved contaminant plume may travel. The estimated seepage velocity across the Site is calculated with the following relationship established by Darcy (1856):

$$v_s = \frac{Ki}{n_e}$$

where:

v_s = seepage velocity (ft/day)

i_{avg} = 0.024 ft/feet

$K_{(low)}$ = 0.01 ft/day

$K_{(high)}$ = 1 ft/day

n_e = 0.35 (effective porosity average from Fetter, 1994)

Using the high and low hydraulic conductivity values (1 ft/day and 0.01 ft/day) and the highest calculated hydraulic gradient (0.03 ft/ft) the estimated groundwater velocity across the Site was calculated to range from approximately 0.0009 to 0.09 feet/day, or up to 31 ft/year. This value is less than the 200 feet/year threshold for Substantial Release Migration (SRM) as defined in 310 CMR 40.0413(2).

5.0 NATURE AND EXTENT OF IMPACTS

As detailed in Section 3.0, Weston & Sampson performed additional Site investigation in December 2016 and January 2017 to supplement existing Site data and generate additional information for the overall Phase II CSA and PSS. The following discussion includes data from historical investigations performed at the Site (where appropriate) and summarizes the current nature and extent of contamination at the Site. Soil removed as part of the RAM in 2015 is not included in this discussion.

5.1 Soil Field Screening

Three of the initial nine boring locations were located in areas not removed during excavation activities. Field screening at these locations (SB-5, SB-6, and SB-7) did not identify visual or olfactory evidence of contamination or elevated PID readings (above 0.6 ppmv). During soil boring activities associated with the installation of the six new wells, elevated PID readings were identified at one location, MW-103. PID readings at this location ranged from 0.2 ppmv in the upper five feet, to 75 ppmv between 5 and 10 feet bgs, and 50 ppmv between 10 and 15 feet bgs. No other elevated PID readings (greater than 4 ppmv) were identified. A slight petroleum odor was noted between 10 and 15 ft bgs at MW-105, though PID readings were not elevated.

5.2 Soil Analytical Results

As shown in **Table 3**, analytical results for borings SB-5, SB-6, and SB-7 did not identify TPH concentrations in excess of the S-1 cleanup standard (1,000 mg/kg). Analytical results for the six borings completed in 2016 (MW-101 through MW-106) identified only one exceedance of the S-1 cleanup standards, concentrations of C11-C22 aromatic EPH at MW-105 (between 10 and 15 ft bgs). Soil analytical results for the six borings completed in 2016 are provided in **Table 5**. Laboratory packages are provided in **Appendix E**.

5.3 Groundwater Analytical Results

In August 2015, shortly after the excavation of the source material (petroleum impacted historic fill near TP-7), groundwater at one well location (MW-3) had exceedances of C9-C18 aliphatic and C11-C22 aromatic EPH cleanup standards. Wells MW-1 through MW-4 were removed during construction of the McGee Building addition. In January 2017, EPH concentrations at the six new Site wells (including the replacement well for MW-3, MW-103) were either non-detect, or were below the GW-2 and GW-3 standards. Groundwater analytical results are provided in **Table 6**. Laboratory packages are provided in **Appendix E**.

5.4 Nature and Extent of Oil and/or Hazardous Materials Summary

5.4.1 Soil

One soil exceedance has been identified remaining at the Site, an exceedance of the S-1 standard for C11-C22 aromatic EPH at location MW-105 (10 ft bgs). Soil contamination near the former test pit TP-7 was removed as part of the RAM in 2015.

5.4.2 Identification of Background Conditions

Background conditions, defined in the MCP (310 CMR 40.0006), are those levels of oil and hazardous material that would exist in the absence of the disposal site of concern, including both Natural Background and Anthropogenic Background.

As assessed from previous reports, historical mapping, and aerial photographs, the Site was formerly a marsh within Lynn Harbor. Between 1829 and the mid-1900's the Site was filled with soil, harbor dredging material, and rubble from the "Great Lynn Fire of 1889." A second fire, the "Great Fire of 1981" also completely destroyed all buildings that were on the property in 1981. During Site exploration and RAM activities evidence of anthropogenic fill including brick, concrete, glass, metal debris, ash, asphalt, etc.) was observed in soil across the subsurface of Site to depths of 15 feet. Therefore, the PAHs and lead that were detected in Site soil are due to anthropogenic fill that is present on the property.

Maximum concentrations of PAHs and lead detected in Site soil were compared to 90th percentile background concentrations in "soil associated with fill material", as shown in Table 2. The maximum concentrations of the majority of PAHs were less than 90th percentile background concentrations. While concentrations of chrysene, fluoranthene, fluorene, and phenanthrene were greater than the 90th percentile background concentrations, a review of the data used to calculate the 90th percentile background concentration indicates that the maximum concentrations of chrysene (8.3 mg/kg), fluoranthene (19 mg/kg), fluorene (4.9 mg/kg), and phenanthrene (25 mg/kg) detected at the Site are within the 95th percentile background concentrations and are therefore well within the typical range of background concentrations in anthropogenic fill.

Similarly, lead was detected in Site soil at concentrations ranging from 57 and 3,300 mg/kg. Only the maximum concentration of lead was greater than the 90th percentile background concentration in anthropogenic fill. While the highest detected concentration, 3,300 mg/kg, is greater than the 90th percentile background concentration, this concentration is well within the lead concentrations typically observed in pre-1983 fill material.

According to the Draft Historic Fill Technical Update (MassDEP, 2016), the fingerprint of pre-1983 fill that may have originated in whole or in part from lead-based paints that were either used on-site or at the site from where the soil originated includes:

- highly variable lead concentrations throughout the site;
- higher concentrations near buildings and in shallow soils (presuming undisturbed)
- an average lead concentration of 500 to 1000 mg/kg; and
- a few lead values as high as 5000 to 10,000 mg/kg

Because the Site was filled in with material from the "Great Fire of 1889" and a second fire occurred on the Site in 1981, lead paint from the buildings was interred within the fill. The lead concentrations observed in Site soil, match this signature. Based upon this analysis, the PAHs and lead observed in Site soil were attributed to anthropogenic fill material observed at the Site.

5.4.3 Groundwater

Groundwater exceedances of C9-C18 aliphatic and C11-C22 aromatic EPH were identified at MW-3, shortly after the excavation of the source material in 2015. During the most recent groundwater monitoring conducted at the Site, groundwater samples were submitted for analysis of EPH. No EPH

exceedances of the GW-2 or GW-3 standards were identified at the Site wells, including the replacement well for MW-3 (MW-103).

5.4.4 Surface Water / Sediment

The closest surface water bodies to the Site are Lynn Harbor and Nahant Bay, located approximately 500 and 1,500 feet south and west of the Site, respectively. Current groundwater monitoring results indicate that EPH in groundwater does not exceed the GW-2 or GW-3 standards. Therefore, surface water and/or sediment are not anticipated to be impacted and as such, no surface water or sediment sampling was performed as part of the Site investigations.

5.4.5 Soil Gas / Indoor Air

The McGee Building and new addition are currently occupied. During construction of the new addition, a vapor barrier was installed beneath the foundation as a conservative mitigation measure based upon the earlier soil and groundwater exceedances. After removal of the impacted soil during the RAM, only one exceedance of the S-1 standards (for C11-C22 aromatic EPH) was identified, and no exceedances of GW-2 or GW-3 standards were identified at the Site. Therefore, no soil gas or indoor air monitoring was conducted.

6.0 CONCEPTUAL SITE MODEL

The findings of the prior sections were used to refine the Conceptual Site Model (CSM) which presents the current understanding of contaminant sources and distributions, impacted media, release mechanisms, contaminant migration pathways, and potential receptors.

The Disposal Site is part of a 10.85-acre lot developed with a three-story educational building surrounded by landscaped and paved parking areas. The soils at the Site include a surficial loam and brown silt underlain by historic fill consisting of silt, sand, and gravel with brick, concrete, glass, metal debris, ash, and trace asphalt. The fill material is partly the result of two city-wide historic fires which occurred in 1889 and 1981. The underlying material is sandy silts and silty sands containing trace amounts of gravel. In the vicinity of TP-7, an approximately 2 ft thick layer of peat was identified. Beneath the peat or sandy silts/silty sands is a silt and clay layer.

No public or private drinking water wells exist on the Site and the Site does not lie within a current or potential drinking water source area, a MassDEP approved Zone II Area, or an IWPA. There are no private, potable water (i.e., drinking water) wells listed within 500 feet of the Site. The closest surface water bodies to the Site are Lynn Harbor and Nahant Bay, located approximately 500 and 1,500 feet south and west of the Site, respectively.

Extractable petroleum hydrocarbons (EPH) are the Site contaminants of concern (COCs). The primary source of EPH is historic fill that was removed from the Site during the Site RAM in 2015 (150 cubic yards of fill removed). During the December 2016 follow-up Site investigation, the identification of one soil exceedance (location MW-105, between 10 and 15 ft bgs) suggests that there may be minor localized source material elsewhere in historic fill. However, average seasonal groundwater concentrations were not identified above Method 1 standards during the groundwater monitoring events conducted at the Site.

Impacted media at the Site is limited to soil. While minor groundwater impacts were identified in one location shortly after the removal of the primary source material, seasonal groundwater concentration were not identified at the Site during the 2017 groundwater monitoring. Since no ongoing groundwater impacts have been identified, and limited soil contamination was identified (at depths greater than 10 ft bgs), soil gas vapor intrusion is also not considered a potential contaminant migration pathway. Based upon the absence of groundwater impacts at the Site and the distance to the nearest surface water (Lynn Harbor), neither surface water nor sediment are considered potential contaminant migration pathways.

Under current and future use risk scenarios, potentially affected human receptors include students, visitors, and staff of the College, as well as construction/utility workers, who may be involved in future construction activities at the Site. Potentially risk scenarios during excavation include exposure to contaminated soil via inhalation, ingestion and/or dermal adsorption.

The disposal Site boundaries for the Site correspond to the property boundary. Site COCs (petroleum hydrocarbons) appear to be limited to impacts from historic fill at the Site. The primary source material has been removed from the Site.

7.0 EXPOSURE ASSESSMENT

7.1 Receptor Information

The Site is located within the NSCC's Lynn Campus at 300 Broad Street in Lynn, Massachusetts. The building on the Site is the McGee building (which has a newly completed addition), used for classrooms and administrative offices for the college. The remainder of the parcel consists of grass, landscaped areas, paved walkways, and paved parking areas.

Potential current include students and staff of the College, as well as visitors. Because there are no restrictions on Site use, potential future receptors include hypothetical on-Site residents. Potential future receptors also include construction/utility workers, who may be involved in future construction activities at the Site.

7.2 Fate and Transport of Oil and Hazardous Materials

Review of fate and transport processes at the Site provides insight into migration characteristics of the COCs (petroleum hydrocarbons) and potential risks to human health and the environment. This section provides a brief summary of the fate and transport processes for the constituents detected and their potential for contaminant migration.

The primary source of petroleum hydrocarbons (EPH) was approximately 150 cubic yards of localized historic fill that was removed from the Site in 2015. Historic fill is found throughout the Site to a maximum depth of approximately 15 ft bgs.

During the December 2016 follow-up investigation, the identification of one soil EPH exceedance (location MW-105, between 10 and 15 ft bgs) suggests that there may be other minor localized source material at the Site. However, petroleum hydrocarbons have low aqueous solubility and have a strong tendency to sorb onto aquifer materials. No groundwater exceedances were identified during the January 2017 groundwater monitoring event, and is anticipated that any other petroleum hydrocarbon sources are minor. Since groundwater impacts were not identified in the January 2017 monitoring event, the potential for vapor intrusion at the Site is considered low.

Weston & Sampson evaluated the potential risk from the Site in a Method 1 Risk Characterization, as summarized in Section 7.0.

7.3 Migration Pathways and Exposure Potential

7.3.1 Soil

During the December 2016 follow-up investigation, the identification of one soil EPH exceedance (location MW-105, between 10 and 15 ft bgs) suggests that there may be other minor localized soil exceedances within historic fill at the Site.

Under current Site conditions, use by NSCC employees and students is expected to be high frequency and low intensity. Activities conducted at the Site are not expected to disturb soil and result in direct contact with the soil or inhalation of soil derived dust. However, if any area of the Site is

redeveloped in the future, employees, students, or construction/utility workers may have a low frequency and high intensity of soil exposure during excavation activities.

Potential exposure to Site soils through ingestion, inhalation, absorption and dermal contact by employees, students, or construction/utility workers during future construction is considered a potential exposure pathway.

7.3.2 Groundwater

Site assessment in 2015 identified exceedances of C9-C18 aliphatic and C11-C22 aromatic EPH GW-2 or GW-3 standards at one location. No groundwater exceedances were identified during the January 2017 groundwater monitoring event. For the purposes of further evaluation, however, groundwater was considered a potential migration pathway for the risk assessment.

Potential exposure to groundwater through ingestion, inhalation, absorption and dermal contact by construction/utility workers during potential future construction within the groundwater table is considered a potential exposure pathway.

7.3.3 Surface Water / Sediment

The closest surface water bodies to the Site are Lynn Harbor and Nahant Bay, located approximately 500 and 1,500 feet south and west of the Site, respectively. Current groundwater monitoring results indicate that EPH in groundwater does not exceed the GW-2 or GW-3 standards. Therefore, due to the distance to the nearest surface water and the recent groundwater monitoring results, surface water and sediment are not considered potential migration pathways at the Site.

7.3.4 Soil Gas / Indoor Air

Analysis of groundwater samples in January 2017 did not identify concentrations of EPH above GW-1 standards. Therefore, the potential impact to indoor air at the Site buildings is not considered a potential migration pathway.

7.3.5 Underground Utilities

If subsurface utilities are present at the Site, the groundwater table (between 5 and 10 ft bgs) may intersect utility trenches. Therefore, subsurface utilities may present a preferential pathway for groundwater migration at this Site.

8.0 METHOD 1 RISK CHARACTERIZATION

8.1 Introduction

A Method 1 Risk Characterization was performed to establish whether a level of No Significant Risk (NSR) for human health exists or can be achieved at the Site. The Method 1 Risk Characterization considered both current and reasonably foreseeable future Site activities and uses. Soil is conservatively categorized as S-1. The S-1 standards are the most stringent and considered to be protective of human health for residential use, which has the highest exposure potential and the most sensitive receptors (young children, elderly, pregnant females). Consequently, if concentrations are below S-1 standards, it may be concluded that a condition of NSR exists for unrestricted use, and no further risk characterization or remedial response actions are required.

Groundwater at the Site is currently classified as GW-2 and GW-3. The GW-2 classification pertains to groundwater where the average annual depth to the water table is less than 15 feet bgs and where groundwater is located within 30 feet of an existing or planned building or structure that is or will be occupied. The GW-3 classification pertains to groundwater that may potentially impact surface water and applies to all groundwater in Massachusetts.

8.2 Exposure Scenarios

Under existing conditions, there exists potential for exposure to contaminants at the Site by employees, students, or construction/utility workers during future construction. It was also conservatively assumed that the Site may be redeveloped in the future and that residents may live on-Site. Exposure may be associated with ingestion, absorption, and dermal contact of impacted soils and inhalation of fugitive dust during construction. Potential human exposure to groundwater would most likely be limited to construction/utility workers during construction within the groundwater table.

8.3 Exposure Points

For soil, the Exposure Point is defined by the horizontal and vertical distribution of the contaminated soil in combination with the soil category determined to be applicable. For groundwater, the Exposure Point is the groundwater resource itself, as measured at each wellhead.

8.4 Exposure Point Concentrations

In accordance with 310 CMR 40.0926 of the MCP, the Exposure Point Concentrations (EPCs) for each compound in each medium in each exposure point must be identified and documented. The EPC may then be compared to the applicable Method 1 Standards to determine if a condition of No Significant Risk has been achieved.

8.4.1 Soil

The EPCs for the COCs identified in soil (EPH: C9-C18 aliphatics, C19-C36 aliphatics, and C11-C22 aromatics) were based upon the arithmetic mean concentrations. The arithmetic mean concentrations were determined to be applicable for EPCs because greater than 75% of the data points used in the averaging procedure were less than the applicable standard and no data point used in the averaging process was greater than ten times the applicable standard. The results of the Method 1 Risk Assessment for Site soils are presented in Table 7. EPCs in soil are below the applicable Method 1 S-1/GW-2 and S-1/GW-3 standards.

8.4.2 Groundwater

The EPCs for C9-C18 aliphatic and C11-C22 aromatic EPH compounds at well MW-3 (replaced by MW-103 in 2016) were determined based upon the temporal average of the results collected at MW-3 in August 2015 (C9-C18: 9.8 mg/L and C11-C22: 6.2 mg/L) and at MW-103 in January 2017 (C9-C18: <0.10 mg/L and C11-C22: 0.51 mg/L). Since C9-C18 aliphatic EPH was not detected at MW-103 in 2017, one-half the detection limit (0.05 mg/L) was used to calculate the C9-C18 aliphatic EPH. The EPCs in groundwater for C9-C18 aliphatic EPH (4.9 mg/L) and C11-C22 aromatic EPH (3.4 mg/L) at MW-3/MW-103 do not exceed the lowest of the Method 1 GW-2 or GW-3 standards (5 mg/L).

8.5 Imminent Hazard Evaluation

The need to conduct an Imminent Hazard (IH) Evaluation was evaluated pursuant to 310 CMR 40.0951(1) and in accordance with 310 CMR 40.0191. Based on the nature and extent of contamination, and surrounding receptors, an IH evaluation is not warranted.

8.6 Risk of Harm to Safety and Public Welfare

Risk of harm to public welfare was characterized in accordance with 310 CMR 40.0994. For current and reasonably foreseeable conditions, no public welfare conditions of concern listed in 310 CMR 40.0994(4) were identified at the Site. Petroleum concentrations identified in soil and groundwater are well below Upper Concentration Limits (UCLs) listed in 310 CMR 40.0996(2). Therefore, a condition of No Significant Risk of harm to public welfare exists at the Site.

Based on our evaluation, conditions at the Site do not currently and will not in the foreseeable future pose a threat of physical harm or bodily injury to people; therefore, a condition of No Significant Risk of harm to safety has been achieved at the Site.

8.7 Risk Characterization Conclusions

The results of the Method 1 Risk Characterization indicate that a condition of NSR to human health exists at the Site and that closure can be achieved without conducting remedial actions. A numerical summary of the Method 1 Risk Characterization for soil is included as **Table 7**.

9.0 DATA USABILITY ASSESSMENT

The Representativeness Evaluation and Data Usability Assessment (REDUA) presented in this section were prepared in general accordance with MassDEP Policy WSC-07-350, dated September 2007.

9.1 Representativeness Evaluation

The purpose of the Representativeness Evaluation is to demonstrate the following:

- The spatial and temporal data sets used to support this PSS are adequate considering the Site's historical use, hydrogeological and physical characteristics, and field observations;
- The data set in total sufficiently characterizes conditions at the Site and supports a coherent CSM;
- The cumulative data used to characterize the nature and extent of contamination at the Site, the risk to health, safety, public welfare and the environment, and the elimination/control of OHM sources is adequate; and,
- The use of the data to support this PSS is justified considering any inconsistent and incomplete information, and potential sources of uncertainty.

Sections 9.1.1 through 9.1.8 below describe the elements that were evaluated in the Representativeness Evaluation in support of this PSS.

9.1.1 Conceptual Site Model

The CSM for the Site is provided in Section 6.0.

9.1.2 Use of Field Screening Data

During the course of investigative activities associated with this PSS, field data were recorded during sample collection activities. Field observations and field screening data were reviewed together with the associated analytical data as part of the data quality assessment. In general, the field screening results correlated with the laboratory analytical results. The data sets collected during the course of the investigation are considered appropriate for the data quality objectives of this PSS.

9.1.3 Sampling Rationale

The sampling rationale of the subsurface investigations was to assess the nature and extent of contamination at the Site. The type of medium sampled and parameters evaluated for each location were based on previous investigations and experience evaluating contaminant conditions at similar sites.

9.1.4 Number, Spatial Distribution, and Handling of Samples

Weston & Sampson determined the number, spatial distribution, and handling of samples based on similar project experience and an initial site reconnaissance. The number and spatial distribution of samples is adequate to support the conclusions of this PSS.

9.1.5 Temporal Distribution of Samples

Adequate characterization should include consecutive seasonal rounds of gauging to provide an understanding of the magnitude of water table fluctuations and their potential effect on groundwater

concentrations. Historic assessment activities, including Weston & Sampson's completed investigation activities involved collection of groundwater samples over cumulative seasons. The Site assessments have provided sufficient temporal evaluation to support the findings of this PSS.

9.1.6 Completeness

There were no data gaps identified in the sampling locations and analytical data collected during the subsurface investigations. The target completeness for critical samples for data set validity was established as 100% and achieved.

9.1.7 Inconsistency and Uncertainty

No inconsistencies were identified with analytical results, field screening measurements, or field observations. Potential uncertainty exists for specific soil and sediment samples, however justifications are provided in the REDUA in Appendix F.

9.1.8 Information Considered Unrepresentative

No analytical data collected was considered unrepresentative for purposes of risk characterization and the data usability assessment. The sample results from the field assessments are considered to be representative of current conditions at the Site.

9.2 Data Usability Assessment

The Data Usability Assessment evaluates the validity of the data being used for MCP risk characterization and/or other response actions, focusing on actual quality assurance/quality control (QA/QC) procedures used in the field during sample collection, and laboratory analytical methods. The broad performance standards for the acquisition, analysis, and reporting of the analytical and environmental monitoring data used to support MCP response actions are specified in 310 CMR 40.0017 and 40.0191(2)(c).

To facilitate the application of these MCP performance standards, MassDEP published a Compendium of Analytical Methods (CAM), a series of recommended protocols for the acquisition, analysis, and reporting of MCP-related analytical data. The minimum criteria and performance standards for the collection and analysis of data to be used in MCP risk assessments, background determinations, and/or site closure are outlined in the current MassDEP publications WSC-CAM-VIIA (revised January, 2015) and WSC-10-320 (effective July 1, 2010). Samples collected and analyzed in compliance with CAM have achieved "Presumptive Certainty", which assures that the precision, accuracy, and sensitivity have been adequately determined.

9.2.1 PARCCS Evaluation

Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements. Thus, data usability is also evaluated by the following parameters: precision, accuracy, representativeness, comparability, completeness and sensitivity (referred to as PARCCS). With the exception of representativeness, the PARCCS parameters are controlled by the laboratory through strict QA/QC procedures, and any issues that might affect data usability are identified and described in the case narrative of each laboratory report. Data usability tables summarizing the case narrative for each soil and groundwater laboratory report that included qualifiers are included in Appendix F.

9.2.2 Precision

Precision is a measure of mutual agreement among individual measurements of the same property and is generally expressed as the reproducibility of the analytical result between initial sample and field duplicate as expressed by the relative percent difference (RPD). Precision is a measure of the reproducibility of sampling technique, matrix homogeneity, and analytical method. A review of laboratory control sample/laboratory control sample duplicate (LCS/LCSD) information indicates that the data appear to be consistent from sample to sample, and consistent with field observations. The data are considered suitably precise to support this PSS, and no further action was taken. Samples that displayed variability are discussed in the REDUA provided in Appendix F.

9.2.3 Accuracy

Accuracy is the degree of agreement of a measurement with an accepted reference or true value. Accuracy is reported as the percent recovery of known concentrations added to the matrix sample to assess the influence of matrix on the analytical method. The data are considered suitably accurate to support this PSS. Samples that displayed low or high biases are discussed in the REDUA provided in Appendix F.

9.2.4 Representativeness

Representativeness expresses the degree to which data accurately and precisely represent a characteristic of the population, parameter variation, or environmental condition. Weston & Sampson designed the sampling protocol to ensure representativeness by incorporating factors such as site history, visual and olfactory observations, physical features, proper sample collection and preservation procedures, appropriate testing methodology, and field screening data. The samples collected at the Site are considered representative based on the known subsurface conditions.

9.2.5 Completeness

Completeness is a measure of whether enough data has been collected to support an LSP opinion and is expressed as a percent representing the ratio of valid data to expected data. Data may be considered invalid for reasons such as exceeding the holding time, poor calibration of analytical instruments, and poor surrogate or matrix spike recoveries. Based on a review of the case narratives and lab QA/QC samples, the data collected for this Site is complete and sufficient to support an LSP opinion.

9.2.6 Comparability

Comparability refers to the level of confidence with the correlation of data collected during separate events or by different persons, or analyzed by different methods. This may be measured qualitatively based on a review of sampling and testing procedures or quantitatively by comparison of sample data collected at the same location using the same sampling and testing procedures. All sampling and testing procedures were followed utilizing accepted standards for quality assurance and quality control, and data among separate sampling events and by different staff are comparable.

9.2.7 Sensitivity

Sensitivity is a measure of whether the laboratory method was sufficient to report detected contaminants at concentrations at or below the applicable MCP cleanup criteria. For example, if a contaminant is reported as “not detected”, but the laboratory method detection limit was higher than the MCP cleanup criteria, we would be unable to state unequivocally that the tested medium was free

of impact consistent with a level of NSR. In general, sampling results were adequately sensitive to evaluate whether NSR exists at the Site. Weston & Sampson considers the data to be at a sufficient level of sensitivity to support the conclusions in this PSS.

In summary, the results of the PARCCS evaluation indicate that data quality indicators are acceptable. The sample data obtained during the Weston & Sampson subsurface investigations are adequate for characterizing Site conditions and risk.

10.0 PHASE II CSA CONCLUSIONS

In January 2015, soil impacted by petroleum hydrocarbons was discovered during the excavation of test pits prior to construction of an addition to the McGee Building. In March 2015, nine soil borings were advanced to define the lateral extent of impacts near TP-7 and in June 2015 a RAM was implemented for excavation and disposal of approximately 150 cubic yards of petroleum impacted historic fill. Following completion of RAM activities, a Phase I Initial Site Investigation was conducted, which included soil sampling and the installation and monitoring of four groundwater monitoring wells (MW-1 through MW-4). Exceedances of the Method 1 GW-2 cleanup standard for C9-C18 aliphatic extractable petroleum hydrocarbons (EPH) and the Method 1 GW-3 cleanup standard for C11-C22 aromatic EPH were detected at one location (MW-3). These monitoring wells were removed during construction of the McGee Building addition.

As part of the Phase II CSA, in December 2016 six soil borings (each completed as a groundwater monitoring well) were advanced to evaluate the spatial extent and seasonal effects of petroleum impacts on groundwater and to assess the vapor intrusion pathway with respect to the original McGee Building and the new addition. One monitoring well (MW-103) was installed to replace well MW-3, where exceedances were detected in 2015. One soil exceedance was identified at one location (MW-105, below 10 ft bgs). No groundwater exceedances were identified.

Extractable petroleum hydrocarbons (EPH) are the Site COCs. The primary source of EPH (approximately 150 cubic yards of localized historic fill) was removed from the Site during the Site RAM in 2015. Historic fill is found throughout the Site to a maximum depth of approximately 15 ft bgs. Groundwater is a potential migration pathway, however analysis of additional seasonal groundwater samples in 2017 did not identify concentrations of EPH above GW-2 or GW-3 standards. Based on the absence of groundwater impacts in 2017, the potential impact to indoor air at the Site buildings is not considered a potential migration pathway.

Weston & Sampson performed a Method 1 Risk Characterization to establish whether a level of No Significant Risk (NSR) for human health exists or can be achieved at the Site. The Method 1 Risk Characterization considered both current and reasonably foreseeable future Site activities and uses. Soil was conservatively categorized as S-1 and groundwater was classified as GW-2 and GW-3. Based on the results of the risk assessment, the Site was found to pose no significant risk of of harm to human health, environment, public welfare, and safety.

11.0 PHASE II CSA REPORT REQUIREMENTS

The MCP requirements for a Phase II CSA (310 CMR 40.0835(4)) are presented below in ***bold italicized*** text along with the responses in plain text. Public Notification letters are included in Appendix A of this report.

(a) Disposal site name, location, and locus map;

North Shore Community College – McGee Building
300 Broad Street
Lynn, Massachusetts 01901

The Locus Map for the Site showing its location is provided as Figure 1.

(b) Detailed disposal site map(s);
Detailed maps depicting the disposal site map are provided in the Figures section of this report.

(c) Disposal site history;
A summary of the Site history is provided in Section 3.0 of this report.

(d) Site hydrogeological characteristics;
A summary of Site hydrogeological characteristics are provided in Section 4.0 of this report.

(e) Environmental fate and transport of oil and/or hazardous material;
Details regarding the fate and transport of oil and/or hazardous material processes for the constituents identified at the Site are provided in Section 7.0 of this report.

(f) Nature and extent of contamination;
The nature and extent of contamination is provided in Section 5.0 of this report.

(g) Exposure assessment;
The identification and characteristics of all potential human and environmental receptors that could be impacted from the Site is provided in Section 7.0 of this report.

(h) Risk characterization;
The Method 1 Risk Characterization is summarized in Section 8.0 of this report.

(i) Conclusions;
A summary of the Phase II CSA findings is provided in Section 9.0.

12.0 PHASE II COMPLETION STATEMENT

In accordance with 310 CMR 40.836, a Phase II Completion Statement is submitted with this Phase II CSA Report.

This Phase II CSA Report was based on an assessment performed by Weston & Sampson, and on historical information provided by DCAMM, and was prepared in accordance with the applicable requirements specified in 310 CMR 40.835. The Phase II CSA conforms with applicable Phase II requirements of the MCP and meets the Phase II performance standard.

In accordance with 310 CMR 40.0836(3)(a)(3), Weston & Sampson has evaluated the current Tier II Classification of the Site based on the findings of the Phase II CSA detailed in this report. Based on this evaluation, Weston & Sampson concludes that this Phase II CSA does not identify new or additional information which would change the current NRS Score or Tier II Classification for the Site.

Based on the findings of the above mentioned Phase II CSA Report the current knowledge of the Site and surrounding area conditions, it is the opinion of the Licensed Site Professional (LSP)-of-Record that the requirements of a Permanent Solution under 310 CMR 40.1000 have been met, and a Permanent Solution Statement supported by information provided in the Phase II report shall be submitted to the Department.

As specified in 310 CMR 40.836 and 40.0009 of the MCP, a Certification of the Submittal is included with this Phase II CSA Report. The Certification of the Submittal is included in Section J of the Comprehensive Response Action Transmittal Form (BWSC-108) submitted concurrently with this report.

13.0 PERMANENT SOLUTION STATEMENT

13.1 Permanent Solution Statement

The MCP requirements for the Permanent Solution Statement 310 CMR 40.1056 are shown below in ***bold italic text*** and the responses are shown in normal text. A PSS shall include, at a minimum, the following:

(a) the site or disposal site name, address and DEP Release Tracking Number(s);

Site Name:	North Shore Community College - Lynn
Address:	300 Broad Street Lynn, Massachusetts
Release Tracking Number:	3-32907
UTM Coordinates:	N 4,702,827 m E 340,105 m

(b) whether it is a Permanent Solution with No Conditions or a Permanent Solution with Conditions;

The Permanent Solution is with no Conditions per 310 CMR 40.1041.

(c) except where the concentrations of oil and/or hazardous material are consistent with or have been reduced to Background or where a threat of release has been abated, the Method(s) (Methods 1, 2, or 3) used to characterize the risk of harm posed by the disposal site to health, safety, public welfare and the environment, pursuant to 310 CMR 40.0900;

A Method 1 Human Health Risk Characterization, as discussed in Section 8.0, was used to characterize the risk of harm posed by the disposal site to health, safety, public welfare and the environment, pursuant to 310 CMR 40.0900.

(d) the relationship of the Permanent Solution Statement to any other Permanent or Temporary Solution Statements that have been filed for the disposal site, if applicable, together with a statement as to whether any additional response actions are needed for any other portions of the disposal site;

No prior Temporary or Permanent Solution Statements have been filed for the Site.

(e) indication as to whether the Permanent Solution includes the implementation of an Activity and Use Limitation, and if so, the type of Activity and Use limitation implemented at the at the disposal site;

This Permanent Solution does not include the implementation of an AUL.

(f) indication as to whether the Permanent Solution is based upon assumptions about the current or future site activities, uses or conditions that do not require an Activity and Use Limitation pursuant to 310 CMR 40.1013 and a description of those assumptions;

The Permanent Solution is based upon assumptions about the current and future site activities, uses or conditions that do not require an Activity and Use Limitation pursuant to 310 CMR 40.1013. Under current and future use risk scenarios, potentially affected human receptors include students, visitors, staff of the College, hypothetical on-Site residents, as well as construction/utility workers, who may be involved in future construction activities at the Site. Best management practices (BMPs) should be used during future construction activities to avoid potentially risk scenarios during excavation, which include exposure to contaminated soil via inhalation, ingestion and/or dermal adsorption. Because a Condition of No Significant Risk exists for evaluated exposure scenarios, an Imminent Hazard Condition is also determined to not exist.

(g) indication as to whether the Permanent Solution is based upon the effective operation of one or more Active Exposure Pathway Mitigation Measures pursuant to 310 CMR 40.1025;

No Active Exposure Pathway Mitigation Measures are anticipated to be implemented for this Permanent Solution.

(h) except where specifically exempted by the Department based upon the Department's level of involvement in the oversight of response actions at the site or disposal site, an Opinion from a Licensed Site Professional as to whether the requirements of the applicable category of Permanent Solution specified in 310 CMR 40.1000 have been met;

The data supporting the Permanent Solution with Conditions is provided in the body of this report. By stamping this report, the LSP-of-Record, Mr. Frank Ricciardi, has provided the Opinion that the Permanent Solution has met the requirements of the 310 CMR 40.1000.

(i) a certification of the Permanent Solution Statement and all documents submitted with the Permanent Solution Statement as required by 310 CMR 40.0009;

The certification of this Permanent Solution is provided in the MassDEP Bureau of Waste Site Cleanup (BWSC) Form 104 and associated eDEP submittal.

Public notification letters to the Medfield Board of Health and Chief Administrative Officer are provided in Appendix A.

(j) indication as to whether oil and/or hazardous material exceed one or more applicable Upper Concentration Limits in Soil or Groundwater, as described in 310 CMR 40.0996; and

No oil and/or hazardous material exceeds UCLs.

(k) indication as to whether the analytical data used to support the Permanent Solution was generated pursuant to the Department's Compendium of Analytical Methods.

A review of the analytical data usability is provided in Section 9.0 – Data Usability Assessment of this Report and the data used to prepare this Permanent Solution is pursuant to the MassDEP's Compendium of Analytical Methods.

14.0 LIMITATIONS

This report was prepared for the use of DCAMM, exclusively. The findings provided by Weston & Sampson in this report are based solely on the information reported in this document. Future sampling, and/or information that was not available to Weston & Sampson at the time of the study, may result in a modification of the findings stated in this report.

Should additional information become available concerning this Site or neighboring properties, which could directly impact the Site in the future, that information should be made available to Weston & Sampson for review so that, if necessary, conclusions presented in this report may be modified. The conclusions of this report are based on Site conditions observed by Weston & Sampson personnel at the time of the study, information provided by DCAMM and samples collected and analyzed on the dates shown or stated in this report. This report has been prepared in accordance with generally accepted engineering and geological practices. No other warranty, express or implied, is made.

Public Notification Letters

5 Centennial Drive, Peabody, MA 01960 (HQ)
Tel: 978.532.1900

June 5, 2017

Ms. Michele Desmarais
Director of Public Heath
Lynn Board of Health
3 City Hall Square
Lynn, MA 01901

Re: **Phase II Comprehensive Site Assessment (CSA) Report and Permanent Solution Statement**
North Shore Community College
300 Broad Street
Lynn, Massachusetts
Release Tracking Number (RTN): 3-32907

Dear Ms. Desmarais,

Weston & Sampson, on behalf of the Division of Capital Asset Management and Maintenance (DCAMM), is hereby notifying your office that a Phase II Comprehensive Site Assessment (CSA) Report and Permanent Solution Statement (PSS) has been submitted to the Massachusetts Department of Environmental Protection (MassDEP) for the above-referenced location ("the Site"). The Phase II CSA Report and PSS has been prepared based on the results of the assessment of the Site. In accordance with 310 CMR 40.0830 and 40.1056 of the Massachusetts Contingency Plan (MCP), the Site has been classified as a Tier II site. Detected constituents are related to petroleum hydrocarbons found in soil and groundwater following test pitting activities at the Site.

This notification is provided in accordance with the public involvement requirements of the Massachusetts Contingency Plan (MCP), 310 CMR 40.0839. The Phase II CSA Report and PSS is on file and available for public review at online at the MassDEP's website (http://public.dep.state.ma.us/SearchableSites2/Search.aspx).

If you have any questions or concerns regarding this notice, please do not hesitate to contact the undersigned at (978) 532-1900.

Sincerely,

WESTON & SAMPSON ENGINEERS, INC.

Frank Ricciardi, P.E., LSP
Vice President, EG&G Program Manager

NOTICE OF A PERMANENT SOLUTION STATEMENT

North Shore Community College
300 Broad Street
Lynn, Massachusetts

RELEASE TRACKING NUMBER (RTN) 3-32907

Pursuant to the Massachusetts Contingency Plan, (310 CMR 40.1000) a Permanent Solution Statement has been submitted to the Massachusetts Department of Environmental Protection at the above-referenced location.

A release of oil and/or hazardous materials has occurred at this location, which is a disposal site as defined by M.G.L. c. 21E, Section 2. This site has been classified as Tier II, pursuant to 310 CMR 40.0500. Response actions at this site were conducted in accordance with the Massachusetts Contingency Plan (310 CMR 40.0000). The Permanent Solution Statement has been prepared by Weston & Sampson Engineers, Inc. based on the results of a review of historic reports, response actions, and site investigation.

M.G.L. c. 21E and the Massachusetts Contingency Plan provided additional opportunities for public notice of and involvement in decisions regarding response actions at disposal sites. The Chief Municipal Official and Board of Health of the community in which the site is located were notified of major milestones and events, pursuant to 310 CMR 40.1403.

To obtain more information on this disposal site, please contact: Frank Ricciardi, P.E., LSP, of Weston & Sampson Engineers, Inc., Five Centennial Drive, Peabody, Massachusetts 01960 (1-978-532-1900).

NOTES:
1) THE STRATIFICATION LINES REPRESENT THE APPROXIMATE BOUNDARY BETWEEN SOIL TYPES. TRANSITIONS MAY BE GRADUAL.
2) WATER LEVEL READINGS HAVE BEEN MADE IN THE DRILL HOLES AT TIMES AND UNDER CONDITIONS STATED ON THIS BORING LOG. FLUCTUATIONS IN THE LEVEL OF GROUNDWATER MAY OCCUR DUE TO OTHER FACTORS THAN THOSE PRESENT AT THE TIME MEASUREMENTS ARE MADE.

BORING No.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

REVISED REPORT - 1/5/2017 - Per clients requset, only report EPH ranges.

MADEP-EPH-04-1.1

SPE cartridge contamination with non-petroleum compounds, if present, is verified by GC/MS in each method blank per extraction batch and excluded from C 11-C22 aromatic range fraction in all samples in the batch. No significant modifications were made to the method.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Tod E. Kopyscinski
Laboratory Director

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit
DL	Method Detection Limit
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

Sample Receipt Checklist

CLIENT NAME: Weston & Sampson **RECEIVED BY:** EB **DATE:** 12/22/16

1) **Was the chain(s) of custody relinquished and signed?** **Yes** ✓ **No** ____ **No COC Incl.**

2) **Does the chain agree with the samples?** **Yes** ✓ **No** ____
If not, explain:

3) **Are all the samples in good condition?** **Yes** ✓ **No** ____
If not, explain:

4) **How were the samples received:**
On Ice ✓ Direct from Sampling ____ Ambient ____ In Cooler(s) ✓
Were the samples received in Temperature Compliance of (2-6°C)? **Yes** ✓ **No** ____ **N/A** ____
Temperature °C by Temp blank ____ Temperature °C by Temp gun 4.3

5) **Are there Dissolved samples for the lab to filter?** **Yes** ____ **No** ✓
Who was notified ____ Date ____ Time ____

6) **Are there any RUSH or SHORT HOLDING TIME samples?** **Yes** ____ **No** ✓
Who was notified ____ Date ____ Time ____

7) **Location where samples are stored:** Log In

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: ____

8) **Do all samples have the proper Acid pH:** **Yes** ____ **No** ____ **N/A** ✓

9) **Do all samples have the proper Base pH:** **Yes** ____ **No** ____ **N/A** ✓

10) **Was the PC notified of any discrepancies with the CoC vs the samples:** **Yes** ____ **N/A** ✓

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		16 oz amber	
500 mL Amber		8 oz amber/clear jar	
250 mL Amber (8oz amber)		4 oz amber/clear jar	9
1 Liter Plastic		2 oz amber/clear jar	
500 mL Plastic		Plastic Bag / Ziploc	
250 mL plastic		SOC Kit	
40 mL Vial - type listed below		Perchlorate Kit	
Colisure / bacteria bottle		Flashpoint bottle	
Dissolved Oxygen bottle		Other glass jar	
Encore		Other	

40 mL vials: # HCl ____ # Methanol ____ **Time and Date Frozen:**
Bisulfate ____ # DI Water ____
Thiosulfate ____ Unpreserved ____

(Rejection Criteria Listing - Using Sample Acceptance Policy)

Any False statement will be brought to the attention of Client

Question	Answer (True/False) T/F/NA	Comment
1) The cooler's custody seal, if present, is intact.	N/A	
2) The cooler or samples do not appear to have been compromised or tampered with.	T	
3) Samples were received on ice.	T	
4) Cooler Temperature is acceptable.	T	
5) Cooler Temperature is recorded.	T	4.3 with gun
6) COC is filled out in ink and legible.	T	
7) COC is filled out with all pertinent information.	T	
8) Field Sampler's name present on COC.	T	
9) There are no discrepancies between the sample IDs on the container and the COC.	T	
10) Samples are received within Holding Time.	T	
11) Sample containers have legible labels.	T	
12) Containers are not broken or leaking.	T	
13) Air Cassettes are not broken/open.	N/A	
14) Sample collection date/times are provided.	T	
15) Appropriate sample containers are used.	T	
16) Proper collection media used.	T	
17) No headspace sample bottles are completely filled.	T	
18) There is sufficient volume for all requsted analyses, including any requested MS/MSDs.	T	
19) Trip blanks provided if applicable.	N/A	
20) VOA sample vials do not have head space or bubble is <6mm (1/4") in diameter.	N/A	
21) Samples do not require splitting or compositing.	T

Affirmative response to Questions A throughF is required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	☑ Yes	☐ No[1]
B	Were the analytical method(s) and all associated QC requirements specificed in the selected CAM protocol(s) followed?	☑ Yes	☐ No[1]
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	☑ Yes	☐ No[1]
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, Quality Assurance and Quality Control Guidlines for the Acquisition and Reporting of Analytical Data?	☑ Yes	☐ No[1]
E a	VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	☑ Yes	☐ No[1]
E b	APH and TO-15 Methods only: Was the complete analyte list reported for each method?	☐ Yes	☐ No[1]
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all No responses to Qestions A through E)?	☑ Yes	☐ No[1]
	A response to questions G, H and I below is required for "Presumptive Certainty" status		
G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	☑ Yes	☐ No[1]
	***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.**		
H	Were all QC perfomance standards specified in the CAM protocol(s) achieved?	☑ Yes	☐ No[1]
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	☑ Yes	☐ No[1]

[1] *All Negative responses must be addressed in an attached Environmental Laboratory case narrative.*

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

MADEP-EPH-04-1.1

SPE cartridge contamination with non-petroleum compounds, if present, is verified by GC/MS in each method blank per extraction batch and excluded from C11-C22 aromatic range fraction in all samples in the batch. No significant modifications were made to the method.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.
I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit
DL	Method Detection Limit
MCL	Maximum Contaminant Level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

No results have been blank subtracted unless specified in the case narrative section.

Sample Receipt Checklist

CLIENT NAME: Western + Sampson **RECEIVED BY:** CM **DATE:** 1/6/17

1) **Was the chain(s) of custody relinquished and signed?** Yes ✓ No ____ No COC Incl.

2) **Does the chain agree with the samples?** Yes ✓ No ____
If not, explain:

3) **Are all the samples in good condition?** Yes ✓ No ____
If not, explain:

4) **How were the samples received:**
On Ice ✓ Direct from Sampling ____ Ambient ____ In Cooler(s) ✓ (2)

Were the samples received in Temperature Compliance of (2-6°C)? Yes ✓ No ____ N/A ____

Temperature °C by Temp blank ____ Temperature °C by Temp gun 2.0 + 4.4°C

5) **Are there Dissolved samples for the lab to filter?** Yes ____ No ✓
Who was notified ____ Date ____ Time ____

6) **Are there any RUSH or SHORT HOLDING TIME samples?** Yes ____ No ✓
Who was notified ____ Date ____ Time ____

7) **Location where samples are stored:** Log in

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: ____

8) **Do all samples have the proper Acid pH:** Yes ✓ No ____ N/A ____

9) **Do all samples have the proper Base pH:** Yes ____ No ____ N/A ✓

10) **Was the PC notified of any discrepancies with the CoC vs the samples:** Yes ____ N/A ✓

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber	14	16 oz amber	
500 mL Amber		8 oz amber/clear jar	
250 mL Amber (8oz amber)		4 oz amber/clear jar	
1 Liter Plastic		2 oz amber/clear jar	
500 mL Plastic		Plastic Bag / Ziploc	
250 mL plastic		SOC Kit	
40 mL Vial - type listed below		Perchlorate Kit	
Colisure / bacteria bottle		Flashpoint bottle	
Dissolved Oxygen bottle		Other glass jar	
Encore		Other	

40 mL vials: # HCl ____ # Methanol ____
Bisulfate ____ # DI Water ____
Thiosulfate ____ Unpreserved ____

Any False statement will be brought to the attention of Client

Question	Answer (True/False) T/F/NA	Comment
1) The cooler's custody seal, if present, is intact.	NA	
2) The cooler or samples do not appear to have been compromised or tampered with.	T	
3) Samples were received on ice.	T	
4) Cooler Temperature is acceptable.	T	
5) Cooler Temperature is recorded.	T	2.0°C + 4.4°C
6) COC is filled out in ink and legible.	T	
7) COC is filled out with all pertinent information.	T	
8) Field Sampler's name present on COC.	T	
9) There are no discrepancies between the sample IDs on the container and the COC.	T	
10) Samples are received within Holding Time.	T	
11) Sample containers have legible labels.	T	
12) Containers are not broken or leaking.	T	
13) Air Cassettes are not broken/open.	NA	
14) Sample collection date/times are provided.	T	
15) Appropriate sample containers are used.	T	
16) Proper collection media used.	T	
17) No headspace sample bottles are completely filled.	T	
18) There is sufficient volume for all requsted analyses, including any requested MS/MSDs.	T	
19) Trip blanks provided if applicable.	NA	
20) VOA sample vials do not have head space or bubble is <6mm (1/4") in diameter.	NA	
21) Samples do not require splitting or compositing.	T

Affirmative response to Questions A throughF is required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	☑ Yes	☐ No[1]
B	Were the analytical method(s) and all associated QC requirements specificed in the selected CAM protocol(s) followed?	☑ Yes	☐ No[1]
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	☑ Yes	☐ No[1]
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, Quality Assurance and Quality Control Guidlines for the Acquisition and Reporting of Analytical Data?	☑ Yes	☐ No[1]
E a	VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	☑ Yes	☐ No[1]
E b	APH and TO-15 Methods only: Was the complete analyte list reported for each method?	☐ Yes	☐ No[1]
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all No responses to Qestions A through E)?	☑ Yes	☐ No[1]

A response to questions G, H and I below is required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	☑ Yes	☐ No[1]

***Data User Note:* Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.**

H	Were all QC perfomance standards specified in the CAM protocol(s) achieved?	☑ Yes	☐ No[1]
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	☐ Yes	☑ No[1]

[1] *All Negative responses must be addressed in an attached Environmental Laboratory case narrative.*

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 05/18/2018 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 05/18/2018 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

NORTH AMERICAN PHILL	***100 WESTERN AVENUE***	***WSW 1/4 - 1/2 (0.253 mi.)***	***S56***	***302***

Federal RCRA generators list

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 3 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State and tribal registered storage tank lists

MA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Protection's Summary Listing of all the Tanks Registered in the State of Massachusetts.

A review of the MA UST list, as provided by EDR, and dated 04/18/2018 has revealed that there are 6 MA UST sites within approximately 0.25 miles of the target property.

State and tribal institutional control / engineering control registries

MA INST CONTROL: Activity and Use Limitations establish limits and conditions on the future use of contaminated property, and therefore allow cleanups to be tailored to these uses.

A review of the MA INST CONTROL list, as provided by EDR, and dated 04/18/2018 has revealed that

there are 21 MA INST CONTROL sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal Brownfields sites

MA BROWNFIELDS: Under Massachusetts law, M.G.L. c. 21E is the statute that governs the cleanup of releases of oil and/or hazardous material to the environment. The Brownfields Act of 1998 amended M.G.L. c. 21E by establishing significant liability relief and financial incentives to spur the redevelopment of brownfields, while ensuring that the Commonwealth's environmental standards are met. Most brownfields are redeveloped with the benefit of liability protections that operate automatically under M.G.L. c. 21E.

A review of the MA BROWNFIELDS list, as provided by EDR, has revealed that there are 2 MA BROWNFIELDS sites within approximately 0.5 miles of the target property.

Local Brownfield lists

US BROWNFIELDS: The EPA's listing of Brownfields properties from the Cleanups in My Community program, which provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

A review of the US BROWNFIELDS list, as provided by EDR, and dated 03/19/2018 has revealed that there are 2 US BROWNFIELDS sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/01/2018 has revealed that there are 2 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
BOSTON GAS CO	436 LYNNWAY	WSW 1/4 - 1/2 (0.493 mi.)	AI114	636

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 6 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

Environmental Interest/Information System

OLYMPIC AUTO BODY INC OF LYNN (Continued) **1004716536**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110003448350

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D006
. Waste name: CADMIUM

. Waste code: D008
. Waste name: LEAD

. Waste code: D009
. Waste name: MERCURY

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS

NORTH AMERICAN PHILLIPS LIGHTING (FORMER) (Continued) **1000286363**

CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F009
. Waste name: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.

. Waste code: U019
. Waste name: BENZENE (I,T)

. Waste code: U102

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D003
. Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF

NORTH AMERICAN PHILLIPS LIGHTING (FORMER) (Continued) **1000286363**

DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Used oil transfer facility: No
Used oil transporter: No

Violation Status: No violations found

FINDS:

Registry ID: 110003419382

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

MA-EPICS - Massachussetts Environmental Protection Integrated Computer System

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

BROWNFIELDS: Completed Brownfields Covenants Listing

Under Massachusetts law, M.G.L. c. 21E is the statute that governs the cleanup of releases of oil and/or hazardous material to the environment. The Brownfields Act of 1998 amended M.G.L. c. 21E by establishing significant liability relief and financial incentives to spur the redevelopment of brownfields, while ensuring that the Commonwealth's environmental standards are met. Most brownfields are redeveloped with the benefit of liability protections that operate automatically under M.G.L. c. 21E.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 01/03/2018
Date Data Arrived at EDR: 02/14/2018
Date Made Active in Reports: 03/22/2018

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

LYNN HERITAGE STATE PARK
154 LYNNWAY
LYNN, MA 01902

TARGET PROPERTY COORDINATES

Latitude (North):	42.458733 - 42° 27' 31.44''
Longitude (West):	70.94365 - 70° 56' 37.14''
Universal Tranverse Mercator:	Zone 19
UTM X (Meters):	340185.6
UTM Y (Meters):	4702327.0
Elevation:	2 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5642638 LYNN, MA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

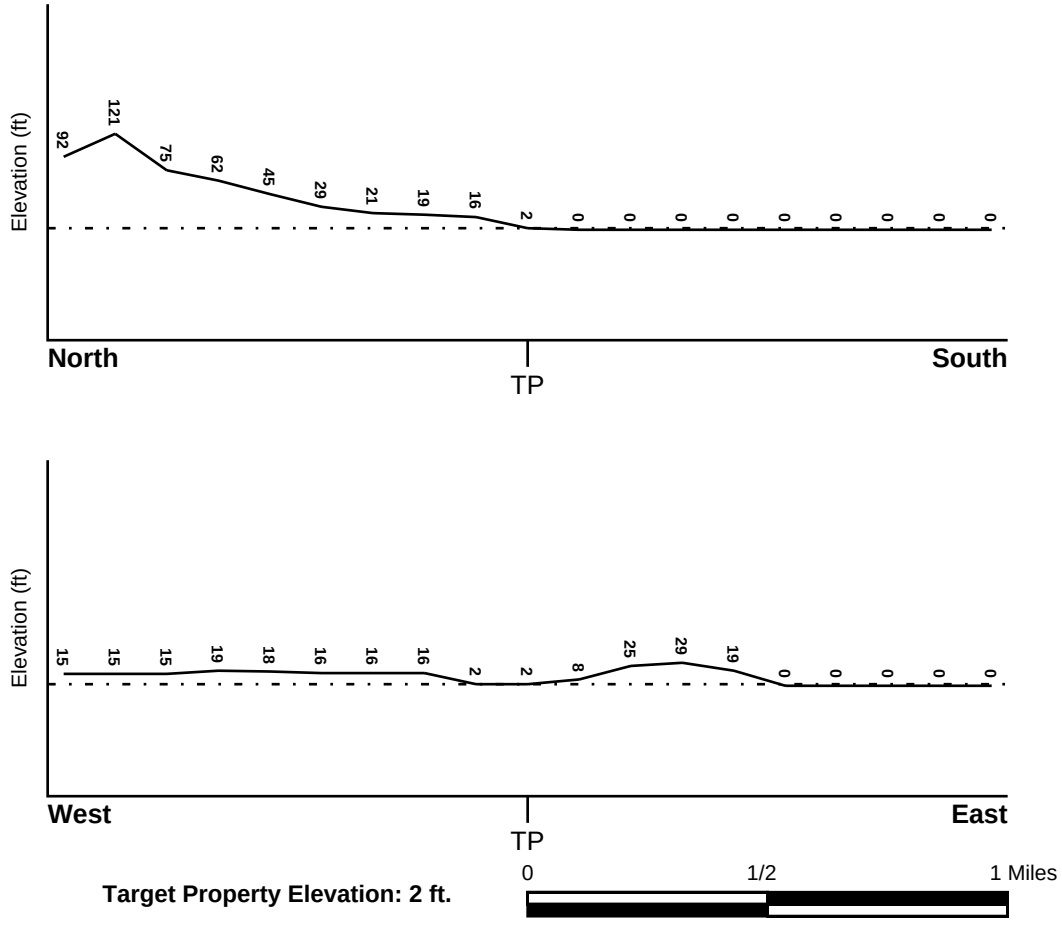
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 2 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
25009C0529G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
25009C0527F	FEMA FIRM Flood data
25009C0531G	FEMA FIRM Flood data
25009C0533G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
WEST HALF OF LYNN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
2	1/4 - 1/2 Mile West	VARIES
1G	1/4 - 1/2 Mile West	VARIES

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: MassDEP
Telephone: 617-292-5907

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Massachusetts Geographic Information System (MassGIS) Datalayers
Source: Executive Office of Environmental Affairs

Public Water Supply Database: The Public Water Supply datalayer contains the locations of public community surface and groundwater supply sources and public non-community supply sources as defined in 310 CMR 22.00.

OTHER STATE DATABASE INFORMATION

Areas of Critical Environmental Concern Datalayer: The Areas of Critical Environmental Concern (ACEC) datalayer shows the location of areas that have been designated ACECs by the Secretary of Environmental Affairs. ACEC designation requires greater environmental review of certain kinds of proposed development under state jurisdiction within the ACEC boundaries. The ACEC Program is administered by the Department of Environmental Management (DEM) on behalf of the Secretary of Environmental Affairs. The Massachusetts Coastal Zone Management (MCZM) Office managed the original Coastal ACEC Program from 1978 to 1993, and continues to play a key role in monitoring coastal ACECs. Procedures for ACEC designation and the general policies governing the effects of designation are contained in the ACEC regulations (301 CMR 12.00). The ACEC datalayer has been compiled by MCZM and DEM and includes both coastal and inland areas.

EPA Designated Sole Source Aquifers Datalayer: The Sole Source Aquifer datalayer was compiled by the Department of Environmental Protection (DEP) Division of Water Supply (DWS). Seven Sole Source Aquifers have been designated by the US Environmental Protection Agency (EPA) for Massachusetts. A Sole Source Aquifer (SSA) is an aquifer designated by US EPA as the sole or principal source of drinking water for a given aquifer service area; that is, an aquifer which is needed to supply 50% or more of the drinking water for that area and for which there are no reasonably available alternative sources should that aquifer become contaminated. The aquifers were defined by a EPA hydrogeologist.

Aquifers Datalayer: MassGIS produced an aquifer datalayer composed of 20 individual panels, generally based on the boundaries of the major drainage basins. Areas of high and medium yield were mapped. This datalayer includes polygon attribute coding to help in the identification of areas in which cleanup of hazardous waste sites must meet drinking water standards, as defined in the Massachusetts Contingency Plan (MCP) (310 CMR 40.00000).

Non-Potential Drinking Water Source Areas: Non-Potential Drinking Water Source Areas (NPDWSA) are regulatory in nature, representing one of many considerations used in determining the standards to which ground water must be cleaned in the event of a release of oil or hazardous material. NPDWSAs are not based on existing water quality and do not indicate poor ambient conditions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

DEP Approved Zone IIs Datalayer: The Department of Environmental Protection (DEP) approved Zone IIs datalayer was compiled by the DEP Division of Water Supply (DWS). The database contains 281 approved Zone IIs statewide. As stated in 310 CMR 22.02, a Zone II is "that area of an aquifer which contributes water to a well under the most severe pumping and recharge conditions that can be realistically anticipated (180 days of pumping at safe yield, with no recharge from precipitation.) It is bounded by the groundwater divides which result from pumping the well and by the contact of the aquifer with less permeable materials such as till or bedrock. In some cases, streams or lakes may act as recharge boundaries. In all cases, Zone IIs shall extend up gradient to its point of intersection with prevailing hydrogeologic boundaries (a groundwater flow divide, a contact with till or bedrock, or a recharge boundary)." These data are used in association with the Public Water Supplies datalayer. The following describes certain unique features of this association.

- Any proposed new well which will pump at least 100,000 gallons per day must have a Zone II delineation completed and approved by DEP prior to the well coming on line.
- Additionally, a new source may not be on-line yet, but other, older wells may fall within its Zone II boundary.
- Further, existing wells must have a Zone II delineated as a condition of receiving a water withdrawal permit under the Water Management Act.

RADON

State Database: MA Radon
Source: Department of Health
Telephone: 413-586-7525
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

Soil Laboratory Results

PHOENIX
Environmental Laboratories, Inc.

Monday, October 22, 2018

Attn: Mr Joseph Salvetti
Stantec
400 Crown Colony Drive
Suite 200
Quincy MA 02169

Project ID: HERITAGE PARK
Sample ID#s: CB71362 - CB71369

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

Phyllis Shiller
Laboratory Director

Parameter	Result	RL/ PQL	Units	Dilution	Date/Time	By	Reference

7 = This parameter is not certified by MA for this matrix.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C22 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

VPH:
*1 Range data exclude concentrations of any surrogate(s) and/or Internal stds eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbons.

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above. Passed is >140 degree F.

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide. This method is no longer listed in the current version of SW-846.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Sulfide. This method is no longer listed in the current version of SW-846.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services.

Parameter	Result	RL/ PQL	Units	Dilution	Date/Time	By	Reference

7 = This parameter is not certified by MA for this matrix.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C22 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above. Passed is >140 degree F.

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide. This method is no longer listed in the current version of SW-846.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Sulfide. This method is no longer listed in the current version of SW-846.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services.
This report must not be reproduced except in full as defined by the attached chain of custody.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

VPH:
*1 Range data exclude concentrations of any surrogate(s) and/or Internal stds eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbons.

Results are reported on an ``as received`` basis, and are not corrected for dry weight.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services.
This report must not be reproduced except in full as defined by the attached chain of custody.

Parameter	Result	RL/ PQL	Units	Dilution	Date/Time	By	Reference

7 = This parameter is not certified by MA for this matrix.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C22 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above. Passed is >140 degree F.

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide. This method is no longer listed in the current version of SW-846.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Sulfide. This method is no longer listed in the current version of SW-846.

TPH Comment:
**Petroleum hydrocarbon chromatogram contains a multicomponent hydrocarbon distribution in the range of C16 to C36. The sample was quantitated against a C9-C36 alkane hydrocarbon standard.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

VPH:
*1 Range data exclude concentrations of any surrogate(s) and/or Internal stds eluting in that range.
*2 C5-C8 and C9-C12 Aliphatic exclude the conc. of Target Analytes in that range.
*3 C9-C12 Aliphatic also exclude C9-C10 Aromatic Hydrocarbons.

Results are reported on an ``as received`` basis, and are not corrected for dry weight.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services.
This report must not be reproduced except in full as defined by the attached chain of custody.

Parameter	Result	RL/ PQL	Units	Dilution	Date/Time	By	Reference

7 = This parameter is not certified by MA for this matrix.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C22 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above. Passed is >140 degree F.

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide. This method is no longer listed in the current version of SW-846.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Sulfide. This method is no longer listed in the current version of SW-846.

TPH Comment:
**Petroleum hydrocarbon chromatogram contains a multicomponent hydrocarbon distribution in the range of C10 to C36. The sample was quantitated against a C9-C36 alkane hydrocarbon standard.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services.

7 = This parameter is not certified by MA for this matrix.

RL/PQL=Reporting/Practical Quantitation Level ND=Not Detected BRL=Below Reporting Level
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

MAEPH:
1* Hydrocarbon range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range.
2* C11-C22 Aromatic Hydrocarbons exclude the concentration of Target PAH analytes eluting in that range.

Corrosivity is based solely on the pH analysis performed above.

Ignitability is based solely on the results of the closed cup flashpoint analysis performed above. Passed is >140 degree F.

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Cyanide. This method is no longer listed in the current version of SW-846.

The reactivity, reported above, is based only on the EPA Interim Guidance for Reactive Sulfide. This method is no longer listed in the current version of SW-846.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services.
This report must not be reproduced except in full as defined by the attached chain of custody.

Comment:

Additional 8270 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is at least 10%. (Acid surrogates acceptance range for aqueous samples: 10-110%, for soils 30-130%)

l = This parameter is outside laboratory LCS/LCSD specified recovery limits.
m = This parameter is outside laboratory MS/MSD specified recovery limits.
r = This parameter is outside laboratory RPD specified recovery limits.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

RPD - Relative Percent Difference
LCS - Laboratory Control Sample
LCSD - Laboratory Control Sample Duplicate
MS - Matrix Spike
MS Dup - Matrix Spike Duplicate
NC - No Criteria
Intf - Interference

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

October 22, 2018 SDG I.D.: GCB71362

The following analysis comments are made regarding exceptions to criteria not already noted in the Analysis Report or QA/QC Report:

SVOA Narration

CHEM07 10/15/18-1: CB71362, CB71364, CB71366, CB71368, CB71369

The following Initial Calibration compounds did not meet RSD% criteria: 2,4-Dinitrophenol 28% (20%)
The following Initial Calibration compounds did not meet maximum RSD% criteria: None.
The following Initial Calibration compounds did not meet recommended response factors: 2-Nitrophenol 0.095 (0.1), Hexachlorobenzene 0.067 (0.1)
The following Initial Calibration compounds did not meet minimum response factors: None.

The following Continuing Calibration compounds did not meet % deviation criteria: Hexachlorobenzene 37%H (30%)
The following Continuing Calibration compounds did not meet Maximum % deviation criteria: None.
The following Continuing Calibration compounds did not meet recommended response factors: Hexachlorobenzene 0.092 (0.1)
The following Continuing Calibration compounds did not meet minimum response factors: None.

Up to eight compounds can be outside of ICAL %RSD criteria and up to sixteen compounds can be outside of CCAL %Dev criteria if less than 40%.

VOA Narration

CHEM26 10/14/18-2: CB71362, CB71363, CB71365, CB71367

The following Initial Calibration compounds did not meet RSD% criteria: trans-1,4-dichloro-2-butene 21% (20%)
The following Initial Calibration compounds did not meet maximum RSD% criteria: None.

Up to eight compounds can be outside of ICAL %RSD criteria and up to sixteen compounds can be outside of CCAL %Dev criteria if less than 40%.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Contact: Andrew Martzolf

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Stantec were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Stantec were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Contact: Andrew Martzolf

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Search Results:

Year	*Scale*	*Details*	*Source*
2016	1"=500'	Flight Year: 2016	USDA/NAIP
2012	1"=500'	Flight Year: 2012	USDA/NAIP
2008	1"=500'	Flight Year: 2008	USDA/NAIP
1995	1"=500'	Acquisition Date: March 29, 1995	USGS/DOQQ
1986	1"=500'	Flight Date: April 01, 1986	USDA
1978	1"=500'	Flight Date: April 23, 1978	USGS
1970	1"=500'	Flight Date: October 29, 1970	USDA
1969	1"=500'	Flight Date: April 09, 1969	USGS
1960	1"=500'	Flight Date: May 01, 1960	USGS
1955	1"=500'	Flight Date: December 01, 1955	USGS
1952	1"=500'	Flight Date: August 26, 1952	USDA
1938	1"=500'	Flight Date: November 16, 1938	USGS
